Jay Samuels, Barbara Taylor, Joanna P. Williams, Kathleen Wilson "Pearson and Hiebert have long advocated for children in schools, and this volume is no exception. They and their chapter authors situate the CCSS within the historical and policy context in which it was written and support the literacy education community as we wrestle with the implications the standards have for research, for teachers, for teaching, and for learning." —Sharon Walpole, University of Delaware "This book gets way beyond generalities and polemics about the Common Core, taking a deep and measured dive into a wide range of essential topics within the standards. I read a lot, and I can't think of the last time I read anything about the CCSS as engaging and thought provoking as this." —Nell K. Duke, University of Michigan Thorough and accessible, this professional resource and text shows how the latest research in adolescent literacy can be translated into effective practice in middle and high school classrooms. Leading authorities discuss findings on the adolescent learner, addressing such essential topics as comprehension, content-area literacy, differentiated instruction, gender differences in literacy learning, and English language learners. With a focus on evidence-based methods, coverage ranges from techniques for building digital literacy and comprehension skills to strategies for flexible grouping and writing instruction. Ideal for courses in adolescent literacy, each chapter includes guiding questions, discussion questions, and classroom examples. In this volume, two notable scholars trace the monumental shifts in theory, research, and practice related to reading education and literacy, with particular attention to what they consider the central goal of literacy—making meaning. Each section describes a specific epoch, including a brief snapshot of how the reader of that period is envisioned and characterized by researchers and teachers, as well as a deep discussion of the ideas and contextual events of that era. These developmental waves are organized in rough historical sequence by a series of shifts in underlying theoretical and scholarly lenses—from the behavioral to the psycholinguistic to the cognitive to the sociocultural to the critical to the multimodal to the global. The book closes with a discussion of the various research frames and methodological approaches that paralleled these developments. Throughout, there is a profound recognition that all research and practice are ultimately directed toward how students make meaning, from sound to letter to word, to ideas and images. Book Features: Animates some of the revolutionary developments related to reading education and literacy in modern times. Each development is accompanied by a discussion of the aspirational reader that sets the stage for contemplating these shifts and their significance. Traces the research and theoretical developments to illustrate the origins of the shifts and their influences. Supported by a website with video lectures and conversations tied to the various waves of development. Doug Buehl strips away the one-size-fits-all approach to content area literacy and presents a much-needed instructional model for disciplinary literacy, showing how to mentor middle and high school learners to become "academic insiders" who are college and career ready. This thoroughly revised second edition of Developing Readers in the Academic Disciplines shows how to help students adjust their thinking to comprehend a range of complex texts that fall outside their reading comfort zones. This book --a natural companion to Buehl's Classroom Strategies for Interactive Learning, which has been bolstering student comprehension for almost three decades--provides the following supports for teachers: Instructional tools that adapt generic literacy practices to discipline-specific variations Strategies for frontloading instruction to activate and build background knowledge New approaches for encouraging inquiry around disciplinary texts In-depth exploration of the role of argumentation in informational text Numerous examples from science, mathematics, history and social studies, English/language arts, and related arts to show you what vibrant learning looks like in various classroom settings Developing Readers in the Academic Disciplines introduces teachers from all disciplines to new kinds of thinking and, ultimately, teaching that helps students achieve new levels of understanding. An integrated language arts approach to literacy development that brings early childhood perspectives on how children learn in pre-kindergarten through grade three, together with explicit teaching of literacy skills and strategies teachers need to make it all work. Pre-service and in-service teachers get a wealth of valuable information for making children active participants in the process of literacy development with this integrated approach to language arts. The book encourages teaching reading, writing, listening, thinking, and viewing at the same time, using each skill to develop the others, and discusses both constructivist problem-solving teaching and more explicit systematic instruction. Through both theoretical and research-based rationales, plus extensive practical applications, renowned author Lesley Mandel Morrow presents literacy development as an active process between children and adults to create meaning and real purpose--and helps pre- and in-service teachers grasp the scope and complexity of early literacy development. This comprehensive, balanced approach to literacy teaching and learning covers oral language development, word study, phonological awareness, phonics, comprehension, listening and writing. The reader is provided with a complete picture of early literacy development. Grounded in state-of-the-art research, this book explores how English language learners develop both the oral language and literacy skills necessary for school success. Chapters examine the cognitive bases of English acquisition, and how the process is different for children from alphabetic (such as Spanish) and nonalphabetic (such as Chinese) language backgrounds. The book addresses a key challenge facing educators and clinicians: identifying students whose poor English skills may indicate an underlying impairment, as opposed to still-developing language proficiency. Implications for diagnosis, intervention, and instruction are highlighted throughout.
