Hearings, Ninety-third Congress, First Session, on S. 974 ... S. 878 ... S.J. Res. 71 .. Medical Tourism Health, Trade and Human Rights Big Data, Databases and "Ownership" Rights in the Cloud Clinical Data Mining for Physician Decision Making and Investigating Health Outcomes: Methods for Prediction and Analysis Proceedings of the First Social Science and Medicine Africa Network International Conference Proceedings of First International Conference on Smart System, Innovations and Computing HIV/AIDS and the South African State

This work contains forewords by Desmond M. Tutu, Archbishop Emeritus, Cape Town, South Africa and Mogobe Ramose, Chairperson and Professor of Philosophy, Department of Philosophy, University of South Africa. "Health, Trade and Human Rights" shows how a policy of 'free' rather than 'fair' trade increasingly undermines Third World health. It clearly illustrates how the looming environmental crisis combined with growing levels of health inequity will have adverse effects and details precisely how the 'basic human rights' enshrined in the UN Charter have gradually become subsidiary to the dictates of free trade, enforced by the World Trade Organisation. This groundbreaking new book argues the need for impartial, data-based, and transnational arbitration of equity in health and other human rights - and suggests how this might be accomplished without violence to national rights, with an emphasis on 'regional free trade'. "Health, Trade and Human Rights" provides vital, thought provoking information for general readers with an interest in the Third World and social welfare. Academics and students studying development, international studies and public health will find it invaluable, as will healthcare professionals, international healthcare organisations, care agencies, and international charities. Policy makers and shapers in communities and government will find the content revelatory as will political activists and those with an interest in equality and globalisation. [The book] criticises the basis, the method and the extent to which the politics of wealth continues to undermine and violate the right of the poor to good health. The combination of experience with scientific rigour is presented in accessible everyday language. It is seductive; inviting the curiosity of the reader to last until the very end of the book. MacDonald's message is clear and unambiguous: war is no longer the father of all things. Instead, justice is the mother of all peace.' - Mogobe Ramose, in his Foreword. 'Astonishingly accessible, informing and inspiring. Statistically sound, penetratingly accurate, admirably balanced. Theodore MacDonald writes with passion, as well as with sense. Much of what he has to say is drawn from his own experience working as a medical doctor and a mathematician in a broad range of the world's poorest nations. But overarching that is a powerful insight into social and economic issues, along with well-honed skills as a communicator. I am pleased to recommend this splendid book.' - Desmond M. Tutu, in his Foreword. Protecting and promoting health is inherently a political endeavor that requires a sophisticated understanding of the distribution and use of power. Yet while the global nature of health is widely recognized, its political nature is less well understood. In recent decades, the interdisciplinary field of global health politics has emerged to demonstrate the interconnections of health and core political topics, including foreign and security policy, trade, economics, and development. Today a growing body of scholarship examines how the global health landscape has both shaped and been shaped by political actors and structures. The Oxford Handbook of Global Health Politics provides an authoritative overview and assessment of research on this important and complicated subject. The volume is motivated by two arguments. First, health is not simply a technical subject, requiring evidence-based solutions to real-world problems, but an arena of political contestation where norms, values, and interests also compete and collide. Second, globalization has fundamentally changed the nature of health politics in terms of the ideas, interests, and institutions involved. The volume comprises more than 30 chapters by leading experts in global health and politics. Each chapter provides an overview of the state of the art on a given theoretical perspective, major actor, or global health issue. The Handbook offers both an excellent introduction to scholars new to the field and also an invaluable teaching and research resource for experts seeking to understand global health politics and its future directions. The WHO Guidelines on Hand Hygiene in Health Care provide health-care workers (HCWs), hospital administrators and health authorities with a thorough review of evidence on hand hygiene in health care and specific recommendations to improve practices and reduce transmission of pathogenic microorganisms to patients and HCWs. The present Guidelines are intended to be implemented in any situation in which health care is delivered either to a patient or to a specific group in a population. Therefore, this concept applies to all settings where health care is permanently or occasionally performed, such as home care by birth attendants. Definitions of health-care settings are proposed in Appendix 1. These Guidelines and the associated WHO Multimodal Hand Hygiene Improvement Strategy and an Implementation Toolkit (<http://www.who.int/gpsc/en/>) are designed to offer health-care facilities in Member States a conceptual framework and practical tools for the application of recommendations in practice at the bedside. While ensuring consistency with the Guidelines recommendations, individual adaptation according to local regulations, settings, needs, and resources is desirable. This extensive review includes in one document sufficient technical information to support training materials and help plan implementation strategies. The document comprises six parts. For three decades post-apartheid, the HIV/AIDS epidemic from first acknowledgement to its management as a chronic disease, demanded unparalleled attention. This was nowhere more evident than in South Africa. This book explores how the state responded to its responsibilities to defend and protect (human) security. Linking this to the role of the state as sovereign protector and provider of security, it applies the findings to the broader re-interpretation of sovereign responsibility in the 21st Century. This book does not seek to absolve the South African state of its responsibility to respond. Moreover, it argues that although the state, the government, before, during, and after the transition to democracy, was aware of and acknowledged the threat - political, economic and social - posed by the epidemic, it nonetheless chose not to make the epidemic a priority policy issue. As a result, it argues that the South African HIV/AIDS case illustrates the tension inherent between a state's ultimate sovereign responsibility to respond and its tactical dependence on external contributors to meet the demands of all of its constituents. Two of the most important developments of this new century are the emergence of cloud computing and big data. However, the uncertainties surrounding the failure of cloud service providers to clearly assert ownership rights over data and databases during cloud computing transactions and big data services have been perceived as imposing legal risks and transaction costs. This lack of clear ownership rights is also seen as slowing down the capacity of the Internet market to thrive. Click-through agreements drafted on a take-it-or-leave-it basis govern the current state of the art, and they do not allow much room for negotiation. The novel contribution of this book proffers a new contractual model advocating the extension of the negotiation capabilities of cloud customers, thus enabling an automated and machine-readable framework, orchestrated by a cloud broker. Cloud computing and big data are constantly evolving and transforming into new paradigms where cloud brokers are predicted to play a vital role as innovation intermediaries adding extra value to the entire life cycle. This evolution will alleviate the legal uncertainties in society by means of embedding legal requirements in the user interface and related computer systems or its code. This book situates the theories of law and economics and behavioral law and economics in the context of cloud computing and takes database rights and ownership rights of data as prime examples to represent the problem of collecting, outsourcing, and sharing data and databases on a global scale. It does this by highlighting the legal constraints concerning ownership rights of data and databases and proposes finding a solution outside the boundaries and limitations of the law. By allowing cloud brokers to establish themselves in the market as entities coordinating and actively engaging in the negotiation of service-level agreements (SLAs), individual customers as well as small and medium-sized enterprises could efficiently and effortlessly choose a cloud provider that best suits their needs. This approach, which the author calls "plan-like architectures," endeavors to create a more trustworthy cloud computing environment and to yield radical new results for the development of the cloud computing and big data markets. This volume contains 59 papers presented at ICTIS 2015: International Conference on Information and Communication Technology for Intelligent Systems. The conference was held during 28th and 29th November, 2015, Ahmedabad, India and organized communally by Venus International College of Technology, Association of Computer Machinery, Ahmedabad Chapter and Supported by Computer Society of India Division IV – Communication and Division V – Education and Research. This volume contains papers mainly focused on ICT for Computation, Algorithms and Data Analytics etc. Proceedings of the First International Workshop on Pulmonary Image Analysis, held on September 6, 2008 in New York as part of the MICCAI workshop program. This book describes for readers technology used for effective sensing of our physical world and intelligent processing techniques for sensed information, which are essential to the success of the Internet of Things (IoT). The authors provide a multidisciplinary view of sensor technology from MEMS, biological, chemical, and electrical domains and showcase smart sensor systems in real applications including smart home, transportation, medical, environmental, agricultural, etc. Unlike earlier books on sensors, this book provides a "global" view on smart sensors covering abstraction levels from device, circuit, systems, and algorithms. Medical and health tourism is a significant area of growth in the export of related services. This text addresses the substantial political, philosophical and ethical issues that arise out of these transnational practices. This book elaborates on the topics covered by top experts in the field of drug testing at an international symposium held in March, 1990. The book is an excellent reference for all professionals involved in the set up, performance and interpretation of results for drug testing programs using biological fluids (especially urine). U.S. and European perspectives are presented in relation to workplace testing. Organizational aspects for reliability of drug testing include topics ranging from sample collection, chain of custody, and laboratory strategies to legal and regulatory aspects. Critical reviews of analytical methodology involve descriptions and critical issues for the major presumptive and confirmatory techniques, including immunological and gas chromatographic-mass spectrometric methodologies. The book's interpretation of results takes into account the metabolic, pharmacokinetic,

pharmacodynamic and clinical aspects. The final chapters of the book include topics addressing aspects for potential international harmonization. How do you design personalized user experiences that delight and provide value to the customers of an eCommerce site? Personalization does not guarantee high quality user experience: a personalized user experience has the best chance of success if it is developed using a set of best practices in HCI. In this book 35 experts from academia, industry and government focus on issues in the design of personalized web sites. The topics range from the design and evaluation of user interfaces and tools to information architecture and computer programming related to commercial web sites. The book covers four main areas: -Theoretical, Conceptual, and Architectural Frameworks of Personalization, -Research on the Design and Evaluation of Personalized User Experiences in Different Domains, -Approaches to personalization Through Recommender Systems, -Lessons Learned and Future Research Questions. This book will be a valuable tool in helping the reader to understand the range of factors to take into consideration in designing and building a personalized user experience. The authors of each of the chapters identify possibilities and alert the reader to issues that can be addressed in the beginning of a project by taking a 'big picture' view of designing personalized user interfaces. For anyone working or studying in the field of HCI, information architecture or eCommerce, this book will provide a solid foundation of knowledge and prepare for the challenges ahead. eHealth 2008, the First International Conference on Electronic healthcare for the twenty-first century, was held in City University, London, during September 8–9, 2008. The conference was organized as a meeting point for telecare product vendors, policy makers, government ministers, academics, clinicians and all those involved in electronic and mobile health, to examine and to share ideas contributing to the advancement of electronic healthcare into the twenty-first century. The conference had a huge success with a large number of paper submissions. Ninety-seven papers were submitted, of which 32 were selected for presentation. Each paper was carefully reviewed blindly by a minimum of three referees from the respective field. A special thanks should go to the Technical Program Committee for their hard and efficient work in the review process. In addition to the submitted contributions, the conference included a business presentation track with 12 invited talks by key people in the world of eHealth. The business presentation track was chaired by Sir Jonathan Michael (Deputy Director, BT Health). The success of this conference is to be credited to the contribution of many people. This book includes high-quality papers presented at Proceedings of First International Conference on Computational Electronics for Wireless Communications (ICWC 2021), held at National Institute of Technology, Kurukshetra, Haryana, India, during June 11–12, 2021. The book presents original research work of academics and industry professionals to exchange their knowledge of the state-of-the-art research and development in computational electronics with an emphasis on wireless communications. The topics covered in the book are radio frequency and microwave, signal processing, microelectronics and wireless networks. The edited volume contains original papers contributed to 1st International Conference on Smart System, Innovations and Computing (SSIC 2017) by researchers from different countries. The contributions focuses on two main areas, i.e. Smart Systems Innovations which includes applications for smart cities, smart grid, social computing and privacy challenges with their theory, specification, design, performance, and system building. And second Computing of Complex Solutions which includes algorithms, security solutions, communication and networking approaches. The volume provides a snapshot of current progress in related areas and a glimpse of future possibilities. This volume is useful for researchers, Ph.D. students, and professionals working in the core areas of smart systems, innovations and computing. This book constitutes the refereed proceedings of the Second International Conference on Distributed, Ambient, and Pervasive Interactions, DAPI 2014, held as part of the 16th International Conference on Human-Computer Interaction, HCII 2014, held in Heraklion, Crete, Greece in June 2014, jointly with 13 other thematically conferences. The total of 1476 papers and 220 posters presented at the HCII 2014 conferences were carefully reviewed and selected from 4766 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of Human-Computer Interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The 58 papers included in this volume are organized in topical sections on design frameworks and models for intelligent interactive environments; natural interaction; cognitive, perceptual and emotional issues in ambient intelligence; user experience in intelligent environments; developing distributed, pervasive and intelligent environments; smart cities. "This book shows how the investigation of healthcare databases can be used to examine physician decisions to develop evidence-based treatment guidelines that optimize patient outcomes"--Provided by publisher. In today's increasingly interconnected and global society, the protection of basic liberties is an important consideration in public policy and international relations. Profitable social interactions can begin only when a foundation of trust has been laid between two parties. Human Rights and Ethics: Concepts, Methodologies, Tools, and Applications considers some of the most important issues in the ethics of human interaction, whether in business, politics, or science and technology. Covering issues such as cybercrime, bioethics, medical care, and corporate leadership, this four-volume reference work will serve as a crucial resource for leaders, innovators, educators, and other personnel living and working in the modern world. User-Driven Healthcare: Concepts, Methodologies, Tools, and Applications provides a global discussion on the practice of user-driven learning in healthcare and connected disciplines and its influence on learning through clinical problem solving. This book brings together different perspectives for researchers and practitioners to develop a comprehensive framework of user-driven healthcare. Research Paper (undergraduate) from the year 2020 in the subject Health - Health system, , language: English, abstract: The study attempts to explore the impact and challenges of PHC delivery system with the intension of generating data for policy and planning. The goal of primary health care (PHC) was to provide accessible health for all by the year 2020 and beyond. Unfortunately, this is yet to be achieved in Nigeria and seems to be unrealistic in the next decade. The PHC aims at providing people of the world with the basic health services. Though PHC centers were established in both rural and urban areas in Nigeria with the intention of equity and easy access, regrettably, the rural populations in Nigeria are seriously underserved when compared with their urban counterparts. About two-thirds of Nigerians reside in rural areas therefore they deserve to be served with all the components of PHC. Primary health care, which is supposed to be the bedrock of the country's health care policy, is currently catering for less than 20% of the potential patients. While most PHC facilities are in various state of disrepair, with equipment and infrastructure being either absent or obsolete, the referral system is almost non-existent. The goal of the National Health Policy (1987) is to bring about a comprehensive health care system, based on primary health care that is promotive, protective, preventive, restorative and rehabilitative to all citizens within the available resources so that individuals and communities are assured of productivity, social well-being and enjoyment of living. The health services, based on PHC, include among other things: education concerning prevailing health problems and the methods of preventing and controlling them, promotion of food supply and proper nutrition, maternal and child care, including family planning immunization against the major infectious diseases, prevention and control of locally endemic and epidemic diseases and provision of essential drugs and supplies. The provision of health care at PHC level is largely the responsibility of local governments with the support of state ministries of health and within the overall national health policy. Private medical practitioners also provide health care at this level. Uninsured in America goes to the heart of why more than forty million Americans are falling through the cracks in the health care system, and what it means for society as a whole when so many people suffer the consequences of inadequate medical care. Based on interviews with 120 uninsured men and women and dozens of medical providers, policymakers, and advocates from around the nation, this book takes a fresh look at one of the most important social issues facing the United States today. A new afterword updates the stories of many of the people who are so memorably presented here. "Offering enterprise resource planning (ERP) deployment strategies for information as diverse as patient records, police and community relations, and geospatial services, this text addresses the complex issues that information and communication technologies pose for small, midsize, and large organizations. Provided are recent research findings as well as practical assessments and suggestions for managers." This volume contains 60 papers presented at ICTIS 2015: International Conference on Information and Communication Technology for Intelligent Systems. The conference was held during 28th and 29th November, 2015, Ahmedabad, India and organized communally by Venus International College of Technology, Association of Computer Machinery, Ahmedabad Chapter and Supported by Computer Society of India Division IV – Communication and Division V – Education and Research. This volume contains papers mainly focused on ICT and its application for Intelligent Computing, Cloud Storage, Data Mining, Image Processing and Software Analysis etc. This book presents original research works by researchers, engineers and practitioners in the field of artificial intelligence and cognitive computing. The book is divided into two parts, the first of which focuses on artificial intelligence (AI), knowledge representation, planning, learning, scheduling, perception-reactive AI systems, evolutionary computing and other topics related to intelligent systems and computational intelligence. In turn, the second part focuses on cognitive computing, cognitive science and cognitive informatics. It also discusses applications of cognitive computing in medical informatics, structural health monitoring, computational intelligence, intelligent control systems, bio-informatics, smart manufacturing, smart grids, image/video processing, video analytics, medical image and signal processing, and knowledge engineering, as well as related applications. The book is a collection of research papers presented at the First International Conference on International Conference on Ambient Intelligence in Health Care (ICAIHC 2021) organized by Institute of Technical Education and Research, Siksha 'O' Anusandhan (Deemed to be University) University, Bhubaneswar, India, during April 15–16, 2022. It includes papers in the research area of e-health care, telemedicine, other medical technologies, life support systems, fast detection and diagnoses, developed technologies and innovative solutions, bioinformatics, and solutions for monitoring smart intelligent systems in health care. As information systems become ever more pervasive in an increasing number of fields and professions, workers in healthcare and medicine must take into consideration new advances in technologies and infrastructure that will better enable them to treat their patients and serve their communities. Healthcare Administration: Concepts, Methodologies, Tools, and Applications brings together recent research and case studies in the medical field to explore topics such as hospital management, delivery of patient care, and telemedicine, among others. With a focus on some of the most groundbreaking new developments as well as future trends and critical concerns, this three-volume reference source will be a significant tool for medical practitioners, hospital managers, IT administrators, and others actively engaged in the healthcare field. Although the standards in electronic health records and general healthcare services continue to evolve, many organizations push to connect interoperability with public service and basic citizenship rights. This poses significant technical and organizational challenges that are the focus of many research and standardization efforts. Interoperability in Healthcare Information Systems: Standards, Management and Technology provides a comprehensive collection on the overview of electronic health records and health services interoperability and the different aspects representing its outlook in a framework that is useful for practitioners, researchers, and decision-makers. The COVID-19 pandemic is only the latest prompt about the importance of international health and its broad influence upon social wellbeing. The COVID-19 pandemic has highlighted the need for an informed and coordinated effort to achieve international healthcare equity. Leaders in international health must be conversant in its issues. Contemporary Issues in Global Medicine and Moving Toward International Healthcare Equity provides an understanding of contemporary issues in international medicine. It explores the impact of civil unrest on population health and provides practical strategies for providing clinical care in low resource settings. Covering topics such as international public health, maternal health, and drug resistance, this book is an essential resource for government officials, medical officials, physicians, nurses, social workers, sociologists, epidemiologists, medical students, students and educators of higher education, researchers, and academicians. First International Workshop on Data Management and Analytics for Medicine and Healthcare Sep 04, 2015-Sep 04, 2015 Waikoloa, USA. You can view more information about this proceeding and all of ACM's other published conference proceedings from the ACM Digital Library: <http://www.acm.org/dl>. This book gathers high-quality papers presented at the First International Conference on Sustainable Technologies for Computational Intelligence (ICTSCI 2019), which was organized by Sri Balaji College of Engineering and Technology, Jaipur, Rajasthan, India, on March 29–30, 2019. It covers emerging topics in computational intelligence and effective strategies for its implementation in engineering applications. In addition to creating the opportunity for collaboration, transformation, and innovation in the healthcare industry, technology plays an essential role in the development of human well-being and psychological growth. Handbook of Research on ICTs for Human-Centered Healthcare and Social Services is a comprehensive collection of relevant research on technology and its developments of ICTs in healthcare and social services. This book focuses on the emerging trends in the social and healthcare sectors such as social networks, security of ICTs, and advisory services, beneficial to researchers, scholars, students, and practitioners to further their interest in technological advancements. This book presents the most recent scientific and technological advances in the fields of engineering mathematics and computational science, to strengthen the links in the scientific community. It is a collection of high-quality,

peer-reviewed research papers presented at the First International Conference on Mathematical Modeling and Computational Science (ICMMCS 2020), held in Pattaya, Thailand, during 14–15 August 2020. The topics covered in the book are mathematical logic and foundations, numerical analysis, neural networks, fuzzy set theory, coding theory, higher algebra, number theory, graph theory and combinatorics, computation in complex networks, calculus, differential equations and integration, application of soft computing, knowledge engineering, machine learning, artificial intelligence, big data and data analytics, high-performance computing, network and device security, and Internet of things (IoT). This book gathers selected papers from the First International Symposium on Bioinformatics and Biomedicine. Issues related to medicine and health care constitute one of the grand challenges faces by the mankind, and this naturally implies a growing interest in these problems among both researchers and scholars, politicians and policymakers, as well as economist. The present values which gather selected papers from the First International Symposium on Bioinformatics and Biomedicine (BioInfoMed'2020) is a recent response to this interests. In the subsequent sections and chapters, it covers a multitude of various topics related to bioinformatics, biomedicine, bioengineering, as well as a broadly perceives healthcare. Issues related to decision making in bioinformatics, biomedicine and health care, mathematical modelling in biomedicine and health care, artificial intelligence in biomedicine and health care, uncertainty and imprecision, notably intuitionistic fuzzy sets with applications in bioinformatics and biomedicine, biomedical approaches and applications, biomedical imaging and image processing, and excitable structures and motor activity are covered. The book covers a wide range of topics in Computer Science and Information Technology including swarm intelligence, artificial intelligence, evolutionary algorithms, and bio-inspired algorithms. It is a collection of papers presented at the First International Conference on Intelligent Computing and Communication (ICIC2) 2016. The prime areas of the conference are Intelligent Computing, Intelligent Communication, Bioinformatics, Geo-informatics, Algorithm, Graphics and Image Processing, Graph Labeling, Web Security, Privacy and e-Commerce, Computational Geometry, Service Orient Architecture, and Data Engineering.
