In this report an immunization technique is proposed for modifying these secret-key certificate issuing protocols in order to make them restrictive blind even when run in parallel mode. All the proofs of

correctness for the underlying, unmodified protocols are fully preserved under the modification, as is their applicability to privacy-protecting mechanisms for value transport."

**Secrets of the Lost Mode of Prayer** Dec 31 2020  
There are beautiful and wild forces within us." With these words, the mystic St. Francis described what ancient traditions believed was the most powerful force in the universe - the power of prayer. For more than 20 years, Gregg Braden has searched for evidence of a forgotten form of prayer that was lost in the West following the biblical edits of the early Christian Church. In the 1990's, he found and documented

this form of prayer still being used in the remote monasteries of central Tibet. He also found it practiced in sacred rites throughout the high deserts of the American Southwest. In this book, Braden describes this ancient form of prayer that has no words or outward expressions. Then, for the first time in print, he leads us on a journey exploring what our most intimate experiences tell us about our deepest beliefs. Through case histories and personal accounts, Braden explores the wisdom of these timeless secrets, and the power that awaits each of us just beyond our deepest hurt!

**Secrecy in Japanese Arts: "Secret Transmission" as a Mode of Knowledge** Apr 15 2022

Exploring the Japanese tradition of hidden (or the secret transmission of) knowledge within a closed and often hereditary group, the author investigates how esoteric practices

*More on Restrictive Blind Issuing of Secret-key Certificates in Parallel Mode* Mar 22 2020

Abstract: "A minimal variation is proposed of a recently described secret-key certificate scheme that is derived from the Schnorr signature scheme. The issuing protocol of the variation is conjectured to be restrictive blind in parallel mode, motivated by a recent argument of

Schoenmakers. The variation demonstrates that the double use of a generator is not problematic in any way, contrary to the belief expressed by Schoenmakers. A more profound argument for the conjectured security in parallel mode is provided, and similar variations are described for secret-key certificates based on Brickell-McCurley signatures. To create some order in the variety of restrictive blind certificate schemes that have been proposed to date, their specific merits and limitations are categorized and discussed."
