Modern oculofacial plastic surgery as a field is quite young, with the majority of the literature and leaders in the field developing since the 1950s. As such, the body of literature is quite small compared to other fields. Currently, there is no unified source where readers can learn about the core manuscripts that drive clinical decision-making and influence thought. This book gathers over 50 foundational studies in the oculoplastics field and provides commentary on each study. Discussion of each study includes the abstract, in-depth commentary on the strengths, limitations, and implications of each paper, and guidance for further reading on the topic with a brief review. A short remark by an author from the paper will provide additional color commentary on the inspirations and challenges involved in conceiving and conducting the study. Foundational Papers in Oculoplastics is relevant for anyone who is interested in oculoplastics (ophthalmologists, oncologists, plastic surgeons, etc.) and provides a nice overview of the field with interesting personal anecdotes from those who helped establish it. This issue of Facial Plastic Surgery Clinics, guest edited by Drs. John B. Holds and Guy Massry, is dedicated to Oculoplastic Surgery. This series is one of four selected each year by the series consulting editor, Dr. J. Reagan Thomas. Topics will include—but are not limited to—Brow lift: open approaches, Brow lift: endoscopic approach, Upper blepharoplasty, Blepharoptosis repair: external aponeurotic repair, Blepharoptosis repair: internal approach, Lower blepharoplasty: external approach, Canthoplasty techniques, Lower blepharoplasty: transconjunctival approach, Treatment of lower eyelid festoons, Dermal fillers as an alternative to lower blepharoplasty surgery, Misuse and complications of periocular dermal fillers, Autogenous fat transfer in revision periocular surgery, Surgical treatment of post-blepharoplasty lower eyelid retraction, and the prominent eye: what to watch-out for. Frontalis suspension is a commonly used surgery that is indicated in patients with droopy eyelids (blepharoptosis) and poor levator muscle function. The surgery is based on connecting the tarsal plate of the droopy eyelid to the frontalis muscle with various slings made either from fascia lata tissue or synthetic materials. However, one of the main complications of this surgery is the high rate of blepharoptosis recurrence, which has been reported for some slings as high as 100%. We initiated a collaborative multidisciplinary research to explore the effect of choice of sling material on this common problem. Two

different experimental setups for testing the behavior of various sling materials in-vitro have been developed. Using our first experimental setup, we explored possible gradual permanent elongation of sling materials due to cyclic loading caused by eye blinking. In addition, a more sophisticated second experimental setup was developed to investigate fatigue behavior of different implants under physiologically relevant conditions. We could show that physical changes such as permanent elongation, and holding load drop in the slings could happen under fatigue conditions caused by eye blinking. These changes can contribute to the failure of the frontalis suspension slings and recurrence of blepharoptosis. Our experiments show that different sling materials exhibit significantly different responses. The results of the present study indicate that characterizing the in vitro fatigue behavior of different sling materials can lead to a better understanding of what causes high recurrence rates in frontalis suspension. The characterization methods developed can also be used to improve material selection as well as assist in the development of new materials for this procedure. "There is an apocryphal story of an eminent neurology professor who was asked to provide a differential diagnosis. He allegedly quipped: "I can't give you a differential diagnosis. If you wish I will give you a list of wrong diagnoses followed by the right diagnosis." Sadly, this sort of arrogance pervaded our field, particularly in the era before there were accurate diagnostic methods and effective treatments of neurological diseases. Fortunately, this sort of pomposity is now relegated to the past and remains only as an antique reminder of a type of hubris that precluded discovery and progress in diseases of the nervous system"-- This second edition of *Radiotherapy of Intraocular and Orbital Tumors* provides up-to-date information on the diagnosis and treatment of cancers of the eye and orbit. Important chapters from the first edition have been revised and thus provide, for example, the most recent data with respect to retinoblastoma, rhabdomyosarcoma, and melanoma. In addition, there are a number of chapters by new contributors, so that this edition has a more broadly based, international character. The volume outlines the presenting signs and symptoms of the various tumors and analyzes the indications for ultrasonography, computed tomography, and magnetic resonance imaging studies. It describes in detail treatment techniques and their results with respect to survival and local tumor control, paying special attention to multimodality therapy. Particle beam irradiation and plaque therapy are reviewed, and chemotherapy and heat treatment are also discussed. Potential complications of radiotherapy are described, and relevant information is provided on the conservative and surgical management of radiation effects. The book emphasizes the need for a holistic approach to the patient that recognizes the wider role of irradiation of the eye now that more careful treatment planning is possible. This revised edition will be a valuable asset to all ophthalmologists, radiation oncologists, pediatricians, endocrinologists, oncologists, and residents in training, as well as to students in these disciplines. Based on feedback, the authors have streamlined their bestselling reference to zero in on just the clinical answers ophthalmologists need in day-to-day practice. This new edition presents unparalleled guidance on nearly every ophthalmic condition and procedure. *Surgery of the Eyelids, Lacrimal System, and Orbit*, second edition is a richly illustrated text of oculofacial plastic surgery, with contributions from over 50 nationally and internationally recognized expert authors. Extensively updated from the first edition, this comprehensive text details the evaluation and surgical management of conditions ranging from basic functional eyelid malpositions to complex aesthetic facial reconstructions. It is an excellent resource for those in training as well as seasoned practitioners wanting to be updated on the newest techniques in eyelid, lacrimal, and orbital surgery. The added section in aesthetic surgery includes both surgical and nonsurgical techniques for facial rejuvenation such as botulinum toxin injections, facial fillers, and chemical and laser resurfacing. With over 350 figures, the reader will be able to gain an in-depth understanding and step-by-step instruction of basic and advanced oculofacial plastic surgical procedures. The recognized expert contributing authors provide readers with trusted insight into new and advanced surgical techniques. The text is intuitively organized into functional sections including eyelid malpositions, eyelid reconstruction, lacrimal surgery, orbital surgery, and aesthetic facial surgery. Topics include eyelid lacerations and acute adnexal trauma, clinical presentation of eyelid lesions, management of periocular neoplasms, reconstruction of the lower eyelid, reconstruction of the upper eyelid, reconstruction of canthal defects, management of entropion and trichiasis, management of ectropion and floppy eyelids, management of blepharoptosis, management of eyelid retraction, management of blepharospasm and hemifacial spasm, management of facial palsy, evaluation of the lacrimal system, management of pediatric nasolacrimal duct obstruction, surgery of the lacrimal system, orbital and periorbital fracture, evaluation & spectrum of orbital disease, surgical exploration of the orbit, surgical decompression

of the orbit, optic nerve sheath decompression, management of orbital cellulitis, enucleation and evisceration, orbital Exenteration, complications of the anophthalmic socket, rejuvenation of the forehead and eyebrows, upper eyelid blepharoplasty, lower eyelid and midfacial rejuvenation, chemical and laser resurfacing of the eyelids and face, botulinum toxin injections for facial rhytids, soft tissue fillers for facial aesthetics, and face-lifting techniques. This book details the surgical techniques of Dr. Francoise Firmin, a recognized thought leader in auricular surgery. It contains her "trade secrets" that have been distilled over many years of practice and is abundantly illustrated with over 1000 colour photographs and drawings. The book includes operative and lecture video plus an eBook. This practical, authoritative book will be an essential purchase to all surgeons who operate on the ear.

gt; Thorough, up to date, and unique in the field, Comprehensive Textbook of Eyelid Disorders and Diseases, by Drs. Jonathan J. Dutton, Hatem A. Tawfik, and Alan D. Proia, offers a complete up-to-date review of the most common eyelid disorders. In 147 chapters, the authors provide highly illustrated discussions of each condition, suitably detailed for ophthalmologists working in oculoplastics, neuro-ophthalmology, and pediatrics, as well as facial surgeons, dermatologists, and dermatopathologists. Instead of identifying class notebooks by color choose a unique cover design. This is a great notebook for medical, life science, & biology lab, lecture, and residency notes. Makes a unique gift for a birthday, graduation, holiday, thank you or back to school!

Cover: Soft matte non-reflective paper cover offers a muted look with a smooth velvety texture. Dimensions: 7.44 x 9.69 in (18.898 x 24.613 cm) Interior: 160 pages printed on 60# paper. Nice quality paper works well with many types of writing tools including ball point pens, gel pens, felt tip pens, and pencils. Binding: High quality perfect (won't lay flat) paperback binding. This "one-stop" resource presents all of the information needed to identify and treat orbital fractures. A multidisciplinary team of specialists covers everything from normal orbital anatomy...through patient evaluation and diagnostic imaging...to the latest reconstructive materials and techniques for any type of orbital trauma. The result is an outstanding source of complete, balanced, and authoritative guidance to help readers achieve the best outcomes. Presents uncommonly well-rounded coverage from an impressive roster of leading ophthalmologists - otorhinolaryngologists - oral and maxillofacial surgeons - neurosurgeons - plastic surgeons - and radiologists. Delivers step-by-step guidelines on today's full range of bone and cartilage graft harvesting, grafting, and fixation techniques - alloplastic plating approaches - and surgical procedures, as well as management of soft tissue injuries. Addresses ophthalmic and facial complications and discusses how to avoid them. With more than 50 additional contributors. This well-illustrated book presents the latest diagnostic concepts and management techniques in the rapidly expanding subspecialty of pediatric oculofacial plastic surgery. Covering all aspects of the field and taking into account numerous surgical innovations and exciting new medical treatment concepts that have emerged since publication of the previous edition in 2002, Pediatric Oculoplastic Surgery, 2nd Edition will prove to be an invaluable resource for both the comprehensive ophthalmologist and the subspecialist with a particular interest in pediatric disorders of the eyelids, orbit, and nasolacrimal system. Topics discussed, in addition to clearly illustrated basic oculoplastic procedures, include surgical innovations ranging from the Sonopet system for safer removal of bone in lacrimal surgery to the development of complex image guidance technology for sinus and orbital surgery. Detailed discussion of syndromic and non-syndromic congenital anomalies explore a variety of surgical techniques and the nuances of applying these approaches in the management of various structural abnormalities. Further important advances include new analytic laboratory techniques, which can illuminate the genetic basis of many pediatric oculoplastic disorders, various medical management advances such as the role of beta blockers in the treatment of facial and orbital hemangiomas, and the development of biologic pathway blockers inhibiting tumor growth which offer real potential for reducing the necessity of surgical intervention. Facial Plastic and Reconstructive Surgery is a comprehensive and practical guide to performing facial surgical procedures, and contains a balance of aesthetic and reconstructive procedures that mirrors typical European practice. It has arisen as an initiative of the European Academy of Facial Plastic Surgery (EAFPS), and in accordance with this status is a comprehensive book that gives a complete update on the speciality as it is practised in Europe. The contributors have many years of clinical practice as well as research experience in facial plastic and reconstructive surgery. The book's practical 'how-to' style is amply supported with excellent line illustrations and colour photographs, and serves as a comprehensive reference for surgeons in clinical practice as well as in training. Each chapter is structured within a uniform framework to increase the accessibility of the text, and in this way improves the book's utility as a textbook for trainees.

Cosmetic Surgery: Art and Techniques is an atlas of general cosmetic surgery that provides precise step-by-step descriptions of the full range of techniques, supported by photographs and illustrations of the highest standard. The book is comprehensive in its scope, covering the diverse procedures performed on the head and neck, breast, abdomen, buttocks, and extremities as well as other techniques such as labioplasty, penile enhancement, and total body lift. Risks and complications are fully explained, with clear advice on how to avoid and to treat them. All of the contributors are internationally recognized experts with extensive knowledge of their subject. This book will be of value to beginners, and experienced practitioners in not only cosmetic surgery but also plastic surgery, general surgery, oral maxillofacial surgery, neurosurgery, dermatology, otolaryngology, and ophthalmology. Whether from trauma, congenital deformity, or disease, many patients can present with disfiguring and debilitating facial defects. This reference presents a range of expertise on soft-tissue surgery of the craniofacial region for improved function and enhanced cosmetic appearance. Covering the latest technologies available, this source includes cha Minimally invasive aesthetic procedures are an important part of dermatologists' day-to-day clinical routine. However, plastic surgeons are also becoming more willing to explore them, and minimally invasive cosmetic and aesthetic procedures are now an established interdisciplinary topic. Minimally Invasive Aesthetic Procedures - A Guide for Dermatologists and Plastic Surgeons addresses the needs of both these specialties. It provides a comprehensive overview of the most relevant and widely used minimally invasive procedures, presented in a practical and straightforward style. Rather than a broad overview of the literature, it offers a step-by-step guide to clinical procedures. Each chapter explores a single clinical procedure, discussing the theoretical basis; the materials needed; the methods and techniques; clinical follow-up; before-and-after illustrations; as well as the side effects and complications and their management. It also includes a summary of tips and relevant references. With more than a hundred procedures presented and discussed in a clinically applicable format, Minimally Invasive Aesthetic Procedures - A Guide for Dermatologists and Plastic Surgeons is a practical manual for all dermatology and plastic surgery practitioners who are interested in aesthetic medicine. Traditionally, professional medical and surgical society meetings, journals, and texts are single-specialty driven to accommodate specific specialists with information most important to them. A consequence of this structure is that it can create an unintentional and artificial barrier to sharing knowledge that can benefit patient outcomes. Cosmetic and reconstructive surgeons, more than ever, are seeking to know what other specialists are doing. This publication, the first of a series, focuses on the brow and upper eyelid rejuvenation and presents varied and complementary techniques from the core specialties of Plastic surgery, Oculoplastic surgery, Facial plastic surgery, and Dermatology to address all aspects of rejuvenation procedures of the upper face. Surgical and non-invasive techniques are presented concisely, focusing on time-tested as well as novel procedures. The most talented and accomplished subspecialists in their respective fields provide insights into such topics as Preoperative Evaluation for the Upper Eyelid and Brow; Aesthetic Enhancements in Upper Blepharoplasty; Asian Upper Lid Blepharoplasty; Prevention and Intraoperative Management of Blepharoplasty Complications; Ptosis Repair in Aesthetic Blepharoplasty; Adjunctive Fat Grafting of the Brow/Upper Lid; The Open Brow Lift; Adjunctive Skin Care of the Brow and Upper Lid; among many others. Specific techniques, Patient perspective and goals, and clear anatomic descriptions are presented with each procedure, with several offering technique videos. Guest editors Babak Azizzadeh and Guy Massry strongly believe that, with more and varied practitioners with different training taking on cosmetic and reconstructive surgeries or procedures, transparency of information is essential in order to expose the best information to all practitioners of this art and science. Seldom does a book achieve status as a classic in its first edition, but The Art of Aesthetic Surgery by Foad Nahai has been hailed as a masterpiece since its inception. Reviews have been universally laudatory, and residents and experienced practitioners alike have embraced this work as the ultimate resource on all things aesthetic. Now, this landmark work has been totally revised and updated with over 40 new chapters (many with new authors) and every chapter has been revised to reflect the latest trends, techniques, and information. This three-volume set also includes seven DVDs with 24 operative videos. Comprehensive Coverage 93 chapters in three volumes cover the full range of cosmetic medical treatments and aesthetic operations. Topics include: Hair transplantation and brow lift Eyelid surgery Laser resurfacing and chemical peels Tissue fillers and fat grafting Rhytidectomy and face and neck lift Facial implants Rhinoplasty and ptoplasty Lip rejuvenation Breast augmentation, reduction, and mastopexy Surgical, noninvasive, and minimally invasive body

contouring Liposuction To address the modern physician's need for business acumen as well as surgical skill, three chapters focus on practice management, ranging from practice model options, staff and financial management, marketing and communications, and legal issues. World-Renowned Authors Dr. Foad Nahai is an acknowledged leader in aesthetic surgery. He has personally written a third of the chapters for this three-volume work. His contributors, representing the "who's who" of aesthetic surgery, provide detailed accounts of their techniques for the different operations, as well as the planning process so crucial to producing excellent results. Help with Decision-Making Of particular note are the clinical decision-making chapters authored by Dr. Nahai. This invaluable insight provides readers with a unique overview of the various options for each problem, along with his preferred solutions. Complete with algorithms and case studies, this problem-solving feature offers the expert guidance necessary to sort through options, understand their advantages and limitations, and make the best choice for each patient. Necessary Anatomy Key chapters introducing each major anatomic region or topic area focus on applied anatomy and provide essential information that the surgeon needs to know to execute these surgical maneuvers safely and effectively. Reliable Format This new edition maintains the same features that made the previous edition so popular, including beautiful medical illustrations, large type for readability, and a consistent, comprehensive approach. The semi-atlas format features the applicable images located next to legend text for enhanced clarity. These two volumes of "Surgical Ophthalmology" represent the fruits of a long standing cooperation among a number of experts in the various subspecialties of ophthalmology. The editors have attempted to harmonize the individual contributions. The illustrations are of a more or less uniform character and present in didactic sketches the individual steps of the most important operations. This should be of benefit not only for the neophyte, but also for the expert. The text has in a similar way been integrated so that the whole work, though written by a number of contributors, presents an organic unit and not a patchwork of different parts. In addition, this work is a monument to the spirit of German-American collaboration. The two German editors have since the end of WWII stressed the advantages of such collaborative efforts. They have established close personal contacts with many American ophthalmologists. They have participated in and contributed to many American congresses, meetings and symposia. The American editor, on the other hand, as a product of the Viennese school, has always stressed the important contributions by German-speaking ophthalmologists and the value of the German literature. This landmark book is the most extensive and complete oculofacial plastic surgery guide available in the market. Updated and broadened from the three previous editions, it includes advances in the use of surgical navigation systems, and new techniques and treatments for diseases involving the eyelid, orbital and lacrimal system. Organized across 11 sections of in-depth, expertly written text, Smith and Nesi's Ophthalmic Plastic and Reconstructive Surgery, Fourth Edition has taken the best of the field's classic reference text and expanded upon it. Detailed chapters cover a multitude of topics relating to various ocular surgeries, pediatric considerations, ocular traumas, and anatomy. Supplemented with a myriad of high-quality illustrations, Smith and Nesi's Ophthalmic Plastic and Reconstructive Surgery, Fourth Edition is an indispensable reference for oculoplastics surgeons and physicians in other fields. Written by an author who has worked at the frontline of ophthalmic nursing care for over 25 years, this is a comprehensive and highly practical guide to the treatment and care of a wide variety of eye conditions, ranging from minor eye irritations to chronic diseases and conditions requiring major surgery. John Cooper draws on many years of experience in theatre, daycase and outpatients as an advanced nurse practitioner and oculoplastic nurse practitioner (and, previously, as a nurse practitioner) to summarise the most important points about every condition the ophthalmic and oculoplastic practitioner is likely to encounter. The book also covers all the latest developments in oculoplastic surgery, oculoprosthetics and the care of the patient with oculoplastic-related issues. Contents include: • Advanced and specialised roles within ophthalmic and oculoplastic nursing in the UK • Entropion and ectropion • Assessment and management of upper eyelid blepharoptosis • Floppy eyelid syndrome • The eyelashes and trichiasis • Blepharitis, meibomian gland disease and dry eyes • The lacrimal system and dacryocystorhinostomy • Thyroid eye disease • Enucleation and evisceration • Exenteration and socket wound management • Emergency oculoplastic care • Facial palsy and related care • The orbit and related disorders • Oculoplastic surgical competencies For the last two decades, this best-selling, step-by-step guide to oculoplastic surgery has been highly respected and widely used by ophthalmologists, oculofacial plastic fellows, residents, ENT-facial plastic surgeons, and general plastic surgeons. The revised and updated fifth edition of Manual of

Oculoplastic Surgery is designed to guide the physician in exploring and completing a variety of ocular plastic procedures in a comprehensive and logical step-by-step sequence. It features new authors. Sections include: Trauma, Lacrimal Surgery, Cosmetic, Congenital Ptosis, Acquired Ptosis, Eyelid Malposition, Facial Nerve Dysfunction, Eyelid Flaps, Orbital Surgery, and Therapeutic Considerations. Each procedure in this must-have resource includes a review of the surgical anatomy, step-by-step instructions, plus the book is complete with more than one hundred color illustrations and dozens of surgical videos for further education. The definitive resource on reconstructive and aesthetic oculofacial surgery Oculoplastic Surgery, Third Edition, by Brian Leatherbarrow, reflects more than 25 years of experience and multidisciplinary collaboration in treating patients with a wide spectrum of oculoplastic, orbital, and lacrimal conditions. The third edition builds on the highly acclaimed prior editions, with expanded coverage of oculofacial surgery procedures and management of complications. The book is pragmatically organized in seven sections and 29 chapters, starting with basic and applied anatomy, followed by procedure-specific sections on eyelid surgery, cosmetic surgery, orbital surgery, lacrimal surgery, anophthalmic socket surgery, and trauma. Updates include an expanded applied anatomy chapter, prevention and management of dermal filler complications, a new approach to the management of patients with acquired blepharoptosis, and the surgical approaches to optic nerve sheath fenestration. Key Features A focus on periocular anatomy and adjacent structures, with in-depth descriptions of applied anatomy for each procedure Discussion of pertinent clinical signs, investigations, surgical indications, important technical considerations, and complications Lavishly illustrated with more than 800 color photos and exceptional computer-generated artist drawings Numerous surgical videos enhance understanding of procedures such as Müller's muscle resection, levator advancement, upper and lower lid blepharoplasty, entropion and ectropion surgery, enucleation of the eye, dermis fat graft harvesting, structural fat grafting, endoscopic dacryocystorhinostomy, Lester Jones tube insertion, temporal direct brow lift, and more Pragmatic and visually stunning, this is a must-have oculoplastic surgery resource for ophthalmologists. Residents and practitioners in plastic surgery, maxillofacial surgery, ENT surgery, dermatology, radiology, and neurosurgery will also greatly benefit from this remarkable resource. This comprehensive text covers both core and advanced principles within oculofacial, orbital, and lacrimal surgery with extensive detail not found in any other current book on the subject. Richly illustrated with hundreds of images, Oculofacial, Orbital, and Lacrimal Surgery: A Compendium is written and edited by international leaders in fields spanning ophthalmology, otolaryngology, oral and maxillofacial surgery, and plastic surgery. Covering topics such as embryology, anatomy, and physiology of the lacrimal system, imaging for orbital diseases and thyroid-related ophthalmology, and flap geometry and planning, this book is an excellent resource for those in training, as well as seasoned clinicians looking to stay current. This book is divided into five sections: Eyelid, Oculofacial, Lacrimal, Orbit, and Socket, with each section containing detailed chapters addressing evaluation, imaging, and various surgical approaches and management. Designed to not only provide an anatomical and surgical guide for all three types of surgeries, but to help physicians avoid mistakes and correct complications of patients referred to them, Oculofacial, Orbital, and Lacrimal Surgery: A Compendium is the definitive, authoritative reference on this complex field. Ptosis is the abnormally low position of the upper eye lid, sometimes known as "lazy eye". If left untreated in infants it can impair the development of vision, and in adults it may be an indicator of muscle weakness, endocrine disease, cancer or poisoning. This comprehensive text and atlas offers ophthalmologists in practise and in training complete coverage of the causes, diagnosis, evaluation and surgical interventions available to remedy this condition. Presented in ten chapters from anatomy and differential diagnoses to surgical interventions, this book shows the latest surgical techniques firstly through line drawings before moving to clinical photographs of the techniques. The book also covers the surgical management of other associated conditions i.e. telecanthus, epicanthus, and ectropion that may need to be managed in conjunction with Ptosis and contains an invaluable list of drugs reported to induce Ptosis and syndromes and diseases associated with the condition. This comprehensive and detailed text deals with the diagnosis and surgery of blepharoptosis, and will benefit any practicing physician, fellow or resident who deals with blepharoptosis. Smith and Nesi's Ophthalmic Plastic and Reconstructive Surgery, Third Edition has taken the best of the field's classic reference text and expanded upon it, continuing its reputation as the foremost guide to the subspecialty. Every practitioner of plastic and reconstructive surgery will find useful information in this comprehensive, in-depth text, including an update on the changes and advances of the last several years and a new section on pediatric consideration.

Detailed chapters on ophthalmic anatomy are also included, as well as sections on eyelid dermatology, socket surgery, and cosmetic surgery. Every consideration has been made by Dr. Nesi and his co-editors to cover every aspect important to the ophthalmic plastic surgeon. Features: Fully updated and revised edition of Smith's Ophthalmic Plastic and Reconstructive Surgery Comprehensive text with detailed chapters that cover all aspects of the subject matter More than 1700 figures and 77 chapters Essentials of Plastic Surgery: Q&A Companion is the companion to Essentials of Plastic Surgery, Second Edition, which covers a wide variety of topics in aesthetic and reconstructive plastic surgery. As such, it is designed to test your knowledge of the source book, which may be helpful in the clinical setting and beyond. It presents both multiple choice questions and extended matching questions in single best answer format. The 1200 questions are carefully constructed to be practical and thorough, and are accompanied by detailed answers that help enhance understanding of both the right and wrong answers. Compact enough to fit in a lab coat pocket, its design and organization allow for quick and easy reading. The print book is accompanied by a complimentary eBook that can be accessed on smartphones and tablets. It is the go-to resource for all students of plastic surgery, whether residents in training or experienced practitioners. The tenth volume of Recent Advances in Ophthalmology contains some selected chapters on cornea, uvea, secondary glaucoma, lens, retina, oculoplastic surgery, and neuro-ophthalmic disorders. First time in the serial publication, three editorials—artificial cornea, diabetic retinopathy, and endophthalmitis are included to provide an over view of the problem to the reader. Recent advances in ophthalmology have considerably improved the quality of medical and surgical management of the patients with eye diseases. Besides editorial on artificial cornea, five articles are included on cornea. Sinha and coauthors have described corneal dystrophies in great detail covering prevalence, international classification, inheritance, histopathology, clinical features and treatment. Hopefully, the postgraduate students in ophthalmology and general ophthalmic practitioners will find the present volume helpful not only in the basic understanding of new developments in the subject but also in day-to-day clinical practice and care of the patients. Written and edited by the world-famous expert G.O.H. Naumann, this textbook delves into the details of ocular structures such as the nuances of morphology, surgical anatomy and pathology. The text covers unique features of intraocular surgery in closed system and open eye contexts. It goes on to cover crucial aspects of restoring the anterior chamber. Then it delineates the spectrum of potential complications in (pseudo-) exfoliation-syndromes as well as the most vulnerable cell populations. Readers are also treated to the features of normal and pathologic wound healing after non-mechanical laser and mechanical inventions. Brilliant artwork and sketches illustrate the complex pathology. Oculoplastic Surgery: A Practical Guide to Common Disorders provides guidance on various clinical approaches for treating oculoplastic disorders as well as ocular trauma. In addition, highly illustrated and informative chapters examine the interaction between oculoplasty, ophthalmic sub-specialties (pediatrics, cataract, refractive, neuro, glaucoma) and other clinical areas including ENT, maxillofacial, dermatology, general plastic surgery and psychiatry. Consultants, surgeons, trainees and health professionals from all the specialties and sub-specialties related to oculoplasty, will find this book to be an indispensable resource for further developing skills and knowledge in the field of oculoplastic surgery. The recognized expert contributing authors provide readers with trusted insight into new and advanced surgical techniques. The text is intuitively organized into functional sections including eyelid malpositions, eyelid reconstruction, lacrimal surgery, orbital surgery, and aesthetic facial surgery. This comprehensive and detailed text deals with the diagnosis and surgery of blepharoptosis, and will benefit any practicing physician, fellow or resident who deals with blepharoptosis.
