*Emergency Response Guidebook* Feb 26 2023 Does the identification number 60 indicate a toxic substance or a flammable solid, in the molten state at an elevated temperature? Does the identification number 1035 indicate ethane or butane? What is the difference between natural gas transmission pipelines and natural gas distribution pipelines? If you came upon an overturned truck on the highway that was leaking, would you be able to identify if it was hazardous and know what steps to take? Questions like these and more are answered in the Emergency Response Guidebook. Learn how to identify symbols for and vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. Keeping this guide around at all times will ensure that, if you were to come upon a transportation situation involving hazardous substances or dangerous goods, you will be able to help keep others and yourself out of danger. With color-coded pages for quick and easy reference, this is the official manual used by first responders in the United States and Canada for transportation incidents involving dangerous goods or hazardous materials.

**2012 Emergency Response Guidebook** Nov 11 2021 The official Emergency Response Guidebook (ERG) is a guide for use by transporters, firefighters, police, and other emergency services personnel who may be the first to arrive at the scene of a transportation incident involving a hazardous material. It is used by first responders in (1) quickly identifying the specific or generic classification of the material(s) involved in the incident, and (2) protecting themselves and the general public during this initial response phase of the incident. The ERG is updated every three to four years to accommodate new products and technology.

*2000 Emergency Response Guidebook Oct 18 2019*

*Emergency Response Guidebook 2012 Nov 30 2020* The ERG is primarily applicable for hazardous materials transported by highway and railway, but also is applicable for materials transported by air or waterway, as well as by pipeline. It was first issued by the US Department of Transportation in 1973, but later became a joint publication of the Department of Transportation (US DOT), Transport Canada (TC), and the Secretariat of Communications and Transportation (SCT) of Mexico, with collaboration with the Chemistry Information Center for Emergencies (CIQUIME) of Argentina. The ERG is issued every 4 years, with editions now being published

in Spanish (Guía de Respuesta en Caso de Emergencia). In 1996 it was published as the North American Emergency Response Guidebook, but by the next publication in 2000 "North American" was removed due to its use by several South American countries). The ERG "is primarily a guide to aid first responders in quickly identifying the specific or generic hazards of the material(s) involved in the incident, and protecting themselves and the general public during the initial response phase of the incident" and should only be used for the "initial response phase" (about the first thirty minutes) of an incident . It is divided into six color-coded sections (white [uncolored], yellow, blue, orange, green, and a second white [uncolored]). The ERG includes over 170 "Guides" (found in the Orange Section) that identify the primary hazards associated with the applicable general category of hazardous material and general guidance on how to respond to incidents involving that general category of hazardous material. The primary purpose of ERG is to direct the emergency responders to the most appropriate of these guides, based on the incident. The ERG also provides guidance regarding recommended evacuation distances, if applicable, in the Green Section.
