**Adolescence is one of the most fascinating and complex transitions in the human life span. Its breathtaking pace of growth and change is second only to that of infancy. Over the last two decades, the research base in the field of adolescence has had its own growth spurt. New studies have provided fresh insights while theoretical assumptions have changed and matured. This summary of an important 1998 workshop reviews key findings and addresses the most pressing research challenges. For some time now, the study of cognitive development has been far and away the most active discipline within developmental psychology. Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive, 50% seems like a conservative estimate. Hence, a series of scholarly books devoted to work in cognitive development is especially appropriate at this time. The Springer Series in Cognitive Development contains two basic types of books, namely, edited collections of original chapters by several authors, and original volumes written by one author or a small group of authors. The flagship for the Springer Series is a serial publication of the "advances" type, carrying the subtitle Progress in Cognitive Development**

**Research. Each volume in the Progress sequence is strongly thematic, in that it is limited to some well-defined domain of cognitive-developmental research (e. g. , logical and mathematical development, development of learning). All Progress volumes will be edited collections. Editors of such collections, upon consultation with the Series Editor, may elect to have their books published either as contributions to the Progress sequence or as separate volumes. All books written by one author or a small group of authors are being published as separate volumes within the series. A fairly broad definition of cognitive development is being used in the selection of books for this series. The book, with comprehensive and practicable coverage, acquaints its readers with thorough knowledge and skills to help the growing children in their proper growth and development enabling them to reach the limit of their excellence on one hand, and instilling in them the sense of responsibility towards their society and nation on the other hand. It dwells on the essential topics such as nature of the process of growth and development going on at the various ages and developmental stages of children, their developmental needs and characteristics, individual differences and diversities existing among them, development of various abilities and capacities like intelligence, creativity, and overall personality characteristics, nature of the age-linked behavioural problems, adjustment and mental health, parenting styles, and methods of dealing with the behavioural problems, adjustment, and stressful conditions of the developing children. The text equips the readers with all what is in**

demand for helping the developing children at this juncture of rapid industrialisation, globalisation, urbanisation, modernisation and economic change. It is primarily designed for the undergraduate students of education and elementary education. **KEY FEATURES** • Incorporates quite advanced topics such as emotional intelligence, use of reflective journals, anecdotal records and narratives as method of understanding child's behaviour, and so on • Includes detailed discussion of theories of child development, theories of learning, theories of intelligence, theories of achievement motivation, theories of creativity, and theories of personality • Offers engaging language and user-friendly mode of discussion • Adequately illustrated with examples, figures and tables • Comprises chapter-end summary for quick glance of the concepts. Using the metaphor of the heroic journey departure, struggle and return the author shows readers the way to psychological and spiritual health.

**Developmental Psychology: A Student's Handbook** is a major textbook that provides an up-to-date account of theory and research in the rapidly-changing field of child development. Margaret Harris and George Butterworth have produced an outstanding volume that includes recent research from Britain, Europe, and the USA. The text is designed for undergraduate students who have little or no prior knowledge of developmental psychology. Key features include: Specially designed textbook features, such as key term definitions, chapter summaries, and annotated further reading sections Over 95 figures and tables, to illustrate principles described in the text Additional boxed material, to add further insight and

**aid understanding Clear, user-friendly layout, to make topics easy to locate The book places developmental psychology in its historical context, tracing the emergence of the field as an independent discipline at the end of the 19th century, and following the radical changes that have occurred in our understanding of children's development since then. The development of the child is covered in sequence: through conception, pre-natal development, birth, infancy, and the pre-school years, to the achievements of the school years, and the changes that occur during adolescence. Each period is addressed in terms of cognitive, social, and linguistic development, including discussion of reading, spelling, and mathematical development. There is also consideration of comparative research concerning the development of cognitive abilities in other primates. Developmental Psychology: A Student's Handbook is essential reading for all undergraduate students of developmental psychology. It will also be of interest to those in education and healthcare studying child development. The author continues the story of his own child abuse, and his experiences being a foster child moving in and out of five different foster homes Readers are provided with an especially clear and coherent understanding of the sequence and underlying processes of child development, and the effective topical organization emphasizes to readers the way in which all of the domains of development relate - physical, cognitive, emotional, and social-throughout the book. Berk revised the book offering readers a heightened emphasis on the interplay between biology and environment, expanded coverage of culture, and an enhanced**

**focus on education, health, and social issues. While carefully considering the complexities of child development, Berk presents classic and emerging theories in an especially clear, engaging writing style, with a multitude of research-based and real-world examples. For anyone working with children, or those in the fields of child development, child psychology and childcare. ? Self-acceptance is recognized in diverse schools of Christian and Eastern theology as well as in various schools of counseling and psychotherapy (e.g., Humanistic, Rational-Emotive Behavior Therapy, Cognitive Behavior Therapy, Acceptance Commitment Therapy) as a major contributor to mental health, life satisfaction and wellness. A review of the professional literature reveals there is no text that spells out how different theologies, theories of personality and approaches to counseling and therapy conceptualize self-acceptance and how this concept is interrelated to other aspects and constructs of spirituality and psychological functioning (e.g., flexibility, mindfulness). Additionally, the field of positive psychology, which studies the character strengths and virtues that help individuals to experience well-being and to flourish, has largely ignored the concept of self-acceptance. This is a new release of the original 1949 edition. Life-Span Development Psychology: Research and Theory covers the issues and problems associated with a life-span conceptualization of developmental psychology. The book discusses the status, issues, and antecedents of life-span developmental psychology; an approach to theory construction in the psychology of development and aging; and models and theories of development. The text also describes**

**the methodology and research strategy in the study of developmental change; the application of multivariate strategies to problems of measuring and structuring long-term change; and the mechanisms required for the operation of perception and recognition. Learning and retention; language; and intellectual abilities are also considered. Developmental psychologists will find the study invaluable. This antiquarian text contains a comprehensive treatise on topological psychology, being a detailed exposition of its principles written by Kurt Lewin. Written in clear, plain language and full of information fundamental to understanding this branch of psychology, this text will be of considerable utility to the student, and it would make for a great addition to collections of allied literature. The chapters of this book include: 'The Present State of Psychology', 'Formulation of Laws and Representations of General Situations', 'Considerations About Representing Life Space', 'Context and Extent of the Psychological Life Space', 'Causal Interconnections in Psychology', etcetera.
