Neural-Symbolic Learning Systems May 25 2020 Artificial Intelligence is concerned with producing devices that help or replace human beings in their daily activities. Neural-symbolic learning systems play a central role in this task by combining, and trying to benefit from, the advantages of both the neural and symbolic paradigms of artificial intelligence. This book provides a comprehensive introduction to the field of neural-symbolic learning systems, and an invaluable overview of the latest research issues in this area. It is divided into three sections, covering the main topics of neural-symbolic integration - theoretical advances in knowledge representation and learning, knowledge extraction from trained neural networks, and inconsistency handling in neural-symbolic systems. Each section provides a balance of theory and practice, giving the results of applications using real-world problems in areas such as DNA sequence analysis, power systems fault diagnosis, and software requirements specifications. Neural-Symbolic Learning Systems will be invaluable reading for researchers and graduate students in Engineering, Computing Science, Artificial Intelligence, Machine Learning and Neurocomputing. It will also

be of interest to Intelligent Systems practitioners and anyone interested in applications of hybrid artificial intelligence systems.

Foundation Design Apr 23 2020 Using a design-oriented approach that addresses geotechnical, structural, and construction aspects of foundation engineering, this book explores practical methods of designing structural foundations, while emphasizing and explaining how and why foundations behave the way they do. It explains the theories and experimental data behind the design procedures, and how to apply this information to real-world problems. Covers general principles (performance requirements, soil mechanics, site exploration and characterization); shallow foundations (bearing capacity, settlement, spread footings -- geotechnical design, spread footings -- structural design, mats); deep foundations (axial load capacity -- full-scale load tests, static methods, dynamic methods; lateral load capacity; structural design); special topics (foundations on weak and compressible soils, foundation on expansive soils, foundations on collapsible soils); and earth retaining structures (lateral earth pressures, cantilever retaining walls, sheet pile walls, soldier pile walls, internally stabilized earth retaining structures). For geotechnical engineers, soils engineers, structural engineers, and foundation engineers.

Kings of Disaster Sep 21 2022 This is the long awaited, revised and illustrated edition of Kings of Disaster, the study of the Rainmakers of the Nilotic Sudan that is in many ways a breakthrough in anthropological thinking on African political systems. Taking his inspiration from René Girard's theory of consensual scapegoating, the author shows that the longstanding distinction of states and stateless societies as two fundamentally different political types does not hold. Centralized and segmentary systems only differ in the relative emphasis put on the victim role of the king as compared with that of enemy. Kings of Disaster thus proposes an uninvolved solution to the vexed problem of regicide.
