"Between Hindu and Christian examines a movement of low caste and Dalit devotees worshipping Jesus in Catholic spaces in Varanasi, the purported heart of Hindu civilization. Through thick description and analysis, the author examines the worldview and ways of life of these devotees, along with the Catholic priests and nuns who mediate Jesus, Mary and other members of the Catholic pantheon in a place never associated with Christianity. The author places this movement within the context of the devotional history of Varanasi, the history of Indian Christianity, the rise of low caste and Dalit emancipatory struggles, and the ascendancy of Hindu nationalism to demonstrate, among other things, that religious categories are not nearly as self-evident as they often seem"-- Advanced Inorganic Chemistry - Volume I is a concise book on basic concepts of inorganic chemistry. It acquaints the students with the basic principles of chemistry and further dwells into the chemistry of main group elements and their compounds. It primarily caters to the undergraduate courses (Pass and Honours) offered in Indian universities. The proposed book presents an overview of select theories in the classical Vaiśeṣika system of Indian philosophy, such as the concept of categories, creation and existence, atomic theory, consciousness and cognition. It also expounds in detail the concept of dharma, the idea of the highest good and expert testimony as a valid means of knowing in Vaiśeṣika thought. Some of the major themes discussed

are the religious inclination of Vaiśeṣika thought towards Pasupata Saivism, the affiliation of the Vaiśeṣika System to the basic foundations of Indian philosophical thought, namely Veda and Yoga, and their insights into science, hermeneutics and metaphysics. In addition, this book includes recent Sanskrit commentaries on key Vaiśeṣika texts and provides a glimpse of Vaiśeṣika studies across the world. Overall, this book enunciates the Vaiśeṣika view from original sources and is an important work for Vaiśeṣika studies in current times for serious students as well as researchers.

Advanced Inorganic Chemistry - Volume II is a concise book on basic concepts of inorganic chemistry. Beginning with Coordination Chemistry, it presents a systematic treatment of all Transition and Inner-Transition chemical elements and their compounds according to the periodic table. Special topics such as Pollution and its adverse effects, chromatography, use of metal ions in biological systems, to name a few, are discussed to provide additional relevant information to the students. It primarily caters to the undergraduate courses (Pass and Honours) offered in Indian universities. This book explains in detail yet in brief about the religious conversion techniques adopted from time to time by a sect of Islam called Pirana Satpanth. Beyond the Rainbow by Prabhakar is a work of fiction. Each story is a poetic experience, aesthetic as well as elevating. The story connotes as a whole without any annotation. The moral and aesthetic coalesce. The stories are a portrayal of simple characters that come and go as silently as the day or the night. The stories approximate to an Indian macrocosm of vision and variety without any prejudice to their universal extent and intent. A pervasive sense of

irony is ever there to chasten any romantic pigmentation. The book serves a sumptuous cocktail of romance and symbolism, humour and irony, realism and religion with a sympathetic human concern. It betrays a simple soul's predicament and pride. Going through the book the reader would hear the echoes of the past, the present, and the future of humanity. A journey from 'The Champion' to 'The Mahakumbha' is a pilgrimage through India. This book presents the subject matter tailor-made for the latest syllabus of North-Eastern Hill University (NEHU) to enable its students to study the course material through a single book without having to refer to multiple sources and comprehend the subject in simple, understandable language.

Part A of a 2-part series Distributed Artificial Intelligence (DAI) came to existence as an approach for solving complex learning, planning, and decision-making problems. When we talk about decision making, there may be some meta-heuristic methods where the problem solving may

resemble like operation research. But exactly, it is not related completely to management research. The text examines representing and using organizational knowledge in DAI systems, dynamics of computational ecosystems, and communication-free interactions among rational agents. This publication takes a look at conflict-resolution strategies for nonhierarchical distributed agents, constraint-directed negotiation of resource allocations, and plans for multiple agents. Topics included plan verification, generation, and execution, negotiation operators, representation, network management problem, and conflict-resolution paradigms. The manuscript elaborates on negotiating task decomposition and allocation using partial global planning and mechanisms for assessing nonlocal impact of local decisions in distributed planning. The book will attract researchers and practitioners who are working in management and computer science, and industry persons in need of a beginner to advanced understanding of the basic and advanced concepts. What is the shelf-life of our Karma? Is it possible to escape from the fruits of our Karma ever? Can a meticulously built character be marred by a sin committed in the past? Welcome to The Last Evidence. Ramgopal, a tourist guide in New Delhi, often engages in interesting conversations with his tourists, impressing them with his vast knowledge on various subjects. However, by sheer coincidence, all the tourist's houses are burgled before they reach home after the tour. As the investigation progresses, the needle of suspicion points towards Ramgopal. He flees the city and takes shelter in a remote ashram to avoid being caught. Gradually, he transforms the entire region and earns the

trust and respect of the villagers. When he is about to be rewarded by the local administration for his significant contribution to the all-round development of the village, the old investigation reaches his doorstep. Will the law catch up with him? Will he be exonerated? Is he really guilty? Tracing the history of the concepts of civility and civilisation, 'Civilizing Emotions' chooses a global perspective and highlights the role of civility and civilisation in the creation of a new and hierarchised global order in the era of high imperialism and its entanglements, focusing on the developments in a number of well-chosen European and Asian countries. Emotions were at the core of the practices linked to the political project of the civilising process. 'Civilizing Emotions' brings out the role of emotions as an object of the civilising process. Discourses On Development Have Increasingly Shifted Their Attention From Being Purely Economic To A More Holistic One That Encompasses Quality Of Life, Equitable Distribution And Sustainable Development. Actualisation Of This Holistic Model Of Human Development Requires A Collaborative And Coordinated Action Between State And Mediation Institution, Like Ngos, Community Groups, Etc. Carrying Forward This Inter-Relationship Between State And Civil Society Institutions In Furthering Change And Development, The Book Has Taken One Component Of Development: Total Literacy Campaign . The Study Highlights The Complementarity Of State And Civil Society Institutions And Simultaneously It Emphasis The Need Of A Vibrant Community Organisation For The Success Of State Sponsored Public Policies And Implementation. The Work Is Pioneering Empirical

Attempt To Highlight The Linkage Between State And Individual Through The Meditating Institutions Like Ngos. The Gyanganj Legacy' is a fictional story for all ages. It combines the richness of folklore with modern wisdom, to unravel the plot of an age-old battle between Good vs Evil, Light vs Darkness. Advanced Inorganic Chemistry - Volume I is a concise book on basic concepts of inorganic chemistry. It acquaints the students with the basic principles of chemistry and further dwells into the chemistry of main group elements and their compounds. It primarily caters to the undergraduate courses (Pass and Honours) offered in Indian universities. In spite of the fact that the story of Blind Students and the Elephant is merely a story, the same has been repeated several times in the history of the mankind right from the primordial times till to-date; in fact this is the way science has gradually grown on its journey of evolution. Scientists have to face similar situations on many occasions; they never get full information before devising any theory, instead they discover part-truths in several steps, each of which is discovered after long periods of time. This is analogous to concept developed by a blind man who forms an idea about the elephant by touches only one of its body-part. Scientists can therefore consider only one aspect of a problem at a time; they encounter with other aspects of the same problem at a much later point of time. At times such a situation might lead to misconceptions. Sometimes such misconceptions, conceived by some renowned personalities, are even considered to be very brilliant ideas and valuable achievements. As a result heritage of falsified knowledge had been transferred, several times in the past, to at

least next 3-4 generations. This becomes possible because common man blindly follows renowned persons who are considered to be wise; normally no one even bothers to verify the truth; this is the greatest misfortune of the human kind. Misjudging or regarding such misconceptions as valuable discoveries might cause science to divagate from its path to find out absolute truth; a very long and valuable time might also be lost in elimination of such misconceptions. The concept of democracy is not new to India. In fact, the substance of self-government lies embedded in its hoary past. Nearly forty-one years ago the country adopted a Constitution based on the principles of liberty, equality, fraternity and the rule of law. India opted for parliamentary form of government because it suited the genius of the people. It elected nine Parliaments on the basis of universal adult franchise and was thus able to live up to the expectations of a political awakened electorate. The image of Parliament and its credibility as a representative institution largely depends on the role and functions of its Members. The objective of the present study is, therefore, to provide an analysis of the work done by the Ninth Lok Sabha (18 December, 1989 to 13 March, 1991) in major fields during its short but eventful life span (one year two months and twenty-six days). This sought to be done by means of articles by distinguished parliamentarians and others, and statements and statistical tables supplemented by brief introductory notes. An effort has also been made to present a comparative picture of the background of Members of the earlier Lok Sabha and the work done by them. One of the noteworthy features of the Ninth Lok Sabha, which held 7

sessions consisting of 109 sittings lasting over 754 hours, was the passing of as many as 63 Bills including 7 Constitution Amendment Bills. Two of the important Bills passed were the -Prasar Bharati- (Broadcasting Corporation of India) Bill and the -National Commission for Womenâ€™ Bill. These may well be considered as landmarks in the history of enactments made by the Parliament. The Government can take credit for answering a staggering number of 21,550 questions on diverse subjects put to it by the members of the Ninth Lok Sabha. It is hoped that the study will be helpful to researchers, parliamentarians and all those who are engaged in a study of the working of parliamentary institutions and processes and enable them to form a picture of the tasks achieved and acquaint them with the diverse activities which a modern Parliament is called upon to perform. Artificial cells, cell engineering and therapy are emerging technologies which will make a significant impact on the future of medicine and healthcare. However, research within the field is vast. This unique book provides a comprehensive study of the most recent advances in the field and its practical applications. The first part of the book offers the reader an introduction to the basics of artificial cell technology with chapters on its origins, design, current status within medicine and future prospects. Part two covers apoptosis, the use of bone marrow stromal cells in myocardial regeneration together with signalling and tissue engineering. Part three discusses artificial cells for therapy, procedures for various clinical conditions and the current status of the discipline within the field. The book concludes with a final section on the role of artificial

cells in medicine with particular focus on the use of artificial cells as blood substitutes and their potential use in myocardial regeneration, drug delivery and in treating kidney and bowel diseases, diabetes and cancer. Artificial cells, cell engineering and therapy is a valuable reference for researchers, students and practitioners within the field. Introduces the basics of artificial cell technology Provides a comprehensive study of the most recent advances in artificial cells, cell engineering and cell therapy Discusses the design, engineering and uses of artificial cells Drawing on detailed analyses of reference, interpretation, and the nature value, Satya P. Mohanty defends a "postpositivist realist" conception of objectivity as a legitimate ideal of all inquiry. He outlines a realist theory of social identity and multicultural politics, showing why radical moral universalism and cultural diversity need to be seen a complementary, rather than competing ideals. This book explains in detail yet in brief about the religious conversion techniques adopted from time to time by a sect of Islam called Pirana Satpanth. Comprises articles on the life and work of Satya Prakash, b. 1914, Indologist, and papers, most on the history and culture of Rajasthan, India. Satya Prakash's Modern Inorganic Chemistry is a treatise on the chemistry of elements on the basis of latest theories of Chemistry. Initial chapters are devoted to the study of fundamentals of Chemistry such as structure of atom, periodic classification of elements, chemical bonding and radioactivity, to name a few. It further graduates to complex discussions not only on extraction, properties and uses of the elements but also on preparation, properties, uses and structure of their important

compounds. Chemistry of elements and their compounds have been explained on the basis of their position in the long form of periodic table and their electronic configurations/structures. Special emphasis has been put on the discussion of the correlation between the structure and properties of elements/ compound. The book caters to the requirements of Bachelor in Science (Pass) courses. With detailed discussion on several advanced topics, the students of Bachelor in Science (Honours) and Masters in Science would also find it extremely useful. Contributed articles.
