Reorganizing Government Apr 23 2020 A pioneering model for constructing and assessing government authority and achieving policy goals more effectively Regulation is frequently less successful than it could be, largely because the allocation of authority to regulatory institutions, and the relationships between them, are misunderstood. As a result, attempts to create new regulatory programs or mend under-performing ones are often poorly designed. Reorganizing Government explains how past approaches have failed to appreciate the full diversity of alternative approaches to organizing governmental authority. The authors illustrate the often neglected dimensional and functional aspects of inter-jurisdictional relations through in-depth explorations of several diverse case studies involving securities and banking regulation, food safety, pollution control, resource conservation, and terrorism prevention. This volume advances an analytical framework of governmental authority structured along three dimensions—centralization, overlap, and coordination. Camacho and Glicksman demonstrate how differentiating among these dimensions better illuminates the policy tradeoffs of organizational alternatives, and reduces the risk of regulatory failure. The book also explains how differentiating allocations of authority based on governmental function can lead to more effective regulation and governance. The authors illustrate the practical value of this framework for future reorganization efforts through the lens of climate change, an emerging and vital global policy challenge, and propose an “adaptive governance” infrastructure that could allow policy makers to embed the creation, evaluation, and adjustment of the organization of regulatory institutions into the democratic process itself.

This book will demonstrate how to develop a series of web application projects with the Python web micro-framework, and leverage extensions and external Python libraries and APIs to extend the development of a variety of larger and more complex web applications. Next you'll move on to a timeline application, built using concepts including pytest-Flask, the Blinker package, data modelling for user timelines, exception handling, and creating and organizing CLI tools. Moving on, you'll discover how to implement a photo timeline application where you'll explore topics such as writing and running celery tasks, API error handling and testing, and Werkzeug middlewares. Finally, the book walks you through creating an application which fetches data from GitHub and stores it locally. You will also learn how to install and configure Flask-Click extension. Style and approach This book covers how to effectively use the Flask micro-framework to develop a series of web applications. How to Make Things Happen Dec 20 2019 This book offers models and frameworks to analyze your service delivery systems as a whole. It presents the framework to solve customer problems by delivering the right knowledge at the right time to the right place and take advantage of the efficiency that technology and algorithms offer. Why do so

many brilliant plans fail to deliver in practice? Why can't your employees just do what you want them to do? In most cases, because the operations eco-system in which those plans must be deployed fails to fully understand the problem that needs to be solved. The fourth industrial revolution is seeing advances in Artificial Intelligence industrialize the service sector. But, despite the cost-cutting that these advances offer firms are still struggling to stay competitive. That is because they think that cost-cutting delivers increased efficiency whereas it is the other way around: increased efficiency cuts costs. And the heart of efficiency in delivering services is people and their knowledge. As industrialization drives ever more standardized offerings and ever little human contact it is in those rare moments of human interaction where the greatest opportunity to add or destroy value lies. It is human brains and the knowledge they contain that are best suited to problem-solving and individualizing client solutions. The real competitive edge will become the ability to foresee and individualize problem-solving. To do this, firms must start thinking of knowledge as inventory – who knows what, who needs to know what and where and when do they need to know it.

Blueprints for Tropical Dairy Farming Oct 22 2022 Blueprints for Tropical Dairy Farming provides insight into the logistics, infrastructure and management required for the development of small and large dairy farms in tropical developing countries. Farmers will learn how to improve the welfare, milk quality and productivity of their dairy herds. This book complements author John Moran's five previous books on the principles of tropical dairy farming. The manual covers a wide range of topics related to ensuring the sustainability of dairy production systems in tropical developing countries, such as South and East Asia, Africa and Central America. It also provides guidelines for the best management practices of large-scale, more intensive dairy systems. While smallholder farms are the major suppliers of milk in the tropics, many larger farms are becoming established throughout the tropics to satisfy the increasing demands for fresh milk. Blueprints for Tropical Dairy Farming will be a valuable resource for farmers and

stockpeople who want to improve the productive performance of their dairy herds, farm advisers who can assist farmers to achieve this aim, educators who develop training programs for farmers or who train dairy advisers in the basics of dairy production technology, and other stakeholders in tropical dairy production, such as local agribusiness, policy makers and research scientists.
