Vehicles use internal networks that are connected to wireless systems. Many cars include internet capabilities, WiFi, bluetooth and more. These are all potential attack vectors that could jeopardize the safety and security of the vehicle. This book teaches you the same techniques used to audit complex IT infrastructures and applies them to modern day vehicles. The book does not require previous knowledge of mechanics but instead focuses more on the computer science areas of attacks. Embedded system research, network analysis and wireless communications are a large focus on developing attacks.
