Pichi is an Afro-Caribbean English-lexifier Creole spoken on the island of Bioko, Equatorial Guinea. It is an offshoot of 19th century Krio (Sierra Leone) and shares many characteristics with West African relatives like Nigerian Pidgin, Cameroon Pidgin, and Ghanaian Pidgin English, as well as with the English-lexifier creoles of the insular and continental Caribbean.

This comprehensive description presents a detailed analysis of the grammar and phonology of Pichi. It also includes a collection of texts and wordlists. Pichi features a nominative-accusative alignment, SVO word order, adjective-noun order, pronominal determiners, and prepositions. The language has a seven-vowel system and twenty-two consonant phonemes. Pichi has a two-tone system with tonal minimal pairs, morphological tone, and tonal processes. The morphological structure is largely isolating. Pichi has a rich system of tense-aspect-mood marking, an indicative-subjunctive opposition, and a complex copular system with several suppletive forms. Many features align Pichi with the Atlantic-Congo languages spoken in the West African littoral zone. At the same time, characteristics like the pronominal position of adjectives and determiners show a typological overlap with its lexifier English, while extensive contact with Spanish has left an imprint on the lexicon and grammar as well. In this very significant work, translated from the Italian, Bovati examines in careful detail the practice of justice in ancient Israel, first the bilateral controversy (the rib), and then the legal judgement properly speaking. "Re-establishing Justice" is destined to become the standard reference work in the field. The contents deal with 1. The juridical dispute in general. 2 The accusation, 3 The response of the accused, 4 The reconciliation, 5. Judgement in court, 6.The acts and procedures preceding the debate, 7. The debate, 8. The sentence and execution. "To say Charles Schwab is an entrepreneur is actually an understatement. He really is a revolutionary."—Phil Knight, co-founder of Nike, author of *Shoe Dog*

The founder of The Charles Schwab Corporation recounts his ups and downs as he made stock investing, once the expensive and clubby reserve of the few, accessible to ordinary Americans. In this deeply personal memoir, Schwab describes his passion to have Main Street participate in the growing economy as investors and owners, not only earners. Schwab opens up about his dyslexia and how he worked around and ultimately embraced it, and about the challenges he faced while starting his fledgling company in the 1970s. A year into his grand experiment in discounted stock trading, living in a small apartment in Sausalito with his wife, Helen, and new baby, he carried a six-figure debt and a pocketful of personal loans. As it turned out, customers flocked to Schwab, leaving his small team scrambling with scarce resources and no road map to manage the company's growth. He recounts the company's game-changing sale to Bank of America—and how, in the end, the merger almost doomed his organization. We learn about the clever and timely leveraged buyout he crafted to regain independence; the crushing stock market collapse of 1987, just weeks after the company had gone public; the dot-com meltdown of 2000 and its reverberating aftermath of economic stagnation, layoffs, and the company's eventual reinvention; and how the company's focus on managing risk protected it and its clients during the financial crisis in 2008, propelling its growth. A remarkable story of a

company succeeding by challenging norms and conventions through decades of change, Invested also offers unique insights and lifelong principles for readers—the values that Schwab has lived and worked by that have made him one of the most successful entrepreneurs of our time. Today, his eponymous company is one of the leading financial services firms in the world. Advance praise for Invested “I’ve admired Chuck Schwab for a long time. When you read this book, you’ll understand why.”—Warren E. Buffett “This is a fascinating story that teaches you about the never-ending evolution of an entrepreneurial company, but even more about personal learning from that experience. So read, learn how to learn from experience, and enjoy.”—George P. Shultz, former secretary of Labor, Treasury, and State

The Preposition Book is intended as a thorough guide and workbook to address students’ questions and misconceptions regarding English prepositions and improve their ability to use prepositions fluently. The book comprehensively covers prepositions and also provides opportunities to practice many other essential points of English grammar and usage practice. The Preposition Book is organized by level of difficulty but was written for intermediate-level students. Many exercises are included within each chapter, and Putting It Together and Expansion Exercises are designed to give students even more opportunity to practice. A Comprehensive Test appears at the end of each chapter. This book constitutes the refereed proceedings of the 4th International Workshop on Systems and Frameworks for Computational Morphology, SFCM 2015, held in Stuttgart, Germany, in September 2015. The 5 revised full papers and 5 short papers presented were carefully reviewed and selected from 16 submissions. The SFCM Workshops focus on linguistically motivated morphological analysis and generation, computational frameworks for implementing such systems, and linguistic frameworks suitable for computational implementation. SFCM 2015 and the papers presented in this volume aim at broadening the scope to include research on very underresourced languages, interactions between computational morphology and formal, quantitative, and descriptive morphology, as well as applications of computational morphology in the Digital Humanities. Until about two decades ago, the study of writing systems and their relationship to literacy acquisition was sparse and generally modeled after studies of English language learners. This situation is now changing. As the worldwide demand for literacy continues to grow, researchers from different countries with different language backgrounds

have begun examining the connection between their writing systems and literacy acquisition. This text, which derives from a NATO sponsored conference on orthography and literacy, brings together the research of 70 scholars from across the world--the largest assemblage of such experts to date. Their findings are grouped into three parts, as follows: Part I, Literacy Acquisition in Different Writing Systems, describes the relationship between orthography and literacy in twenty-five orthographic systems. This section serves as a handy reference source for understanding the orthographies of languages as diverse as Arabic, Chinese, English, Icelandic, Kannada, and Kishwahili. Part II, Literacy Acquisition From a Cross-Linguistic Perspective, makes direct comparisons of literacy acquisition in English and other orthographic systems. The overall conclusion that emerges from these eight chapters is that the depth of an orthographic system does influence literacy acquisition primarily by slowing down the acquisition of reading skills. Even so, studies show that dyslexic readers can be found across all orthographic systems whether shallow or deep, which shows that dyslexia also has internal cognitive and biological components. Part III, Literacy Acquisition: Instructional Perspectives, explores literacy acquisition from developmental and instructional perspectives and ends with a look into the future of literacy research. This Handbook is appropriate for scholars, researchers, and graduate students in such diverse fields as cognitive psychology, psycholinguistics, literacy education, English as a second language, and communication disorders. This striking study of the meaning and use of the major spatial prepositions in French provides valuable insight into how the human mind organizes spatial relationships. Most previous analyses of spatial prepositions have assumed that their semantic properties can be adequately explained by familiar logical and geometrical concepts. Thus, the standard view of the preposition "in" as it appears in the sentence "the ball is in the bag" postulates that it refers to the geometrical relation of inclusion. This paradigm, however, falters when faced with the contrast in acceptability between sentences such as "the bulb is in the socket" and "the bottle is in the cap." The force exerted by the "landmark" (a conceptually fixed object) on the "target" (a moveable object) is crucial in this difference: the functional notion of containment seems more operational in the use of the preposition "in" than inclusion. That is, what are taken to be the landmark and the target depend greatly on the functions these objects serve in the human scheme. This offers important clues to otherwise problematic linguistic

quirks, such as why one sleeps in one's bed, while one is said to lie on one's deathbed. While many of the examples apply in English as well as French, there are some noteworthy differences—in French one sits on a chair, but in a couch. Vandeloise convincingly argues that it is precisely this subjective element which makes a standard geometrical account unfeasible. This book constitutes the refereed proceedings of the 16th International Conference on Text, Speech and Dialogue, TSD 2013, held in Pilsen, Czech Republic, in September 2013. The 65 papers presented together with 5 invited talks were carefully reviewed and selected from 148 submissions. The main topics of this year's conference was corpora, texts and transcription, speech analysis, recognition and synthesis, and their intertwining within NL dialogue systems. The topics also included speech recognition, corpora and language resources, speech and spoken language generation, tagging, classification and parsing of text and speech, semantic processing of text and speech, integrating applications of text and speech processing, as well as automatic dialogue systems, and multimodal techniques and modelling.

This book describes and systematizes all aspects of the grammar of Russian: the patterns of orthography, sounds, inflection, syntax, tense-aspect-mood, word order, and

intonation. It is especially concerned with the meaning of combinations of words (constructions). The core concept is that of the predicate history: a record of the states of entities through time and across possibilities. Using predicate histories, the book presents an integrated account of the semantics of verbs, nouns, case, and aspect. More attention is paid to syntax than in any other grammars of Russian written in English or in other languages of Western Europe. Alan Timberlake refers to the literature on variation and trends in development, and makes use of contemporary data from the internet. This book will appeal to students, scholars and language professionals interested in Russian. Derive useful insights from your data using Python. You will learn both basic and advanced concepts, including text and language syntax, structure, and semantics. You will focus on algorithms and techniques, such as text classification, clustering, topic modeling, and text summarization. Text Analytics with Python teaches you the techniques related to natural language processing and text analytics, and you will gain the skills to know which technique is best suited to solve a particular problem. You will look at each technique and algorithm with both a bird's eye view to understand how it can be used as well as with a microscopic view to understand the mathematical concepts and to implement them to solve your own problems. What You Will Learn: Understand the major concepts and techniques of natural language processing (NLP) and text analytics, including syntax and structure Build a text classification system to categorize news articles, analyze app or game reviews using topic modeling and text summarization, and cluster popular movie synopses and analyze the sentiment of movie reviews Implement Python and popular open source libraries in NLP and text analytics, such as the natural language toolkit (nltk), gensim, scikit-learn, spaCy and Pattern Who This Book Is For : IT professionals, analysts, developers, linguistic experts, data scientists, and anyone with a keen interest in linguistics, analytics, and generating insights from textual data This classical descriptive grammar of the Phoenician-Punic language of the period. ca. 1200 BCE to 350 CE, will prove of particular interest to Hebraists and Semitists. The work is copiously illustrated with examples from texts of all periods and dialects. Much of the material is presented here for the first time. This book offers a highly accessible introduction to natural language processing, the field that supports a variety of language technologies, from predictive text and email filtering to automatic summarization and translation. With it, you'll learn how to write

Python programs that work with large collections of unstructured text. You'll access richly annotated datasets using a comprehensive range of linguistic data structures, and you'll understand the main algorithms for analyzing the content and structure of written communication. Packed with examples and exercises, *Natural Language Processing with Python* will help you: Extract information from unstructured text, either to guess the topic or identify "named entities" Analyze linguistic structure in text, including parsing and semantic analysis Access popular linguistic databases, including WordNet and treebanks Integrate techniques drawn from fields as diverse as linguistics and artificial intelligence This book will help you gain practical skills in natural language processing using the Python programming language and the Natural Language Toolkit (NLTK) open source library. If you're interested in developing web applications, analyzing multilingual news sources, or documenting endangered languages -- or if you're simply curious to have a programmer's perspective on how human language works -- you'll find *Natural Language Processing with Python* both fascinating and immensely useful. The dream of automatic language translation is now closer thanks to recent advances in the techniques that underpin statistical machine translation. This class-tested textbook from an active researcher in the field, provides a clear and careful introduction to the latest methods and explains how to build machine translation systems for any two languages. It introduces the subject's building blocks from linguistics and probability, then covers the major models for machine translation: word-based, phrase-based, and tree-based, as well as machine translation evaluation, language modeling, discriminative training and advanced methods to integrate linguistic annotation. The book also reports the latest research, presents the major outstanding challenges, and enables novices as well as experienced researchers to make novel contributions to this exciting area. Ideal for students at undergraduate and graduate level, or for anyone interested in the latest developments in machine translation. This is the first book of its kind to provide a practical and student-friendly guide to corpus linguistics that explains the nature of electronic data and how it can be collected and analyzed. Designed to equip readers with the technical skills necessary to analyze and interpret language data, both written and (orthographically) transcribed Introduces a number of easy-to-use, yet powerful, free analysis resources consisting of standalone programs and web interfaces for use with Windows, Mac OS X, and Linux Each section includes practical exercises, a

list of sources and further reading, and illustrated step-by-step introductions to analysis tools Requires only a basic knowledge of computer concepts in order to develop the specific linguistic analysis skills required for understanding/analyzing corpus data This collection of essays, written between 1980 and 2001, places the search for theoretical elegance at centre stage. The author shows that although the conceptual difference between 'elegance' and the minimalist search for 'perfection' may appear to be subtle, its consequences are in fact wide ranging and radical. These considerations lead to a markedly different and novel theory of syntax where most of the major features of minimalism, such as derivation, economy, merge, move, phrases and projection, are not just reanalysed or shifted to other components but in a majority of cases are dispensed with completely or reduced to much simpler notions. Towards an Elegant Syntax makes available important and some less easily accessible publications with new introductory material. This book constitutes the proceedings of the 22nd International Conference on Text, Speech, and Dialogue, TSD 2019, held in Ljubljana, Slovenia, in September 2019. The 33 full papers presented in this volume were carefully reviewed and selected from 73 submissions. They were organized in topical sections named text and speech. The book also contains one invited talk in full paper length. At a time when globalization and the advent of the internet have accelerated the spread and diversification of English varieties worldwide, this book provides a constructive assessment of the theoretical models that best account for the development and use of Englishes in the early 21st century. In this endeavor, the present book brings together cutting-edge contributions by leading scholars who explore the notion of linguistic globalization based on a wide range of ESLs, EFLs and ELF, synchronic and diachronic data, different methodological approaches (corpus-based, sociolinguistic, ethnographic), and a variety of data resources (social media, multiplayer online games, journalistic data, GloWbE, Corpus of Historical Singapore English, thematic blogs). Collectively, these studies serve as a springboard for future research on the globalization of Englishes and they contribute to a timely and necessary scholarly conversation on what constitutes adequate theoretical models of World Englishes in the 21st century. This book presents empirical research of grammatical collocations of the type: verb and the prepositions «of» and «to». It is based on comparisons of English and Czech sentences containing verbs and prepositions that are followed by the object. The author creates English-Czech verbal prepositional

counterparts and groups on the grounds of the similar semantic, syntactic features. She identifies the features that are the same for each verb group and generalizes them. The book determines trends and tendencies for verbs when they collocate with a certain preposition. The bestselling workbook and grammar guide, revised and updated! A human-inspired, linguistically sophisticated model of language understanding for intelligent agent systems. One of the original goals of artificial intelligence research was to endow intelligent agents with human-level natural language capabilities. Recent AI research, however, has focused on applying statistical and machine learning approaches to big data rather than attempting to model what people do and how they do it. In this book, Marjorie McShane and Sergei Nirenburg return to the original goal of recreating human-level intelligence in a machine. They present a human-inspired, linguistically sophisticated model of language understanding for intelligent agent systems that emphasizes meaning--the deep, context-sensitive meaning that a person derives from spoken or written language. Tuvaluan is a Polynesian language spoken by the 9,000 inhabitants of the nine atolls of Tuvalu in the Central Pacific, as well as small and growing Tuvaluan communities in Fiji, New Zealand, and Australia. This grammar is the first detailed description of the structure of Tuvaluan, one of the least well-documented languages of Polynesia. Tuvaluan pays particular attention to discourse and sociolinguistics factors at play in the structural organization of the language. This book constitutes the refereed proceedings

of the 4th International Conference on Text, Speech and Dialogue, TSD 2001, held in Zelezná Ruda, Czech Republic in September 2001. The 59 revised papers presented were carefully reviewed and selected from 117 submissions. The book presents a wealth of state-of-the-art research and development results from the field of natural language processing with emphasis on text, speech, and spoken language. Linguistically annotated corpora are becoming a central part of the corpus linguistics field. One of their main strengths is the level of searchability they offer, but with the annotation come problems of the initial complexity of queries and query tools. This book gives a full, pedagogic account of this burgeoning field. Beginning with an overview of corpus linguistics, its prerequisites and goals, the book then introduces linguistically annotated corpora. It explores the different levels of linguistic annotation, including morphological, parts of speech, syntactic, semantic and discourse-level, as well as advantages and challenges for such annotations. It covers the main annotated corpora for English, the Penn Treebank, the International Corpus of English, and OntoNotes, as well as a wide range of corpora for other languages. In its third part, search strategies required for different types of data are explored. All chapters are accompanied by exercises and by sections on further reading. The two-volume set LNAI 8265 and LNAI 8266 constitutes the proceedings of the 12th Mexican International Conference on Artificial Intelligence, MICAI 2013, held in Mexico City, Mexico, in November 2013. The total of 85 papers presented in these proceedings were carefully reviewed and selected from 284 submissions. The first volume deals with advances in artificial intelligence and its applications and is structured in the following five sections: logic and reasoning; knowledge-based systems and multi-agent systems; natural language processing; machine translation; and bioinformatics and medical applications. The second volume deals with advances in soft computing and its applications and is structured in the following eight sections: evolutionary and nature-inspired metaheuristic algorithms; neural networks and hybrid intelligent systems; fuzzy systems; machine learning and pattern recognition; data mining; computer vision and image processing; robotics, planning and scheduling and emotion detection, sentiment analysis and opinion mining.
