The first two vols. comprise papers presented at the conference; the souvenir vol. deals with activities of sponsoring organizations; the 3rd vol. will cover invited lectures and discussions. During the 19th century, the engineering of ports and harbours became a large and specialised branch of the profession. This development began in ports in physically difficult locations and may be particularly identified with the growth of the Port of Liverpool. Stimulated by the arrival of ever-larger steamships and the heavy investment in port facilities that they demanded, it spread around much of the world. The opening papers give examples of what could be achieved in antiquity; the following ones set out the advances in design and technology from 1700 to the start of this century - and note some of the failures and recurrent problems. They also illustrate the critical importance of political and economic factors in determining what the engineers achieved. Annotation. Preprints of papers presented at the August 1990 conference in Melbourne covering topics in management and planning, investigation and design, construction and development, marinas and small boat facilities, and dredging and sea level change. No subject index. Acidic paper. Annotation(c) 2003 Book News, Inc., Portland, OR (booknews.com) A major new reference book bringing together wide-ranging expert guidance on coastal engineering, including harbours and estuaries. It covers both traditional engineering topics and the fast developing areas of mathematical modelling and computer simulation. This title includes chapters on: general administrative, nautical, and physical data; cost of dock and harbour systems; harbour construction; dock construction; quay and dock walls and wharfs and their equipment; locks, graving docks and floating docks, and their equipment; dredging and subaqueous rock removal; maritime canals, channel rectification and demarcation, and coast defence.
