Souls in the Sea Oct 30 2020 Dolphins have long been attributed with intelligence, but do they have souls? Self-awareness? Compassion? Scott Taylor, Director of the Cetacean Studies Institute, investigates the history, mythology, and science surrounding these creatures and emerges with a resounding yes. And not only do whales and dolphins merit our attention and respect in their own right: they are an index to what our future as a species can be. In this multi-faceted cetology

compendium, Taylor surveys the portrayal of dolphins and whales in works of literature as disparate as Moby Dick and Sumerian legend, examines biologist John Lilly's research on interspecies communication, and explores the benefits of dolphin-assisted swimming therapy for disabled children and adults. Looking at the world from the perspective of one of these "souls in the sea," Taylor suggests that cetaceans are an ideal bridge between humanity and nature. Poetically written and thoughtfully illustrated with photos and drawings, *Souls in the Sea* is a comprehensive celebration of the biology, history, and mystique of dolphins and whales.

The Quantum Human Mar 23 2020 Our human energy "blueprint" is in a constant state of flux as we grow and change. As our creative ability expands and our ability to fulfill the potential for a peaceful, just, and sustainable world grows, knowing about the new Global Cycle we're about to enter has never been more important. In *The Quantum Human*, you will learn: What's REALLY happening in the world right now and why there's so much tension and conflict. How the Human Design chart has evolved. New changes in the chart and how you might be impacted. How to be fully aligned with the coming changes. How to deepen your purpose and mission to ensure you do your part in creating a better world. This FULL COLOR edition will also show you how to reprogram your DNA so you can overcome outdated ancestral programming and help your body hold higher energy frequencies. Remember? when you reclaim the truth of who you are, you not only create a life that is worthy of you, you also take your place in service to the world.

50 Great Myths of Human Evolution Jul 19 2022 *50 Great Myths of Human Evolution* uses common misconceptions to explore basic theory and research in human evolution and strengthen critical thinking skills for lay readers and students. Examines intriguing—yet widely misunderstood—topics, from general ideas about evolution and human origins to the evolution of modern humans and recent trends in the field. Describes what fossils, archaeology, and genetics can tell us about human origins. Demonstrates the ways in which science adapts and changes over time to incorporate new evidence and better explanations. Includes myths such as “Humans lived at the same time as dinosaurs;” “Lucy was so small because she was a child;” “Our ancestors have always made fire;” and “There is a strong relationship between brain size and intelligence” Comprised of stand-alone essays that are perfect for casual reading, as well as footnotes and references that allow readers to delve more deeply into topics

Handbook of Research on E-Transformation and Human Resources Management Technologies: Organizational

Outcomes and Challenges Feb 14 2022 Provides practical, situated, and unique knowledge on innovative e-HRM technologies and expands on theoretical conceptualizations of e-HRM.

Human Rights Education and Peacebuilding Dec 24 2022 This book assesses the role of human rights education (HRE) in the peacebuilding field. Today, most governments, international organisations and non-governmental organisations recognise the importance of human rights in peace- and democracy-building activities in post-conflict regions. However, compared with other components of peacebuilding, little attention and funding have been given to the cultivation of human rights knowledge and skills within these populations. Almost nothing has been committed to understanding how HRE is best accomplished in such difficult circumstances. Human Rights Education and Peacebuilding demonstrates the promise of HRE programs to help bring about peace within challenging post-conflict contexts. Each chapter of this book (a) identifies the short and medium term impacts of seven different HRE programs on their respective target groups, and (b) provides an analysis of the peculiar local contextual factors that influenced each program's rationale for human rights education. More specifically, each chapter addresses these critical questions: - How are communities around the world using HRE to help rebuild their lives in the aftermath of an armed conflict? - How does HRE respond local problems and needs? How similar are the human rights impacts in the different projects? - How can we understand the promise and challenges associated with HRE as a component of community peace-building? This book will be of much interest to students of peacebuilding, conflict resolution, human rights, education studies and IR in general.

Human Development and Performance Throughout the Lifespan Apr 16 2022 Human Development & Performance Throughout the Lifespan, 2nd Edition is ideal for occupational therapy, physical therapy, and other rehabilitation disciplines. It provides a broad, occupation-based viewpoint of development and performance throughout all life stages with an emphasis on the factors that influence daily participation and optimal performance of desired daily life tasks. The authors use a life course conceptual model as an organizational foundation for clinical reasoning to help readers understand how to implement the activity- and participation-based goals and outcomes for therapy. Written by an occupational therapist and a physical therapist, the book incorporates chapters by leading experts in human development, giving users cutting-edge information and a wide range of perspectives. By integrating information from the International Classification of Function and Disability (ICF) with a developmental life-task perspective, the book gives both newcomers and experienced professionals an essential, contemporary frame of reference. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Ecosystem Services Mar 03 2021 Natural environments provide enormously valuable, but largely unappreciated, services that aid humans and other earthlings. It is becoming clear that these life-support systems are faltering and failing worldwide due to human actions that disrupt nature's ability to do its beneficial work. *Ecosystem Services: Charting a Path to Sustainability* documents the National Academies' Keck Futures Initiative Conference on Ecosystem Services. At this conference, participants were divided into 14 interdisciplinary research teams to explore diverse challenges at the interface of science, engineering, and medicine. The teams needed to address the challenge of communicating and working together from a diversity of expertise and perspectives as they attempted to solve a complicated, interdisciplinary problem in a relatively short time. *Ecosystem Services: Charting a Path to Sustainability* describes how ecosystem services scientists work to document the direct and indirect links between humanity's well-being and the many benefits provided by the natural systems we occupy. This report explains the specific topics the interdisciplinary research teams addressed at the conference, including the following: -how ecosystem services affect infectious and chronic diseases -how to identify what resources can be produced renewably or recovered by developing intense technologies that can be applied on a massive scale -how to develop social and technical capabilities to respond to abrupt changes in ecosystem services -how to design agricultural and aquacultural systems that provide food security while maintaining the full set of ecosystem services needed from landscapes and seascapes -how to design production systems for ecosystem services that improve human outcomes related to food and nutrition -how to develop appropriate methods to accurately value natural capital and ecosystem services -how to design a federal policy to maintain or improve natural capital and ecosystem services within the United States, including measuring and documenting the effectiveness of the policy -how to design a system for international trade that accounts for impacts on ecosystem services -how to develop a program that increases the American public's appreciation of the basic principles of ecosystem services

Human Rights and the Body May 05 2021 *Human Rights and the Body* is a response to the crisis in human rights, to the very real concern that without a secure foundation for the concept of human rights, their very existence is threatened. While there has been consideration of the discourses of human rights and the way in which the body is written upon, research in linguistics has not yet been fully brought to bear on either human rights or the body. Drawing on legal concepts and aspects of the law of human rights, Mooney aims to provide a universally defensible set of human rights and a foundation, or rather a frame, for them. She argues that the proper frames for human rights are firstly the human body, seen as an index reliant on the natural world, secondly the globe and finally, language. These three frames generate rights to food, water, sleep and

shelter, environmental protection and a right against dehumanization. This book is essential reading for researchers and graduate students in the fields of human rights and semiotics of law.

Curiositree: Human World Aug 28 2020 Choose your own learning adventure with Curiositree, a new series of visually compelling information charts. Discover the myriad reasons why humans have become the most successful species on the planet in this fascinating complete visual history of mankind. Travel from our earliest beginnings to the modern day, and discover how our evolution is interconnected by following the arrows that link to charts on related topics throughout the book. Exploring the development of farming, the origins of writing, religion, trade, weapons and armour, the first cities, and the growth of technology in the modern age, this visual compendium of wonders from the mind of man is full of fascinating information for curious young readers.

Use of Laboratory Animals in Biomedical and Behavioral Research Jan 13 2022 Scientific experiments using animals have contributed significantly to the improvement of human health. Animal experiments were crucial to the conquest of polio, for example, and they will undoubtedly be one of the keystones in AIDS research. However, some persons believe that the cost to the animals is often high. Authored by a committee of experts from various fields, this book discusses the benefits that have resulted from animal research, the scope of animal research today, the concerns of advocates of animal welfare, and the prospects for finding alternatives to animal use. The authors conclude with specific recommendations for more consistent government action.

Thermoregulation and Human Performance Nov 11 2021 Over the last decades, our understanding of the relationship between thermoregulation, performance and fatigue has changed dramatically. New advances in technology and methodology permitted the study of rising and decreasing body temperature on metabolism and provided insights into the role the nervous system plays in determining human performance under thermally stressful situations. Further analysis of previous research has been necessary in addition to considering theories derived from complimentary areas of research such as evolutionary biology, anthropology and cellular and molecular biology. This publication provides different interpretations of recent research for a better understanding of the limitations of thermoregulation. In particular, it presents evidence for the

human's ability to anticipate thermal limits and adjust their performance accordingly so that cellular homeostasis is preserved. Further, the book is featuring the inclusion of the effect of reduced body temperature on muscular performance and endurance which today is a popular method for providing avenues of reduced thermal strain and recovery from exercise. This publication will be an essential read for those working in thermal medicine, exercise physiology and human performance.

Overall Program Design, 1980-1982 Jan 01 2021

Drugs, Society, and Human Behavior Oct 10 2021 Designed for the introduction to drugs and substance abuse course as taught in departments of health education, psychology, biology, sociology, and criminal justice, this full-color market-leading text provides the latest information on drug use and its effects on society and human behavior. For over thirty years, instructors and students have relied on it to examine drugs and drug use from a variety of perspectives—in terms of behavioral, pharmacological, historical, social, legal, and clinical points of view.

Human Development and Faith (Second Edition) Sep 21 2022 This book, now in its second edition, brings together the best available understandings of human development from a multidisciplinary perspective. Uniquely inclusive of the moral and faith dimensions of context and life-cycle development, *Human Development and Faith* examines the interplay of mind, body, family, community, and soul at every stage of development. It addresses two central questions: What are the "good-enough" conditions of parenting, family, and community in each phase of life, from birth to death, that support growth and development? What gives life adequate meaning as development proceeds? If human development describes the normative and hoped-for passages of life, then faith provides the necessary component of meaning. Throughout the various perspectives offered in this volume is the premise that faith is that quality of living that makes it possible to fully live. The *Journal of Pastoral Theology* called the first edition of *Human Development and Faith* "an excellent text for pastoral theology courses, because it fulfills its ambitious goal of bringing a holistic faith perspective to the usual topics of development." This second edition includes a new chapter on infancy, updates reflecting our growing awareness of cultural diversity, and a new preface.

[Computation for Humanity](#) Feb 02 2021 The exponential progress and accessibility of computing has vastly increased data flows and revolutionized the practice of science, engineering, and communication. Computing plays a critical role in advancing research across almost every scientific discipline. *Computation for Humanity: Information Technology to Advance Society* is a guide for the creation of services, products, and tools that facilitate, support, and enhance progress of

humanity toward more sustainable life. This book: Provides a deep understanding of the practical applications of computation to solve human-machine problems Delivers insight into theoretical approaches in an accessible manner Provides a comprehensive overview of computational science and engineering applications in selected disciplines Crosses the boundaries between different domains and shows how they interrelate and complement one another Focuses on grand challenges and issues that matter for the future of humanity Shows different perspectives of computational thinking, understanding, and reasoning Provides a basis for scientific discoveries and enables adopting scientific theories and engineering practices from other disciplines Takes a step back to provide a human-related abstraction level that is not ultimately seen in pure technological elaborations/collections The editors provide a collection of numerous computation-related projects that form a foundation from which to cross-pollinate between different disciplines and further extensive collaboration. They present a clear and profound understanding of computing in today's world, and provide fundamental solutions to some of the most pertinent humanity-related problems.

Advanced Manufacturing and Sustainable Logistics Jul 27 2020 This book constitutes the proceedings of the 8th International Heinz Nixdorf Symposium, IHNS 2010, held in Paderborn, Germany, April 21-22, 2010, under the title "Changing Paradigms: Advanced Manufacturing and Sustainable Logistics". The 27 full and two short papers presented in this book were carefully reviewed and selected from a total of 63 submissions. They are grouped in five parts on Supply Chain Management, Production Logistics and Industrial Engineering, Operations Research Techniques, Humanitarian Logistics, and Simulation. The presentation is completed by nine invited keynote papers from renowned international experts in these fields.

Patient Safety and Quality Nov 23 2022 "Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)." - online AHRQ blurb, <http://www.ahrq.gov/qual/nursesdbk/>

Cognitive Unconscious and Human Rationality Jan 25 2023 Examining the role of implicit, unconscious thinking on reasoning, decision making, problem solving, creativity, and its neurocognitive basis, for a genuinely psychological conception of rationality. This volume contributes to a current debate within the psychology of thought that has wide implications for our ideas about creativity, decision making, and economic behavior. The essays focus on the role of implicit, unconscious thinking in creativity and problem solving, the interaction of intuition and analytic thinking, and the relationship between communicative heuristics and thought. The analyses move beyond the conventional conception of mind informed by extra-psychological theoretical models toward a genuinely psychological conception of rationality—a rationality no longer limited to conscious, explicit thought, but able to exploit the intentional implicit level. The contributors consider a new conception of human rationality that must cope with the uncertainty of the real world; the implications of abandoning the normative model of classic logic and adopting a probabilistic approach instead; the argumentative and linguistic aspects of reasoning; and the role of implicit thought in reasoning, creativity, and its neurological base. Contributors Maria Bagassi, Linden J. Ball, Jean Baratgin, Aron K. Barbey, Tilmann Betsch, Eric Billaut, Jean-François Bonnefon, Pierre Bonnier, Shira Elqayam, Keith Frankish, Gerd Gigerenzer, Ken Gilhooly, Denis Hilton, Anna Lang, Stefanie Lindow, Laura Macchi, Hugo Mercier, Giuseppe Mosconi, Ian R. Newman, Mike Oaksford, David Over, Guy Politzer, Johannes Ritter, Steven A. Sloman, Edward J. N. Stupple, Ron Sun, Nicole H. Theriault, Valerie A. Thompson, Emmanuel Trouche-Raymond, Riccardo Viale

Angels Over Moscow Mar 15 2022 *Angels Over Moscow* is an inspirational, first-person account of the life of American physician, Dr. Juliette Engel, who founded the non-profit MiraMed Institute to devote her energy and resources to helping reform maternal and infant healthcare in Russia. During a mission to improve medical care for children in orphanages, she discovered a link between the State institutions and an international network that trafficked young Russian girls to Scandinavia for prostitution. She followed their trail north into Norway, where she ran headlong into the international slave trade of the 20th Century—human trafficking. From that point forward, there was no turning back for the determined doctor, as she traveled throughout the former USSR, often at great personal peril, building a network of villagers, educators, police, media, and government officials called the Angel Coalition who committed their talents and resources to fighting human trafficking, and bringing thousands of Russian trafficking victims safely home. As a result of her work, she became eyewitness to the collapse of an empire as the USSR broke apart, and the Russian people struggled to find their identity without losing their humanity. Her strength and personal commitment saved thousands of lives and has helped heal the

wounds of a broken nation. In *Angels Over Moscow*, Dr. Engel describes her journey as the "gift of an unexpected life." More than that, it is a tribute to American ideals, and to idealists like Dr. Engel, who put her life and freedom on the line to fight the good fight for all of us. Every human being encounters crossroads on the path of life that require fate-altering decisions with unknowable outcomes. Selling my medical practice to live and work in Russia wasn't among my life plans when I first set out to explore what lay beyond the boundaries of my familiar world. How could I anticipate that I'd be drawn down the harder, darker, unexplored road into the tumultuous disorder of Russia? I look ba

Modern Food Microbiology Apr 04 2021 With thirty revised and updated chapters the new edition of this classic text brings benefits to professors and students alike who will find new sections on many topics concerning modern food microbiology. This authoritative book builds on the trusted and established sections on food preservation by modified atmosphere, high pressure and pulsed electric field processing. It further covers food-borne pathogens, food regulations, fresh-cut produce, new food products, and risk assessment and analysis. In-depth references, appendixes, illustrations, index and thorough updating of taxonomies make this an essential for every food scientist.

Canadian Journal of Genetics and Cytology May 25 2020

Competition Between Chimpanzees and Humans Over Fruit of *Saba senegalensis* in Southeastern Senegal Aug 08 2021

Western chimpanzees (*Pan troglodytes verus*) compete directly with humans for a variety of wild growing plants in the Tomboronkoto region of southeastern Senegal. Due to political, economic, and demographic factors, the number of people collecting the fruit of the *Saba senegalensis* vine, an important food for chimpanzees and humans at a time of limited food diversity, is increasing at a rate that may not be sustainable (Knutsen 2003). For humans, the fruit represents a much needed source of income at a time when crop stores are depleted and new crops have yet to produce. Often collected by women, the income derived from the *Saba senegalensis* harvest is used to buy clothing, food, and medicines (Knutsen 2003). As important as *Saba senegalensis* is to humans, it may be more so to chimpanzees. During the months of May, June and July, seeds of the *Saba senegalensis* were found in 87%, 89% and 95% of all fecal samples collected respectively, between 2001 and 2004 within the Tomboronkoto region (Pruetz 2005). No other food source was found in more than 50% of fecal samples in a month over that same time period, highlighting the importance of the fruit to chimpanzee diets (Pruetz in press). As *Saba senegalensis* is removed from the area, decreasing the number of seeds available for germination, humans and chimpanzees may be forced to face a future without this vital fruit. The goal of this project was to examine chimpanzee and human extraction of *Saba senegalensis* and more fully comprehend human use of the wild resources within the home range

of the Fongoli chimpanzee community. Specific research objectives were to determine: 1) amounts of *Saba senegalensis* extracted by chimpanzees and humans; 2) habitat use by chimpanzees and humans during *Saba senegalensis* season; and 3) the importance of *Saba senegalensis* and other wild plants to humans inhabiting the area. By integrating ecological and cultural anthropological field techniques, the intention of this study was to analyze the *Saba senegalensis* system in an effort to anticipate future chimpanzee and human behavior and apply results to subsequent conservation plans.

Discovering the Brain Jun 18 2022 The brain ... There is no other part of the human anatomy that is so intriguing. How does it develop and function and why does it sometimes, tragically, degenerate? The answers are complex. In *Discovering the Brain*, science writer Sandra Ackerman cuts through the complexity to bring this vital topic to the public. The 1990s were declared the "Decade of the Brain" by former President Bush, and the neuroscience community responded with a host of new investigations and conferences. *Discovering the Brain* is based on the Institute of Medicine conference, Decade of the Brain: Frontiers in Neuroscience and Brain Research. *Discovering the Brain* is a "field guide" to the brain—an easy-to-read discussion of the brain's physical structure and where functions such as language and music appreciation lie. Ackerman examines: How electrical and chemical signals are conveyed in the brain. The mechanisms by which we see, hear, think, and pay attention—and how a "gut feeling" actually originates in the brain. Learning and memory retention, including parallels to computer memory and what they might tell us about our own mental capacity. Development of the brain throughout the life span, with a look at the aging brain. Ackerman provides an enlightening chapter on the connection between the brain's physical condition and various mental disorders and notes what progress can realistically be made toward the prevention and treatment of stroke and other ailments. Finally, she explores the potential for major advances during the "Decade of the Brain," with a look at medical imaging techniques—what various technologies can and cannot tell us—and how the public and private sectors can contribute to continued advances in neuroscience. This highly readable volume will provide the public and policymakers—and many scientists as well—with a helpful guide to understanding the many discoveries that are sure to be announced throughout the "Decade of the Brain."

Indian Journal of Malariology Nov 30 2020

Transferring Human Impedance Regulation Skills to Robots May 17 2022 This book introduces novel thinking and techniques to the control of robotic manipulation. In particular, the concept of teleimpedance control as an alternative method to bilateral force-reflecting teleoperation control for robotic manipulation is introduced. In teleimpedance control, a compound reference command is sent to the slave robot including both the desired motion trajectory and impedance profile,

which are then realized by the remote controller. This concept forms a basis for the development of the controllers for a robotic arm, a dual-arm setup, a synergy-driven robotic hand, and a compliant exoskeleton for improved interaction performance.

Breeding Program for Commercial Beef Herds Jan 21 2020

????? Jun 25 2020 A wealth of photographs for the snuff bottle fancier.

Over the Human Apr 23 2020 This book presents a new way to understand human–animal interactions. Offering a profound discussion of topics such as human identity, our relationship with animals and the environment, and our culture, the author channels the vibrant Italian traditions of humanism, materialism, and speculative philosophy. The research presents a dialogue between the humanities and the natural sciences. It challenges the separation and oppression of animals with a post-humanism steeped in the traditions of the Italian Renaissance. Readers discover a vision of the human as a species informed by an intertwining with animals. The human being is not constructed by an onto-poetic process, but rather by close relations with otherness. The human system is increasingly unstable and, therefore, more hybrid. The argument it presents interests scholars, thinkers, and researchers. It also appeals to anyone who wants to delve into the deep animal–human bond and its philosophical, cultural, political instances. The author is a veterinarian, ethologist, and philosopher. He uses cognitive science, zooanthropology, and philosophy to engage in a series of empirical, theoretical, and practice-based engagements with animal life. In the process, he argues that animals are key to human identity and culture at all levels.

Nutrition and Human Needs--1972 Sep 09 2021
