Mobilizing Knowledge in Physiotherapy Nov 15 2021 Mobilizing Knowledge in Physiotherapy: Critical Reflections on Foundations and Practices is a collection of 15 collaboratively written critical essays, by 39 authors from 15 disciplines and seven countries. The book challenges some of the most important contemporary assumptions about physiotherapy knowledge, and makes the case for much more critical theory, practice, and education in physiotherapy health and social care. The book challenges the kinds of thinking that have traditionally bounded the profession and highlights the ways in which knowledge is now increasingly fluid, complex, and diffuse. The collection engages a range of critical social theories and interdisciplinary perspectives from within and without the profession. It includes sections focusing on evidence, practice, patient perspectives, embodiment, culture,

diversity, digital worlds, and research methods. The book makes an important contribution to how we think about mobilizing knowledge, and it speaks to a diverse audience of academics, practitioners, educators, policy-makers, and students - both within physiotherapy and from a range of related health and social care disciplines. This book will be a useful reference for scholars interested in conceptions of professional knowledge, and the theory of professional education and practice in physiotherapy and beyond.

The Oxford Handbook of Disability History Dec 25 2019 This Handbook brings together twenty-nine authors from around the world, each expert in a different area within the history of disability. This collection of new and original essays forms a benchmark in a field of historical inquiry that has been growing and maturing over the last thirty years. It is the first book to gather critical essays that incorporate studies from South and East Asia, eastern and western Europe, Australia, North America, and the Arab world. This Handbook is unique among other disability history texts in that it engages simultaneously in methodological and historiographic debates and in a further articulation and analysis of the lived experiences of disabled people.

The 'Go-To' Physio Nov 27 2022 The traditional approach that Dave O'Sullivan was taught in University was to look at the site of pain, perform some mobilisations if appropriate and then load the area, usually with eccentrics. But what happens when you use this approach with REAL LIFE patients? Dave noticed some patients responded and got better SLOWLY with time, but he also noticed others didn't respond as the textbooks would have us believe. But what if there was another way to look at the human body that considered the whole person in front of you and not just the site of pain? This book is that alternative and Dave O'Sullivan - the current England Rugby League Physiotherapist outlines his 12-step (tried and tested in the professional sport) return to play/discharge method that he uses to get consistent results with both professional athletes and his own private practice patients. This method will allow you to ETHICALLY rapidly raise your Retention, Rates, Referrals, Revenue, AND Reputation so you can become THE 'Go-To' Physio in your town by getting consistent, long-lasting results that have a meaningful impact on your patients' lives.

Steps to Follow Dec 05 2020 This new edition of a best-selling guide incorporates significant advances in the early and later rehabilitation of neurologically impaired patients. Based on the Bobath concept, Davies' approach to rehabilitation stresses the need to equip the patient for a full life, rather than setting arbitrary goals for functioning in a sheltered environment. Activities are described for correcting abnormal movement patterns and facial difficulties. Ways to regain walking, balance and other

normal movement sequences are explained and demonstrated with 750 photographs of patients being treated.

Understanding Physiotherapy Research Dec 17 2021 Understanding Physiotherapy Research by Littlewood and May is an introductory level text that aims to be accessible and understandable to all physiotherapists who appreciate the need to integrate research evidence into their practice. The requirement for physiotherapists to engage with evidence-based practice has never been more apparent and the benefits of such an approach are clear. Evidence derived from research is a cornerstone of evidence-based practice, but before such evidence can be incorporated into an evidence-based paradigm, it should be appraised and its trustworthiness and applicability considered. This means that evidence-based physiotherapy practitioners need to be aware of the inherent strengths and limitations of research studies and what these mean for their practice. However, this is not always a straightforward process and it is not uncommon for both novice and experienced physiotherapists to become lost in the language of research. To facilitate the evolution of evidence-based physiotherapy practice, this book aims to bridge the gap by presenting a clinically focused range of methodological discussions in relation to specific research study designs in physiotherapy. The intention of the book is to offer a platform upon which readers can develop their understanding of meaningful critical appraisal and consequently gain confidence when reading published research.

Attitudes and Beliefs of Physiotherapists Regarding Low Back Pain: a Cross-sectional Study Sep 13 2021 Background: Health care practitioners attitudes and beliefs can have a biomedical or biopsychosocial orientation. Current development in physiotherapy presents a more biopsychosocial orientation in the management of low back pain (LBP). The treatment outcome of the patients can be affected by the attitudes and beliefs of the physiotherapists. Objectives: The aim of this study is to examine how attitudes and beliefs of physiotherapists in Flanders about LBP are orientated and if their personal history of LBP influences physiotherapists attitudes and beliefs.

Subsequently the influence of time since graduation in the attitudes and beliefs of physiotherapists is investigated. Methods: A total of 210 physiotherapists participated in this study. They completed the Health Care Providers Pain And Impairment Relationship Scale (HC-PAIRS), the Pain Attitudes and Beliefs Scale for Physiotherapists (PABS.pt) and a clinical case (vignette). Data was imported into IBM SPSS Statistics 23 for statistical analysis. Results: Only 22% of the physiotherapists answered guideline-consistent for work recommendation and 67% of the physiotherapists

answered guideline-consistent for daily activities. The HC-PAIRS, the PABS.pt and the vignette showed no significant differences in attitudes and beliefs when LBP occurred among physiotherapists. The biomedical subscale of PABS.pt and HC-PAIRS had a significant positive correlation (p\

Anatomy and Physiology for Physiotherapists May 10 2021 `Since the change in physiotherapy training there has been a need for a concise textbook in anatomy and physiology relevant to the needs of the physiotherapist. Professor Moffat and Dr Mottram must be complimented on the publication of their book fulfilling this need. The book is well presented in both format and style ... The style of writing is concise and easy to read. The factual information in both anatomy and physiology is relevant ... Each chapter presents information as a complete topic, linking well the relevant anatomy and physiotherapy of that topic ... The publication provides the student with both a reference textbook and a good learning aid ...

Understanding and thus learning is further reinforced by the presence of clear diagrams complementing the text. The student will be pleased to find a book which presents all the relevant information for the Part 1 examination and is easy to carry about for `bus stop' revision. Qualified physiotherapists will also find it useful in departmental libraries for both quick reference and revision.' Physiotherapist (on the first edition). Touch is Really Strange Nov 03 2020 Why can't we tickle ourselves? How can slow touch convey more powerful emotions than fast touch? How does touch shape our perception of the world? The latest addition to the Really Strange series, this science-based graphic comic addresses these questions and more, revealing the complexity of touch and exploring its power and limits. Used positively, touch can change pain and trauma, communicate compassion and love and generate social bonding. Get it wrong and it can be abusive and terrifying. Touch helps us feel real. Knowledge comes through our body as we engage with space and with others. Before we have language, our concepts are formed as we meet a world full of edges and textures. Touch is Really Strange celebrates the power of inward touch (interoception) and looks at how we can use skilful contact to promote feelings of joy, connection and vitality.

Diagnostic Imaging and Radiology in Physiotherapy Jul 24 2022 Imaging diagnostics is now becoming an important and indispensable element of qualifications for physiotherapy and planning the process of physiotherapy and rehabilitation. It is a valuable complement to, and sometimes the basis for, tests or designation of various goals of physiotherapy. It is also the basis of any knowledge about the skilful and reliable use of selected methods of physiotherapy. This volume addresses the need of the moment regarding the lack of comprehensive studies across the globe concerning the use of imaging diagnostics in the physiotherapy process. It will not only contribute to a more complete functional assessment of the patient in comprehensive physiotherapy processes, but will also be the basis for the emergence of a diagnostic standard in the treatment of the patient. This is all the more important because the ever-increasing independence of the physiotherapist's profession is burdened with huge, progressive responsibility.

The ESC Textbook of Intensive and Acute Cardiovascular Care Mar 27 2020 The ESC Textbook of Intensive and Acute Cardiovascular Care is the official textbook of the Acute Cardiovascular Care Association (ACVC) of the ESC. Cardiovascular diseases (CVDs) are a major cause of premature death worldwide and a cause of loss of disability-adjusted life years. For most types of CVD early diagnosis and intervention are independent drivers of patient outcome. Clinicians must be properly trained and centres appropriately equipped in order to deal with these critically ill cardiac patients. This new updated edition of the textbook continues to comprehensively approach all the different issues relating to intensive and acute cardiovascular care and addresses all those involved in intensive and acute cardiac care, not only cardiologists but also critical care specialists, emergency physicians and healthcare professionals. The chapters cover the various acute cardiovascular diseases that need high quality intensive treatment as well as organisational issues, cooperation among professionals, and interaction with other specialities in medicine. SECTION 1 focusses on the definition, structure, organisation and function of ICCU's, ethical issues and quality of care. SECTION 2 addresses the pre-hospital and immediate in-hospital (ED) emergency cardiac care. SECTIONS 3-5 discuss patient monitoring, diagnosis and specific procedures. Acute coronary syndromes (ACS), acute decompensated heart failure (ADHF), and serious arrhythmias form SECTIONS 6-8. The main other cardiovascular acute conditions are

grouped in SECTION 9. Finally SECTION 10 is dedicated to the many concomitant acute non-cardiovascular conditions that contribute to the patients' case mix in ICCU. This edition includes new chapters such as low cardiac output states and cardiogenic shock, and pacemaker and ICDs: troubleshooting and chapters have been extensively revised. Purchasers of the print edition will also receive an access code to access the online version of the textbook which includes additional figures, tables, and videos to better to better illustrate diagnostic and therapeutic techniques and procedures in IACC. The third edition of the ESC Textbook of Intensive and Acute Cardiovascular Care will establish a common basis of knowledge and a uniform and improved quality of care across the field.

Management of Spinal Cord Injuries Mar 08 2021 Combining 25 years of clinical, research and teaching experience, Dr Lisa Harvey provides an innovative 5-step approach to the physiotherapy management of people with spinal cord injury. Based on the International Classification of Functioning, this approach emphasises the importance of setting goals which are purposeful and meaningful to the patient. These goals are related to performance of motor tasks analysed in terms of 6 key impairments. The assessment and treatment performance of each of these impairments for people with spinal cord injury is described in the following chapters: training motor tasks strength training contracture management pain management respiratory management cardiovascular fitness training Dr Harvey develops readers' problem-solving skills equipping them to manage all types of spinal cord injuries. Central to these skills is an understanding of how people with different patterns of paralysis perform motor tasks and the importance of different muscles for motor tasks such as: transfers and bed mobility of people wheelchair mobility hand function for people with tetraplegia standing and walking with lower limb paralysis This book is for students and

junior physiotherapists with little or no experience in the area of spinal cord injury but with a general understanding of the principles of physiotherapy. It is also a useful tool for experienced clinicians, including those keen to explore the evidence base that supports different physiotherapy interventions.

Rehabilitation Methodology and Strategies Jun 30 2020 This book explores rehabilitation methodology in Evidence Based Medicine (EBM), providing a description of the main traditional strategies used by physiotherapists. It supplies both physiotherapists and students with updated information on scientific professional choices for the patient's benefit by collecting traditional knowledge and trying to answer a fundamental question: is there an objective way of rehabilitating patients by using traditional concepts at the light of new evidences? Every physiotherapist experiences the need of updating his knowledge and professional actions. Research can help but personal experience remains fundamental for clinical reasoning. The book examines rehabilitation strategies, main rehabilitation techniques, as well as scientific practice and suggestions stemming from research. The various rehabilitation strategies and techniques converge in the daily work becoming the basis for operative choices finalized to solve the patient's needs. Methodology characterizes the work of a physiotherapist who should take care of his scientific education by means of effective teaching plans, educational rules and ethic professional code. This book will be a useful tool for physiotherapy students but also for professionals.

Clinical Assessment Skills for Physiotherapists and Occupational Therapists/Allied Health Professionals Oct 15 2021

The End of Physiotherapy Oct 27 2022 Physiotherapy is arriving at a critical point in its history. Since World War I, physiotherapy has been one of the largest allied health professions and the established provider of orthodox physical rehabilitation. But ageing populations of increasingly chronically ill people, a growing scepticism towards biomedicine and the changing economy of healthcare threaten physiotherapy's long-held status. Paradoxically, physiotherapy's affinity for treating the 'body-as-machine' has resulted in an almost complete inability to identify the roots of the profession's present problems, or define possible ways forward. Physiotherapists need to engage in critically informed theoretical discussion about the profession's past, present and future - to explore their practice from economic, philosophical, political and sociological perspectives. The End of Physiotherapy aims to explain how physiotherapy has arrived at this critical point in its history, and to point to a new future for the profession. The book draws on critical analyses of the historical and social conditions that have made present-day physiotherapy possible. Nicholls examines some of the key discourses that have had a positive impact on the profession in the past, but now threaten to derail it. This book makes it

possible for physiotherapists to think otherwise about their profession and their day-to-day practice. It will be essential reading for scholars and students of physiotherapy, interprofessional and community rehabilitation, as well as appealing to those working in medical sociology, the medical humanities, medical history and health care policy.
