A problem-based text that presents a wide range of real cases in endodontics Clinical Cases in Endodontics presents actual clinical cases, accompanied by academic commentary, that question and educate the reader about essential topics in endodontic therapy. It begins with sets of cases illustrating the most common diagnoses and the steps involved in preparing a treatment plan. Subsequent chapters continue in this style, presenting exemplary cases as the basis of discussing various treatment options, including nonsurgical root canal treatment, re-treatment, periapical surgery, internal and external resorption, emergencies and trauma, and treating incompletely developed apices. The progression from common to increasingly challenging clinical cases enables readers to build their skills, aiding the ability to think critically and independently. The Clinical Cases series is designed to recognize the centrality of clinical cases to the profession by providing actual cases with an academic backbone. Clinical Cases in Endodontics applies both theory and practice to real-life cases in a clinically relevant format. This unique approach supports the trend in case-based and problem-based learning, thoroughly covering the full range of endodontic treatment. Unique case-based format supports problem-based learning Promotes independent learning through self-assessment and critical thinking Covers all essential topics within endodontics Presents numerous illustrations and photographs throughout to depict the concepts described Clinical Cases in Endodontics is an ideal resource for students mastering endodontic treatment, residents preparing for board examinations, and clinicians wanting to learn the most recent evidence-based treatment protocols. Wealth of commonly encountered clinical scenarios to enable trainees to manage paediatric cases more effectively, by applying their knowledge to real life clinical situations. This fully illustrated text is an

essential guide for trainees in Haematology and Medicine studying for higher examinations, as well as for professionals wishing to expand their knowledge or revalidate. The book contains over 100 illustrated cases covering the whole field of malignant and non-malignant haematology, including coagulation problems and infectious diseases. Each case contains a set of questions written by two Royal College examiners, with answers on the reverse page. Readers can make differential diagnoses and devise treatment plans and prognoses, before turning the page to read the experts' detailed answers. The cases are presented in random order – just as they would be in real life – and are of varying lengths and degrees of difficulty, accompanied by hundreds of colour photomicrographs, photographs, and x-rays. This new edition is revised and updated, with new cases, images, and tables. This book highlights the most commonly encountered cases in paediatric practice. This is a useful guide for the undergraduate medical students preparing for the practical and viva voce competitive examinations. Postgraduate students, practicing paediatricians and teachers find it a valuable reference source.

About the Author : - R. Arvind, MBBS, DCH, DNB, Consultant Paediatrician and Neonatologist, Managing Director, Vathsalya Speciality Hospital, Basaveshwarnagar, Bangalore, India. Based on real life scenarios, the Clinical Cases series presents quality case studies, complete with answers, to provide nursing students with an opportunity to explore scenarios they are likely to encounter in a variety of practice settings. Clinical Cases: Nursing Care Case Studies is perfect for use during exam preparation or as a study tool, providing an engaging approach to learning and revision. Clinical Cases in Implant Dentistry presents 49 actual clinical cases, accompanied by academic commentary, that question and educate the reader about essential topics in implant dentistry, encompassing diagnosis, surgical site preparation and placement, restoration, and maintenance of dental implants. Unique case-based format supports problem-based learning Promotes independent learning through self-assessment and critical thinking Highly illustrated with full-color clinical cases Covers all essential topics within implant dentistry Using an easily accessible, highly templated format, Clinical Cases in Tropical Medicine, 2nd Edition, provides more than 100 realistic scenarios for tropical infectious diseases. Full-color photographs and maps, a convenient question-and-answer presentation, and succinct summary boxes help you identify and understand the tropical diseases you're likely to encounter. This up-to-date 2nd Edition is an excellent resource and study tool for infectious diseases fellows, doctors preparing for exams in tropical medicine, primary care doctors with patients who are global travelers, and global health nurses and practitioners alike. Offers realistic scenarios for encountering patients in rural, resource-poor settings, presenting cases as "unknowns," just as in a real clinic or emergency situation. Covers newly emerging diseases such as Zika virus, severe fever with thrombocytopenia syndrome (SFTS), and knowlesi malaria. Features topics in migrant medicine of particular importance to clinicians in non-tropical countries, including louse-borne-relapsing fever, spinal brucellosis, and hyperreactive malarial splenomegaly. Includes "classic" tropical diseases such as African trypanosomiasis, chagas, leprosy, and yaws. Reflects the use of novel diagnostics used in resource-poor settings, as well as developing drug resistance in relevant cases. Provides a useful index and map that organize cases geographically, for a targeted approach to study. Serves as a companion to Manson's Tropical Diseases, with a reading list at the end of each case referring to the corresponding chapter in the larger text. You've read your textbook and your course

With its practical approach strongly linked to underlying theory, the series integrates your knowledge with the realities of managing clinical problems, and provides a basis for developing problem-solving skills. The core areas of undergraduate study are covered in a logical sequence of learning activities: each is followed by a detailed answer, along with a number of short-answer questions to help you practice for examinations in the first two to three years of your course. Mechanisms showing the pathogenesis of a disease process and explanations of the clinical findings and laboratory investigations have been included. This book provides a highly structured case history text covering each of the important components of the undergraduate biomedical sciences, in the form of 45 clinical scenarios. Each scenario is followed by eight to ten questions and answers with detailed feedback. Publisher's Note: Products purchased from 3rd Party sellers are not guaranteed by the Publisher for quality, authenticity, or access to any online entitlements included with the product. Clinical Cases in Eye Care provides real-world case examples to illustrate the current scope of primary eye care practice. Over 120 clinical cases help readers gain familiarity with frequently seen scenarios as they would unfold in a typical setting. This case collection is a useful teaching and learning tool for instructors, students and clinicians. This practical ENT reference guide includes over 100 clinical case scenarios, ranging from basic ENT issues to more challenging clinical cases, presented randomly as they would occur in real life. Each scenario includes thought-provoking questions followed by reasoned answers and is superbly illustrated with diagrams and high quality photographs. This is an invaluable text for otorhinolaryngologists in practice and in training, from hospital-based surgeons preparing for higher examinations to established physicians for their continuing professional development. Containing 220 challenging clinical cases and illustrated with superb, high-quality images, this book covers a wide range of anaesthesia-related questions and answers from straightforward cases through to more challenging presentations. It is an invaluable text for anaesthesia professionals in practice and in training, both for those doctors preparing for higher examinations and for established physicians for their continuing professional development. Nurse anaesthetists, learning at an advanced level, will also benefit from these case discussions. 100 Cases in Clinical Medicine is an indispensable revision tool for medical students preparing for clinical examinations or OSCEs. Using scenarios which mimic daily life, the cases will interest students in clinical problems and help them develop their clinical reasoning skills, with each case presenting details of a patient's medical history and the key findings of a clinical examination, together with initial investigation results for evaluation. Key questions then prompt the student to evaluate the patient, and reach a decision regarding their condition and the possible management plan, while the answer pages will help the student to understand the processes that a clinician goes through in dealing with the problems presented. Contents are organised to provide a quick review of each body system, with a selection of cases relevant to that specific system, then the majority are presented randomly to mimic real life in a GP surgery or emergency department. New to this edition: a review of each body system as well as random cases; new page

design with a second colour used throughout; and brought up-to-date with 25% new cases. It is vitally important for medical students and junior doctors to grasp an understanding of 'real-life medicine'. This innovative book of cases shows how a particular presentation may progress, and the different complications that may arise and emerge over time, which may be missed by the 'snapshot in time' approach taken by many problem-based volumes. The content reflects the average length of stay for a patient in hospital, in which their situation can change in a multitude of ways, and the management of chronic conditions may also need to be adapted as complications arise. Demonstrates the real bedside experiences that medical students can expect, in whichever simple or complex way that they may present Cases selected from a range of sub-specialties for comprehensive coverage across the curriculum Illustrates the complicated, progressive problems that will be seen while practicing as a doctor with detailed diagrams and diagnostic imagery to aid understanding Shows, with timepoints, how differential diagnoses may change as more information becomes available and new symptoms arise Describes a typical initial hospital stay, and subsequent presentations to the general practitioner and hospital readmission The Authors Andrew Solomon, BM BCH MA(Hons) DM FRCP, is a Consultant Physician, East and North Hertfordshire NHS Trust, Stevenage, UK. Julia Anstey, BSc (Hons) MBBS, is a Foundation Doctor, Somerset NHS Foundation Trust, Taunton, UK. Liora Wittner, MBBS BSc, is a Resident in Internal Medicine, Shamir Medical Centre, Be'er Ya'akov, Israel. With contributions from Priti Dutta, MBBS BSc FRCR, Consultant Radiologist, Royal Free London NHS Foundation Trust, London, UK. Integrates the students' knowledge of basic science with the realities of managing clinical problems. This title includes 36 clinical cases, addressing the major body system areas; learning points which are designed to give a rounded explanation of the topic; and, model answers and marking schemes. Wiley-Blackwell's "Clinical Cases" series is designed to recognize the centrality of clinical cases to the profession by providing actual cases with an academic backbone. Clinical Cases in Prosthodontics grounds itself in core principles of this rehabilitative specialty and demonstrates their practical, every-day application through range of case presentations building from simple to complex and from common to rare. This unique approach supports the new trend in case-based and problem-based learning, thoroughly covering topics ranging from conventional complete denture prostheses to full mouth rehabilitation using both implant and tooth-supported prostheses. Each case begins with a short description of the initial patient presentation and the learning objectives and goals the subsequent case discussion will demonstrate. This is accompanied by relevant medical and dental histories, notes on extra-oral and soft tissue examination and a thorough list of clinical findings, all presented in bulleted form to facilitate ease of learning. Clinical decision making factors are then discussed in detail, well illustrated with multiple clinical photos showing progressive stages of treatment. Cases conclude with review questions and relevant literature citations supporting each answer. Ideal for practitioners and students alike, Clinical Cases in Prosthodontics is the ultimate resource linking evidence-based research to every-day application. You've read your textbook and your course notes. Now you need to apply your knowledge to real life clinical situations. The problem-solving approach of Core Clinical Cases guides you to think of the patient as a whole, rather than as a sequence of unconnected symptoms. With its emphasis on everyday practice strongly linked to underlying theory, the series integrates your knowledge with the realities of managing

clinical problems, and provides a basis for developing sound analytical and confident decision-making skills. The core areas of undergraduate study are covered in a logical sequence of learning activities: the same questions are asked of each clinical case, followed by detailed explanatory answers. Related OSCE counselling cases, with related questions and answers, also feature in each section. Key concepts and important information are highlighted, and the reader-friendly layout reflects exactly the type of question you will encounter, making these volumes the perfect revision aid for all types of case-based examination. The Paediatrics volume, fully revised and updated in this third edition, focuses on the following topics: \* Growth problems \* Developmental delay \* Failure to thrive \* Acute severe illness \* Acute and chronic fever \* Respiratory problems \* Fits, faints and funny turns \* Headache \* Diarrhoea and vomiting \* Abdominal pain \* Jaundice \* Rashes \* Poisoning \* Emotional and behavioural problems

Volumes in the Core Clinical Cases series remain absolutely invaluable in the run up to clinical, written or OSCE examinations, and ideal course companions for all undergraduate medical students at various stages in their clinical training. The new edition of this book is a comprehensive guide to the diagnosis and management of paediatric diseases and disorders. Presented as a collection of 105 clinical cases ranging from the most common to the most rare conditions, each topic explains history, signs and symptoms, clinical features, examination and investigation techniques, differential diagnosis, treatment options, and complications. The fifth edition has been fully revised and updated to provide clinicians with the latest advances and techniques in the field. New cases covering Henoch-Schönlein purpura, infectious mononucleosis, and obesity, have been added to this edition. The extensive text is highly illustrated with clinical photographs and diagrams, and an exhaustive glossary provides a ready reckoner for practical and viva voce examination preparation. The previous edition (9789352501793) published in 2016. There are many modalities available to image the heart and this variety and number of scan types can prove to be daunting to radiologists and cardiologists. In addition, there are the numerous devices, stents, valves and other paraphernalia which are employed in the management of cardiac disease, which need to be recognised and identified when interpreting any of these various scans. Containing 75 challenging clinical cases and illustrated with superb, high quality images, Cardiac Imaging covers a wide range of cardiac imaging problems from basic radiographic cases to more challenging and esoteric cases involving echocardiography, cardiac MRI, cardiac CT and myocardial perfusion imaging. The book uses an accessible format for quick assimilation. It remains an invaluable text for all radiology and cardiology professionals in practice and in training, from hospital-based doctors preparing for higher examinations to established physicians in their continuing professional development. Learning how to deal with actual cases and developing the ability to arrive at a reasoned clinical judgement are important parts of a student's training. The 3rd edition of PACES for the MRCP has been fully revised and updated throughout to retain its pole position as the textbook to accompany core medical training (CMT) and prepare candidates for success in the Practical Assessment of Clinical Examination Skills and a future specialty career. Features Fully revised for the new Station 5 and completely updated throughout. Promotes understanding and deeper learning of modern medicine applicable to PACES and the specialist registrar. Emphasis on clinical assessment – history-taking, examination and communication skills – equipping candidates with appropriate differential diagnoses from which to develop the right diagnosis. Encourages candidates to question why a diagnosis has arisen and consider its consequences. For example, ‘Heat failure’ is not a diagnosis until a candidate has considered the differential diagnoses of breathlessness and decided why heart failure is most likely, and then considered its cause (not always ischaemic heart disease), its presentation (acute, chronic, left or right ventricular or both) and, most importantly, the effects of it and its treatments on a patient’s life. This 3rd edition of PACES for the MRCP continues to provide fully revised, up-to-date, evidence-based coverage of investigations and treatments. Whilst the emphasis of PACES is on clinical skills, candidates who understand when, for example, a patient with rheumatoid arthritis might benefit from a biologic agent and how this will influence inflammatory disease, is better equipped for success. A one-volume text giving candidates complete preparation for the PACES exam within one portable volume 250 cases organised into the 5 stations of the PACES

exam – respiratory and abdominal system, history taking, cardiovascular and nervous system, communication and ethics and skin, locomotion, eyes and endocrine systems

Engaging question-and-answer approach at the end of each case – excellent preparation for the exam

Boxed tips highlight vital information – helps identify what is most important to remember

Produced in full colour throughout

Colour coding for each station

Many more illustrations added - now over 300 clinical photographs and line drawings in colour

Many more cases added, bringing the number up to 250 - 50 per station

History-taking and communication skills stations now revised so that they exactly mimic the requirements of the exam

Intraocular inflammation is particularly difficult to diagnose and treat, often resembling a complex puzzle of patient history, symptoms, imaging, and laboratory test results.

**Clinical Cases in Uveitis: Differential Diagnosis and Management** is a unique, case-based resource designed to help you navigate the range of challenging manifestations and presentations that often mimic other diseases. More than 90 real-world uveitis cases are presented in a highly templated, easy-to-follow format, along with step-by-step guidance on the right patient questions, assessment, differential diagnosis, testing, management, and follow-up care. Provides a variety of patient presentations and scenarios and unique clinical situations that mirror day-to-day practice. Covers current diagnostic imaging modalities, including optical coherence tomography (OCT), optical coherence tomography angiography, fluorescein angiography (FA), and indocyanine green angiography (ICG). Features diagnostic and management algorithms that assist in differential diagnosis and decision making for even the most complex cases, including those in which the patient does not improve as expected, prompting a reassessment of diagnosis and management. Contains approximately 250 high-quality images, including color anterior segment photographs, color fundus photographs, OCT images, and angiograms. Discusses distinguishing infectious from non-infectious inflammation; when and how to start systemic immunosuppressive therapy; diagnostic criteria and management of “white dot syndromes”; pediatric uveitis; masquerade syndromes, including inherited retinal degenerations, malignancies, and paraneoplastic syndromes; and much more. Includes the authors’ specific thought processes and approach in particularly challenging cases. An excellent resource and study tool for ophthalmology residents and fellows, those studying for oral boards, general ophthalmologists, retina specialists, and more. This clinical case book serves as a useful guide for dermatologists, internists, family practitioners, pediatricians, and anyone else charged with the care of infectious diseases of the skin of parasitic, fungal, bacterial, and viral origin. The case-based format distinguishes this work from a reference-style textbook, allowing readers to relate the presented cases to their own practice.

**Clinical Cases in Infections and Infestations of the Skin** provides help and insight for clinicians in managing skin disease, with each chapter serving as a springboard for further pursuit and more extensive training. The reader will find useful information and tools to help patients and will enable readers to add to their current clinical regimens by becoming familiar with healing systems beyond medical dermatology. The book will enable those new to the field to develop a literacy and competence in the management of infectious dermatology. For the more experienced learner, it will assist in finding new ways to sharpen diagnostic and treatment acumens. Starting a placement or rotation in an unfamiliar clinical area is exciting but can be daunting.
