Stable Modules and the D(2)-Problem Aug 24 2020 This 2003 book is concerned with two fundamental problems in low-dimensional topology. Firstly, the D(2)-problem, which asks whether cohomology detects dimension, and secondly the realization problem, which asks whether every algebraic 2-complex is geometrically realizable. The author shows that for a large class of fundamental groups these problems are equivalent. Moreover, in the case of finite groups, Professor Johnson develops general methods and gives complete solutions in a number of cases. In particular, he presents a complete treatment of Yoneda extension theory from the viewpoint of derived objects and proves that for groups of period four, two-dimensional homotopy types are parametrized by isomorphism classes of projective modules. This book is carefully written with an eye on the wider context and as such is suitable for graduate students wanting to learn low-dimensional homotopy theory as well as established researchers in the field.

Multicriteria Scheduling Feb 10 2022 Scheduling and multicriteria optimisation theory have been subject, separately, to numerous studies. Since the last fifteen years, multicriteria scheduling problems have been subject to a growing interest. However, a gap between multicriteria scheduling approaches and multicriteria optimisation field exists. This book is a first attempt to collect the elementary of multicriteria optimisation theory and the basic models and algorithms of multicriteria scheduling. It is composed of numerous illustrations, algorithms and examples which may help the reader in understanding the presented concepts.

Algorithm Design: A Methodological Approach - 150 problems and detailed solutions Jun 21 2020 A bestseller in its French edition, this book is original in its construction and its success in the French market demonstrates its appeal. It is based on three principles: (1) An organization of the chapters by families of algorithms: exhaustive search, divide and conquer, etc. On the contrary, there is no chapter devoted only to a systematic exposure of, say, algorithms on strings. Some of these will be found in different chapters. (2) For each family of algorithms, an introduction is given to the mathematical principles and the issues of a rigorous design, with one or two pedagogical examples. (3) For the most part, the book details 150 problems, spanning seven families of algorithms. For each problem, a precise and progressive statement is given. More importantly, a complete solution is detailed, with respect to the design principles that have been presented; often, some classical errors are pointed out. Roughly speaking, two-thirds of the book is devoted to the detailed rational construction of the solutions.

7500+ Objective Questions of SSC Reasoning (Chapterwise & Typewise Questions) 1999 to till date - Bilingual May 13 2022 Whenever a student decides to prepare for any examination, her/his first and foremost curiosity

arises about the type of questions that he/she has to face. This becomes more important in the context of competitive exams where there is a neck-to-neck race. For this purpose, we feel great pleasure to present this book before you. We have made an attempt to provide all competitive exams Reasoning chapter-wise and type-wise questions asked in various SSC, Banks, etc. exams from 1999 to 2020 along with their solutions. Features Chapterwise and type-wise collection of past SSC, Banks, and other competitive exams question papers (1999-2020). Each chapter divides the questions into different types - Type 1, Type2 and Type 3 Solutions have been given with enough diagrams, proper reasoning for better understanding. Students must attempt these questions immediately after they complete the chapter in their class/school/home during their preparation.
