Social Epidemiology Dec 13 2021 Social epidemiology is the study of how the social world influences -- and in many cases defines -- the fundamental determinants of health. This link was substantiated in the first edition of Social Epidemiology, and the generation of research that followed has fundamentally changed the way we understand epidemiology and public health. This much-awaited second edition elevates the field again, first by codifying the last decade of research, then by extending it to examine how public policies impact health. The new edition includes: ? 11 fully updated chapters, including entries on the links between health and discrimination, income inequality, social networks, and emotion ? Four all-new chapters on the role of policies in shaping health, including how to translate evidence into action with multi-level interventions ? Updated references, detailing the best research over the last two decades The result is a bold, brilliant text that will serve the new world of epidemiology in which scientists both observe health and design interventions to improve it. Social Epidemiology again sets an intellectual agenda and provides an essential foundation for those interested in social determinants of health around the world.

Clean, Green and Responsible? Dec 01 2020 New Zealand and Australia are broadly considered to be countries in which sustainability and responsibility discourses are being pursued by governments and business alike, and in which incentives and initiatives are helping confront and overcome sustainability-related challenges. This book takes a closer look behind and beyond the marketing mantras of both Australia's and New Zealand's "clean and green" campaigns and, on the basis of representative examples and cases, critically evaluates the status quo. The book assesses the effectiveness of sustainability and responsibility models with a focus on the South Pacific and argues that the ways in which issues have been dealt with in this more closely defined geographical region are most likely a good indicator of how similar issues are (or soon will be) dealt with around the globe. As such, the book offers a rich source of cases on sustainability and responsibility in the business arena, a critical review, and an inspirational affirmation of responsible business practice.

Convergence of Broadband, Broadcast, and Cellular Network Technologies Feb 03 2021 In the ever-evolving telecommunication industry, technological improvements alone are not able to keep up with the significant growth of mobile broadband traffic. As such, new research on communications networks is necessary to keep up with rising demand. *Convergence of Broadband, Broadcast, and Cellular Network Technologies* addresses the problems of broadband, broadcast, and cellular coexistence, including the increasing number of advanced mobile users and their bandwidth demands. This book will serve as a link between academia and industry, serving students, researchers, and industry professionals.

The papers are organized in topical sections on numerical modeling of fluids and structures; control and uncertain systems; Monte Carlo methods: theory, applications and distributed computing; theoretical and algorithmic advances in transport problems; applications of metaheuristics to large-scale problems; modeling and numerical simulation of processes in highly heterogeneous media; large-scale models: numerical methods, parallel computations and applications; numerical solvers on many-core systems; cloud and grid computing for resource-intensive scientific applications.

World Literacy Jan 14 2022 International literacy assessments have provided ample data for ranking nations, charting growth, and casting blame. Summarizing the findings of these assessments, which afford a useful vantage from which to view world literacy as it evolves, this book examines literate behavior worldwide, in terms of both the ability of populations from a wide variety of nations to read and the practice of literate behavior in those nations. Drawing on *The World's Most Literate Nations*, author Jack Miller's internationally released study, emerging trends in world literacy and their relationships to political, economic, and social factors are explored. Literacy, and in particular the practice of literate behaviors, is used as a lens through which to view countries' economic development, gender equality, resource utilization, and ethnic discrimination. Above all, this book is about trajectories. It begins with historical contexts, described in terms of support for literate cultures. Based on a variety of data sources, these trends are traced to the present and then projected ahead. The literate futures of nations are discussed and how these relate to their economic and sociocultural development. This book is unique in providing a broader perspective on an intractable problem, a vantage point that offers useful insights to inform policy, and in bringing together an array of relevant data sources not typically associated with literacy status.

Artificial Intelligence and Soft Computing Dec 21 2019 The two-volume set LNAI 7894 and LNCS 7895 constitutes the refereed proceedings of the 12th International Conference on Artificial Intelligence and Soft Computing, ICAISC 2013, held in Zakopane, Poland in June 2013. The 112 revised full papers presented together with one invited paper were carefully reviewed and selected from 274 submissions. The 56 papers included in the second volume are organized in the following topical sections: evolutionary algorithms and their applications; data mining; bioinformatics and medical applications; agent systems, robotics and control; artificial intelligence in modeling and simulation; and various problems of artificial intelligence.

Aristotelian Character Education Jan 02 2021 This book provides a reconstruction of Aristotelian character education, shedding new light on what moral character really is, and how it can be highlighted, measured, nurtured and taught in current schooling. Arguing that many recent approaches to character education understand character in exclusively amoral, instrumentalist terms, Kristjánsson proposes a coherent, plausible and up-to-date concept, retaining the overall structure of Aristotelian character education. After discussing and debunking popular myths about Aristotelian character education, subsequent chapters focus on the practical ramifications and methodologies of character education. These include measuring virtue and morality, asking whether Aristotelian character education can salvage the effects of bad upbringing, and considering implications for teacher training and classroom practice. The book rejuvenates time-honoured principles of the development of virtues in young people, at a time when 'character' features prominently in educational agendas and parental concerns over school education systems. Offering an interdisciplinary perspective which draws from the disciplines of education, psychology, philosophy and sociology, this book will appeal to researchers, academics and students wanting a greater insight into character education.
