depended on manual labour and simpler machines. The industrial revolution, otherwise known as the first industrial revolution, was a series of innovations in manufacturing processes that transformed rural agrarian European and American societies into industrialised and urban ones. This article will give further details about the industrial revolution within the context of the IAS exam. The industrial revolution began in Great Britain around the mid-1700s. Before then, families made what they needed at home. About the mid-1700s, businessmen began giving raw supplies such as newly picked cotton to families, with the whole family helping. They would then turn the supplies into things other people needed, like yarn. The industrial revolution was the transition to new manufacturing processes in Great Britain, Continental Europe, and the United States that occurred during the period from around 1760 to about 1820-1840. This transition included going from hand production methods to machines, new chemical manufacturing, and iron production processes. The industrial revolution began in Great Britain and then spread to France, Germany, the Netherlands, and other countries across the world. In a short time, the industrial revolution is noted as a very important event in the history of the world. The industrial revolution had impacts on almost every sector of the economy and society. The industrial revolution is one of the most important events to ever occur on this planet. Definitely top 3, it changed everything, but it had to start somewhere, and for the industrial revolution, that means Great Britain. British people aren't better than you see in 1776, but they had the perfect ingredients for this movement to begin. Heimlers' history notes that the industrial revolution begins with a variety of factors contributing to the growth of industrial production, and eventually, this process began in Britain in the 18th century and from there spread to other parts of the world. Although used earlier by French writers, the term industrial revolution was first popularized by the English economic historian Arnold Toynbee in 1852-83 to describe
