great software. One needs to fully understand its features in order to effectively exploit them for the benefit of customers. Mr. Agrawal's books on SAP HR have a unique approach. A chapter usually focuses on a single business concept, and discusses the user interface as well as its associated configuration. This logical division makes it easier for readers to understand the functionality. Another important feature of these books is the level of detail. Each screen and each field in a screen is explained. Explanation includes meaning, use case and in some cases guidelines. Details are

balanced by overviews explaining the concepts and their relationships. While explaining functionality, Mr. Agrawal has taken efforts to highlight what can be done and how it is to be done. This is particularly important for less experienced users and consultants. Indicating chapter numbers against each menu and configuration item is a very useful innovation, as it establishes direct link between the SAP system and the book. Another useful feature is that these books can be read not only by consultants, but also by users, business process owners and even by senior managers. Employee Central is used to conduct tasks by employees, managers, HR Administrators, and payroll professionals. EC is a global and flexible solution that allows companies of all sizes to meet their HR needs. EC is a Software-as-a-Service (SaaS) solution that is hosted by SAP SuccessFactors. EC is a multi-tenant solution which makes it

so that all customers are automatically on the latest release without having to go through costly and time consuming upgrades. The updates are delivered to customers on a quarterly basis which allows significant innovation in a short period.SAP SuccessFactors Employee Central Payroll (ECP) is a cloud based system used to process payroll that is directly integrated within EC. ECP uses the global and world class SAP HCM Payroll engine as the basis for payroll processing. ECP is hosted by SAP Cloud, so customers do not have to invest in expensive upfront hardware or take on the additional responsibilities

of maintaining and securing the system. This contributes directly to a lower total cost of ownership (TCO) when compared to on-premise payroll models and makes it a viable system for much smaller companies than those that used SAP HCM. Data is automatically replicated from EC to ECP and users can access payroll specific functions - including running payroll, updating payroll data, and viewing pay statements - from within Employee Central.
