Life Cycles Mar 25 2020 Julian Sayerer grew up riding a bicycle and worked as a bike courier in London. When the world record for a circumnavigation by bike is broken--the biker riding in conjunction with banks and big business--Julian sets out to take it back. This is his story of that record, riding 110 miles a day for six months on only £7.82 a day, through jungles, snow, and twenty different countries. He finds himself stranded without money in the deserts of Kazakhstan, bitten by a dog in North Carolina, and sleeping under motorway bridges in China. Taken by life on the road and a spirit of adventure, he loves every minute of it. A tale of excitement and world politics by bicycle, travelling at 12 mph, Julian finds that the Tartars of Central Asia aren't so different to the trailer families of Louisiana. This book is a reminder that the world is out there, and it's waiting for us.

Design of Sustainable Product Life Cycles Oct 24 2022 Life cycle design is understood as "to develop" (to plan, to calculate, to define, to draw) a holistic concept for the entire life cycle of a product". Life cycle design means a one time planning during the concept phase of a product in which the pathway of a product over the entire life cycle is determined. So e.g. the planning of possible services for a product during its utilization phase, the way of material recycling, how and which parts can be reused, how the logistics for recycling will be organised or how the product can be used afterwards. So it is a conceptual pre-design of all later activities over the life cycle. By this understanding the book delivers a really holistic approach because before a product is physically made a life-long concept and utilization scenarios with closed material and information cycles have to be developed. This promotes a real "thinking in product (life) cycles". The book addresses professionals as well as researchers and students in the field of product life cycle management. Different methods in the field of product design, operation and recycling will be presented and finally merge to an integrated method of product life cycle design. Readers will benefit from the holistic approach which enables them to design successful products by the implementation of closed loop product life cycles.

[Religion and life cycles in early modern England](#) Dec 26 2022 Religion and life cycles in early modern England assembles scholars working in the fields of history, English literature and art history to further our understanding of the intersection between religion and the life course in the period c. 1550–1800. Featuring chapters on Catholic, Protestant and Jewish communities, it encourages cross-confessional comparison between life stages and rites of passage that were of religious significance to all faiths in early modern England. The book considers biological processes such as birth and death, aspects of the social life cycle including schooling, coming of age and marriage and understandings of religious transition points such as spiritual awakenings and conversion. Through this inclusive and interdisciplinary approach, it seeks to show that the life cycle was not something fixed or predetermined and that early modern individuals experienced multiple, overlapping life cycles.

The Life Cycle of Clusters Jul 21 2022 One-size-fits-all cluster policies have been rightly criticized in the literature. One promising approach is to focus cluster policies on the specific needs of firms depending on the stage of development (emergence, growth, sustainment or decline) their cluster is in. In this highly insightful book, these stage-specific cluster policies are analysed and evaluated. Moreover, several chapters also focus on smart specialization policies to promote regional development by taking into account the emergence and adaptation of clusters and industries. In so doing, the book contributes to a newly emerging literature on how the cluster life cycle concept can inform policies and how these policies differ from static approaches that ignore the dynamism of clusters. The underlying idea is to foster the ability of clusters to renew themselves and to generate new developmental paths, thus preventing stagnation and decline. This state-of-the-art exploration of smart specialization from a cluster life cycle perspective is an invaluable book for academics in the fields of economic geography, entrepreneurship, innovation, industrial economics, regional studies and cluster research. It will also appeal to regional policy makers and practitioners dealing with public policy. Contributors include: Y. Al-Saleh, B.T. Asheim, A. Auer, M. Benner, P. Cooke, D. Fornahl, J.K. Fosse, M. Life Cycle Inventory Analysis Feb 22 2020 Life Cycle Inventory (LCI) Analysis is the second phase in the Life Cycle Assessment (LCA) framework. Since the first attempts to formalize life cycle assessment in the early 1970, life cycle inventory analysis has been a central part. Chapter 1 “Introduction to Life Cycle Inventory Analysis” discusses the history of inventory analysis from the 1970s through SETAC and the ISO standard. In Chapter 2 “Principles of Life Cycle Inventory Modeling”, the general principles of setting up an LCI model and LCI analysis are described by introducing the core LCI model and extensions that allow addressing reality better. Chapter 3 “Development of Unit Process Datasets” shows that developing unit processes of high quality and transparency is not a trivial task, but is crucial for high-quality LCA studies. Chapter 4 “Multi-functionality in Life Cycle Inventory Analysis: Approaches and Solutions” describes how multi-functional processes can be identified. In Chapter 5 “Data Quality in Life Cycle Inventories”, the quality of data gathered and used in LCI analysis is discussed. State-of-the-art indicators to assess data quality in LCA are described and the fitness for purpose concept is introduced. Chapter 6 “Life Cycle Inventory Data and Databases“ follows up on the topic of LCI data and provides a state-of-the-art description of LCI databases. It describes differences between foreground and background data, recommendations for starting a database, data exchange and quality assurance concepts for databases, as well as the scientific basis of LCI databases. Chapter 7 “Algorithms of Life Cycle Inventory Analysis“ provides the mathematical models underpinning the LCI. Since Heijungs and Suh (2002), this is the first time that this aspect of LCA has been fundamentally presented. In Chapter 8 “Inventory Indicators in Life Cycle Assessment”, the use of LCI data to create aggregated environmental and resource indicators is described. Such indicators include the cumulative energy demand and various water use indicators. Chapter 9 “The Link Between Life Cycle Inventory Analysis and Life Cycle Impact Assessment” uses four examples to discuss the link between LCI analysis and LCIA. A clear and relevant link between these phases is crucial.
