Generalist Case Management: A Method of Human Service Delivery Nov 03 2020 This practical text equips students with the fundamental information and skills needed to be effective case managers, covering such central issues as the responsibilities of case management, competencies needed for ethical and multicultural case management, participation in interdisciplinary and interorganizational teams, and engagement in advocacy and leadership. The first-person experience of a client and her case managers draws students into the text. To ensure that the book offers current and accurate information, the authors interviewed human service case managers nationwide about their jobs, skills, challenges, and clients. These interviews, combined with current research and numerous case studies, make GENERALIST CASE MANAGEMENT: A METHOD OF HUMAN SERVICE DELIVERY, 5th Edition, realistic and relevant. The text also aligns with NASW case management standards and helps to prepare students for earning C-SWMC certification and the HS-BCP credential. Arab Spring Dec 25 2019 Beginning in January 2011, the Arab world exploded in a vibrant demand for dignity, liberty, and achievable purpose in life, rising up against an image and tradition of arrogant, corrupt, unresponsive authoritarian rule. These previously unpublished, countryspecific case studies of the uprisings and their still unfolding political aftermaths identify patterns and courses of negotiation and explain why and how they occur. The contributors argue that in uprisings like the Arab Spring negotiation is "not just a 'nice' practice or a

diplomatic exercise." Rather, it is a "dynamically multilevel" process involving individuals, groups, and states with continually shifting priorities--and with the prospect of violence always near. From that perspective, the essays analyze a range of issues and events--including civil disobedience and strikes, mass demonstrations and nonviolent protest, and peaceful negotiation and armed rebellion--and contextualize their findings within previous struggles, both within and outside the Middle East. The Arab countries discussed include Algeria, Bahrain, Egypt, Libya, Morocco, Syria, Tunisia, and Yemen. The Arab Spring uprisings are discussed in the context of rebellions in countries like South Africa and Serbia, while the Libyan uprising is also viewed in terms of the negotiations it provoked within NATO. Collectively, the essays analyze the challenges of uprisers and emerging governments in building a new state on the ruins of a liberated state; the negotiations that lead either to sustainable democracy or sectarian violence; and coalition building between former political and military adversaries. An Unworthy Future Mar 20 2022 It is difficult to find an area of public policy more plagued by misunderstanding than energy policy. Even worse, every time the subject is raised, we are obligated to get mired in pointless

arguments about the weather. This book helps set the record straight. Not convinced? Consider some of these inconvenient truths: The cost of 'green energy' climate remediation is anywhere from 10-to-1,000 times greater than the damage from the climate change it attempts to alleviate. Germany, the world's leader in solar energy, will spend more than \$280 billion by 2030 on solar subsidies. But all of that investment will only forestall 22nd century global warming by 37 hours. Obama's carbon tax would cost Americans \$1.2 trillion over just ten years. But it would only reduce the midrange 3 degree modeled 22nd century global temperature increase by 0.038 degrees Celsius. At their current emissions growth rate, it will take China nine months to replace the entire U.S. emissions cut that Obama wants to achieve over seven years, at a staggering cost in American jobs and lost economic growth. The U.S. biofuel program imposes a cost on consumers 9,862 times greater than any climate benefit they or their distant progeny will ever derive. This is not another skeptical global warming polemic but an economic evaluation of how and why green energy will fail. The world has too many pressing needs. For the money Obama squandered on just a single bankrupt crony solar company, the U.S. could have prevented 300,000 childhood malaria deaths in poor countries. A thoroughly researched, heavily documented book by an expert in his field, it will demonstrate in meticulous detail how wasteful and economically inefficient Obama's 'green energy' dead end future will be compared to other worthy alternatives. It's time to end the hysterical climate cynicism and get on humanity's side.

International Energy Outlook Jul 24 2022 International Outlook 2016, an updated statistical reference with energy projections, is provided as a service to energy managers and analysts, both in government and in the private sector. The projections are used by international agencies, federal and state governments, trade associations, and other planners and decision makers. They are published pursuant to the Department of Energy Organization Act of 1977 (Public Law 95-91), Section 205(c). The report begins with a review of world trends in energy demand and the major macroeconomic assumptions used in deriving the International Energy Outlook 2016 (IEO2016) projections, along with the major sources of uncertainty in the projections, which extend through 2040. In addition to the Reference case projections, High Economic Growth and Low Economic Growth cases were developed to consider the effects of higher and lower growth paths for economic

activity than are assumed in the Reference case. IE02016 also includes a High Oil Price case and, alternatively, a Low Oil Price case. The resulting projections--and the uncertainty associated with international energy projections in general--are discussed in Chapter 1, "World energy demand and economic outlook." Projections for energy consumption and production by fuel--petroleum and other liquid fuels, natural gas, and coal--are presented in Chapters 2, 3, and 4, along with reviews of the current status of each fuel on a worldwide basis. Chapter 5 discusses the projections for world electricity markets--including nuclear power, hydropower, and other marketed renewable energy resources--and presents projections of world installed generating capacity. Chapter 6 presents a discussion of energy used in the buildings sector (residential and commercial). Chapter 7 provides a discussion of industrial sector energy use. Chapter 8 includes a detailed look at the world's transportation energy use. Finally, Chapter 9 discusses the outlook for global energy-related carbon dioxide emissions. IE0 2016 focuses exclusively on marketed energy. Non-marketed energy sources, which continue to play an important role in some developing countries, are not included in the estimates. Customer Experience Management for Water Utilities Jan 24 2020 Customer Experience Management for Water Utilities presents a practical framework for water utilities to become more focussed on their customers. This framework is founded on Service-Dominant Logic, a contemporary theory of marketing that explains value creation as a process of co-creation between the customer and the service provider. Standard models for marketing do not apply to monopolistic water utilities without modification. The first two chapters develop a marketing mix tailored to water utilities to assist them with providing customer-centric services. The water utility marketing mix includes the value proposition, internal marketing, service quality and customer relationships. The book discusses the four dimensions of the marketing mix. Chapter three presents a template for developing value propositions to assist water utilities in positioning their service. This model is based on the needs and wants of individual customer segments and the type of service. Chapter four discusses internal

marketing, activities designed to improve the way utilities add value for customers. This chapter also analyses potential tensions between engineering and science-oriented employees and proposes methods to resolve these tensions. The final chapters describe customer relationships from both a theoretical and practical perspective. The customer experience is a complex phenomenon that is difficult to quantify. The book provides a method to measure the experience of the customer, based on service quality theory and psychometric statistics. *Customer Experience Management for Water Utilities* is one of the first books that discusses urban water supply from a marketing perspective. This perspective provides a unique insight into an industry which is often dominated by technological concerns. This book is a valuable resource for Water Utility Managers and Regulators, as well as for Marketing Consultants seeking to assist water utilities to become more customer focussed.

Business Intelligence and Performance Management Apr 20 2022 During the 21st century business environments have become more complex and dynamic than ever before. Companies operate in a world of change influenced by globalisation, volatile markets, legal changes and technical progress. As a result, they have to handle growing volumes of data and therefore require fast storage, reliable data access, intelligent retrieval of information and automated decision-making mechanisms, all provided at the highest level of service quality. Successful enterprises are aware of these challenges and efficiently respond to the dynamic environment in which their business operates. Business Intelligence (BI) and Performance Management (PM) offer solutions to these challenges and provide techniques to enable effective business change. The important aspects of both topics are discussed within this state-of-the-art volume. It covers the strategic support, business applications, methodologies and technologies from the field, and explores the benefits, issues and challenges of each. Issues are analysed from many different perspectives, ranging from strategic management to data technologies, and the different subjects are complimented and illustrated by

numerous examples of industrial applications. Contributions are authored by leading academics and practitioners representing various universities, research centres and companies worldwide. Their experience covers multiple disciplines and industries, including finance, construction, logistics, and public services, amongst others. Business Intelligence and Performance Management is a valuable source of reference for graduates approaching MSc or PhD programs and for professionals in industry researching in the fields of BI and PM for industrial application.

Do Banks Audited by Specialists Engage in Less Real Activities Management? Evidence from Repurchase Agreements
Mar 27 2020 Prior research documents that non-financial firms resort to more real activities management when their ability to manage accruals is constrained by specialist auditors (e.g., Chi et al. 2011; Burnett et al. 2012). Within the context of banks' real activities management through repurchase agreements (repos), we argue that repo management can increase litigation risk for auditors and, hence, specialist auditors will pay greater attention to repo management and will better constrain the extent of such real activities management than nonspecialists. We find that banks audited by specialists, including both Big 4 and non-Big 4 specialists, are associated with less downward repo deviation than banks audited by non-Big 4 nonspecialists. We also find that banks audited by the joint national and city-level specialists are associated with less downward repo deviation than banks audited by Big

4 nonspecialists.

Policy Analysis in France Aug 25 2022 Understanding policy analysis in France requires first a thorough exploration of the distinction usually made in French academic and practitioner debates between policy studies and policy analysis--essentially the difference between studies of policy and studies designed for the use of policy. This book begins there, then delves into questions of how and by whom knowledge of policies is produced within and outside the French state, showing that while the tension between the two types of study is real, the continued exchange of ideas between them has led to an enrichment of both spheres. The book thus lays the foundation for a more systematic understanding of policy analysis in France.

Policies and Programs for Sustainable Energy Innovations Jan 18 2022 This volume features research and case studies across a variety of industries to showcase technological

innovations and policy initiatives designed to promote renewable energy and sustainable economic development. The first section focuses on policies for the adoption of renewable energy technologies, the second section covers the evaluation of energy efficiency programs and the final section provides evaluations of energy technology innovations. Environmental concerns, energy availability and political pressure have prompted governments to look for alternative energy resources that can minimize the undesirable effects for current energy systems. For example, shifting away from the conventional fuel resources and increasing the percentage of electricity generated from renewable resources, such as solar and wind power, is an opportunity to guarantee lower CO₂ emissions and to create better economic opportunities for citizens in the long run. Including discussions of such of timely topics and issues as global warming, bio-fuels and nuclear energy, the editors and contributors to this book provide a wealth of insights and recommendations for sustainable energy innovations.
