A Modern Reawakening to Ancient Classic The concepts and theories to many modern Feng Shui applications are rooted way back in the ancient texts of the yore. And Di Li Bian Zheng is one of the many that survived through the raging stream of times. This verbatim translation bridges the language gap which deters some of the serious practitioners and students from deepening their knowledge in this highly-precise field. The Sinitic Civilization A Factual History through the Lens of Archaeology, Bronzeware, Astronomy, Divination, Calendar and the Annals The book covered the time span of history of the Sinitic civilization from antiquity, to the 3rd millennium B.C. to A.D. 85. A comprehensive review of history related to the Sinitic cosmological, astronomical, astrological, historical, divinatory, and geographical developments was given. All ancient Chinese calendars had been examined, with the ancient thearchs' dates examined from the perspective how they were forged or made up. The book provides the indisputable evidence regarding the fingerprint of the forger for the 3rd century A.D. book Shang-shu (remotely ancient history), and close to 50 fingerprints of the forger of the contemporary version of The Bamboo Annals. Using the watershed line of Qin Emperor Shihuangdi's book burning of 213 B.C., the book rectified what was the original history before the book burning, filtered out what was forged after the book burning, sorted out the sophistry and fables that were rampant just prior to the book burning, and validated the history against the records in the oracle bones, bronzeware, and bamboo slips. The book covers 95-98% and more of the contents in the two ancient history annals of The Spring Autumn Annals and The Bamboo Annals. There are dedicated chapters devoted to interpreting Qu Yuan's poem Asking Heaven (Tian Wen), the mythical book The Legends of Mountains & Seas (Shan Hai Jing), geography book Lord Yu's Tributes (Yu Gong), and Zhou King Muwang's Travelogue (Mutan-zhi Zhuan). The book has appendices of two calendars: the first anterior quarter remainder calendar (247 B.C.-104 B.C./247 B.C.-85 A.D.) of the Qin Empire, as well as a conversion table of the sexagenary years of the virtual Yin-li (Shang dynasty) quarter remainder calendar versus the Gregorian calendar, that covers the

years 2698 B.C. to 2018 A.D. Book I stops about the midpoint of the 242 years covered in Confucius' abridged book The Spring & Autumn Annals (722-481 B.C.). Book II stops at Han Emperor Zhangdi (Liu Da, reign A.D. 76-88; actual reign Aug of A.D. 75-Feb of A.D. 88), with the A.D. 85 adoption of the Sifen-li posterior quarter remainder calendar premised on reverting to the sexagenary years of the virtual Yin-li (Shang dynasty) quarter remainder calendar, a calendar disconnected from the Jupiter's chronogram, that was purportedly invented by the Confucians on basis of Confucius' identifying the 'qi-lin' divine giraffe animal and wrapping up the masterpiece The Spring & Autumn Annals two years prior to death. What Is Feng Shui? Feng Shui (pronounced fung shway) is an ancient Chinese practice that involves art and science. It has been around for thousands of years. The practice relies on the laws of heaven and earth to help people balance their energies within a space. This is to help them receive fortune and health. The word "feng" means wind and "shui" means water. Therefore Feng Shui means "wind water." The local Chinese people place wind that is gentle and water that is clear in one setting. It is to represent good health and harvest. Feng Shui prides itself on thinking that the land includes Chi. The work Chi has to do with energy. Back in ancient times, the local Chinese people claimed that the energy of the land would be good or bad for others. Feng Shui comes from the Taoist ideals in order to deal with nature. Taoism deals with religious and philosophical beliefs. Taoism has a strong influence in Asia. Taoism is also responsible for birthing yin and yang concepts. Yin and yang deal with opposite aspects of a phenomenon or comparing two phenomena. They represent quality in regard to correspondence which is found in most areas of Chinese science and philosophy. An example of this would be ancient Chinese medicine. Here is the first translation into English of the complete Yin-Hai Jing-Wei, a classic fifteenth-century text on Chinese ophthalmology. As one of the few original manuscripts on traditional Chinese medicine translated into a Western language, this work offers an unprecedented view of the practice of medicine, and specifically eye care, in premodern China. Superbly rendered from the classical Chinese and extensively annotated by Paul U. Unschuld and Jürgen Kovacs, the text provides detailed descriptions of the etiology, symptomatology, and therapy of every eye disease known to fifteenth-century Chinese practitioners. The translators' introduction also provides the first in-depth analysis of the development of this specialty within Chinese medicine. As a source for comparative studies of Chinese and Western medicine and numerous other issues in the history of medicine and Chinese thought, the Yin-Hai Jing-Wei has no equal in the Western world. Containing over 33,000 terms, the Chinese-English Dictionary of Chinese Medicine is the largest, fully searchable list of Chinese medical terms ever published. It is the only sufficiently comprehensive list of Chinese medical terms to be an ultimate go-to for any translator, student, or clinician. It contains a vast array of general terms, including the 5,000 or more of Practical Dictionary of Chinese Medicine (Paradigm Publications, 1997). It also contains the 1,500 standard and alternate acupoint names from Grasping the Wind (Paradigm Publications, 1989) and over 10,000 standard and alternate names of medicinals described in the Comprehensive Chinese Materia Medica (Paradigm Publications, 2023) derived from the Zhōng Yào Dà Cí Diǎn. The present e-book version offers maximum searchability without the need of indexes. Chinese terms are given in simplified and complex characters, so that they can be found by anyone who knows Chinese. Pinyin is given in accented and unaccented form, so that users can search by it whether they know the tones or have a system capable of entering tone marks. General terms can be searched by English, acupoints by alphanumeric codes, and medicinals can be searched by English and Latin pharmacognostic names. To make for the greatest utility without overly burdening the text, a standard set of graphical indicators are used throughout this and other related e-books. Square brackets ([ ]) indicate elements of terms that can be omitted (such as omissible elements of medicinal names) or notes to Chinese and English terms. A double asterisk (✳) indicates polysemous medicinal names. A gray sidebar in the left-hand margin indicates a commonly used item. This dictionary has a history of over thirty years of continual expansion and refinement. It began with a database created while writing Fundamentals of Chinese Medicine (Paradigm Publications, 1985). It was published in the form of Glossary of Chinese Medical Terms (Paradigm Publications in 1990). It was expanded and republished in the form of the English-Chinese, Chinese-English Dictionary of Chinese Medicine (Hunan Science and Technology Press, 1995). And in 2014, after further expansion, it was made available as the Online TCM Dictionary on Paradigm Publications' website. These decades of development and publication have given the terms here presented the benefit of other scholars' contributions, as well as the refinements inspired by public critique. Chinese-English Dictionary of Chinese Medicine is an invaluable asset for translators and teachers engaged in compiling or presenting information from primary sources. As a bilingual term list, it has met the critical test of actual translations of the classical Chinese medical texts, the Shāng Hán Lùn (Paradigm Publications, 1999) and Jīn Guì Yào Lǜe (Paradigm Publications, 2013) Chinese Medicine: Theories of Modern Practice (Paradigm Publications, 2022) shows this terminology to be up to the challenge of presenting the entire theoretical knowledge of professional Chinese

medical education. This e-book version offers translators suggestions for translation problems they come across in their work, without proprietary restrictions and at an extremely low cost. However, the notion that Chinese medicine does not possess a terminology that requires a corresponding terminology in English and other languages has not faded from the Western world. In view of this, the present work also includes an introduction explaining issues surrounding terminology and translation. ""A vertitable feast of concise, useful, reliable, and up-to-date information (all prepared by top scholars in the field), Nienhauser's now two-volume title stands alone as THE standard reference work for the study of traditional Chinese literature. Nothing like it has ever been published."" --Choice The second volume to The Indiana Companion to Traditional Chinese Literature is both a supplement and an update to the original volume. Volume II includes over 60 new entries on famous writers, works, and genres of traditional Chinese literature, followed by an extensive bibliographic update (1985-1997) of editions, translations, and studies (primarily in English, Chinese, Japanese, French, and German) for the 500+ entries of Volume I. The fifth volume of Dr Needham's immense undertaking covers the subjects of chemistry and chemical technology. This, the thirteenth part of the volume, is the first history of Chinese mining to appear in a western language. Covering from the Neolithic period to the present day it deals with the full range of Chinese mining from copper to mercury, arsenic to coal and a large number of other minerals and materials. The author draws extensively not only on written sources but also on archaeological remains, and observation of traditional techniques still in use. The interrelationship between Chinese mining and the social, economic and political conditions in which it took place is examined, and leads the author to conclude that these extraneous factors were probably more important in determining how mining was carried out than technological progress.
