The Psychology of Habit Jan 28 2021 This unique reference explores the processes and nuances of human habits through social psychology and behavioral lenses. It provides a robust definition and theoretical framework for habit as well as up-to-date information on habit measurement, addressing such questions as which mechanisms are involved in

habitual action and whether people can report accurately on their own habits. Specialized chapters pay close attention to how habits can be modified, as well as widely varying manifestations of habitual thoughts and behaviors, including the mechanisms of drug addiction and recovery, the repetitive characteristics of autism, and the unwitting habits of health professionals that may impede patient care. And across these pages, contributors show the potential for using the processes of maladaptive habits to replace them with positive and health-promoting ones. Throughout this volume attention is also paid to the practice of conducting habit research. Among the topics covered: Habit mechanisms and behavioral complexity. Complexities and controversies of physical activity habit. Habit discontinuities as vehicles for behavior change. Habits in depression: understanding and intervention. A critical review of habit theory of drug dependence. Questions about the automaticity of habitual behaviors. The Psychology of Habit will interest psychologists across a wide spectrum of domains: habit researchers in broader areas of social and health psychology, professionals working in (sub)clinical areas, interested scholars in marketing, consumer research, communication, and education, and public policymakers dealing with questions of behavioral change in the areas of health, sustainability, and/or education.

The Evolving Self Mar 30 2021 "The Evolving Self" focuses upon the most basic and universal of psychological problems--the individual's effort to make sense of experience, to make meaning of life. According to Robert Kegan, meaning-making is a lifelong activity that begins in earliest infancy and continues to evolve through a series of stages encompassing childhood, adolescence, and adulthood. The Evolving Self describes this process of evolution in rich and human detail, concentrating especially on the internal experience of growth and transition, its costs and disruptions as well as its triumphs. At the heart of our meaning-making activity, the book suggests, is the drawing and redrawing of the distinction between "self" and "other." Using Piagetian theory in a creative new way to make sense of how we make sense of ourselves, Kegan shows that each meaning-making stage is a new solution to the lifelong tension between the universal human yearning to be connected, attached, and included, on the one hand, and to be distinct, independent, and autonomous on the other. "The Evolving Self" is the story of our continuing negotiation of this tension. It is a book that is theoretically daring enough to propose a reinterpretation of the Oedipus complex and clinically concerned enough to suggest a variety of fresh new ways to treat those psychological complaints that commonly arise in the course of development. Kegan is an irrepressible storyteller, an impassioned opponent of the health-and-illness approach to psychological distress, and a sturdy builder of psychological theory. His is an original and distinctive new voice in the growing discussion of human development across the life span.

Why did cognitive science replace behaviorism? This book addresses all these questions and more, covering the whole range of psychology, from neuroscience and artificial intelligence to hermeneutics and qualitative research in the process. Psychology of Technology Apr 30 2021 This unique treatise expands on the philosophy of technology to argue for a psychology of technology based on the complex relationships between psychology, biology and technology, especially in the light of our relationships with our digital devices, our online lives, and our human experience. Drawing from disciplines ranging from philosophy and evolution to cognition and neuroscience, it examines myriad aspects of the brain's creative development: the cognitive, sensory, and motor processes that enable technological progress and its resulting efficiencies and deficiencies along with our discomforts and pleasures. These experiences are key to behavioral and affective processes in technology, manifest in such diverse phenomena as multitasking, the shift in tech design from ergonomics to hedonomics, and the many types of online problem behaviors. Through these rich pages, readers can understand more deeply the history and future of human adjustment and adaptation in an environment intertwined with technology—and, with the ascendance of video games and virtual reality, new conceptions of the human self. Among the topics covered: Could we have remained a tech-devoid society? Technology, ergonomics and the non-executive functions of our body. New directions in brain-computer interface. From avatars and agents to virtual reality technology.

Psychology Aug 23 2020 Over 2 million students have learned psychology from Dennis Coon. Serving as a guide and mentor to students, Coon uses humor and everyday analogies to make abstract concepts concrete, such as "the cerebral cortex looks like a giant, wrinkled walnut." Using a consistent pedagogical structure, the author helps students learn psychology by using the tested principles of Survey, Question, Read, Recite and Review. In addition, he helps them to master psychology with a fourth "R," Relate, which requires them to relate their new knowledge to their own experience, helping abstract ideas to become concrete. The book uses a "chunking" principle, asking students to read major sections, then review them, before they go on. As the new title of the book indicates, PSYCHOLOGY: A MODULAR APPROACH

TO MIND AND BEHAVIOR (formerly called ESSENTIALS OF PSYCHOLOGY) is now modular, and is the medium-sized text in a three-book set authored by Dennis Coon. By separating the chapters into modules, this edition goes even further in "chunking" content for student mastery. This text covers the basic set of topics but differs by having two chapters on development, a separate chapter on "Gender and Sexuality" (Chapter 15), and a concluding chapter on "Applied Psychology" (Chapter 17). The book is frequently described as "fun" because it presents topics that are of interest and relevance to students, relates it to their lives, and provides many engaging applications that students can use in their own lives. For teachers who want a book that students will read, enjoy, and savor - Coon's text is the perfect choice.

The Psychology of Money Jun 20 2020 Doing well with money isn't necessarily about what you know. It's about how you behave. And behavior is hard to teach, even to really smart people. Money—investing, personal finance, and business decisions—is typically taught as a math-based field, where data and formulas tell us exactly what to do. But in the real world people don't make financial decisions on a spreadsheet. They make them at the dinner table, or in a meeting room, where personal history, your own unique view of the world, ego, pride, marketing, and odd incentives are scrambled together. In *The Psychology of Money*, award-winning author Morgan Housel shares 19 short stories exploring the strange ways people think about money and teaches you how to make better sense of one of life's most important topics.

Ten Worlds May 20 2020 Fresh on the heels of his phenomenally-received book, *The Undefeated Mind*, Dr. Lickerman and co-author Dr. EIDifrawi offer a whole new perspective on understanding and achieving happiness. In this highly engaging and eminently practical book-told in the form of a Platonic dialogue recounting real-life patient experiences- Drs. Lickerman and EIDifrawi assert that the reason genuine, longlasting happiness is so difficult to achieve and maintain is that we're profoundly confused not only about how to go about it, but also about what happiness is. In identifying nine basic erroneous views we all have about what we need to be happy-views they term the core delusions-Lickerman and EIDifrawi show us that our happiness depends not on our external possessions or even on our experiences but rather on the beliefs we have that shape our most fundamental thinking. These beliefs, they argue, create ten internal life-conditions, or worlds, through which we continuously cycle and that determine how happy we're able to be. Drawing on the latest scientific research as well as Buddhist philosophy, Lickerman and EIDifrawi argue that once we learn to embrace a correct understanding of happiness, we can free ourselves from the suffering the core delusions cause us and enjoy the kind of happiness we all want, the kind found in the highest of the Ten Worlds, the world of Enlightenment.
