The volume is divided into six sections, each one focusing on a specific theme. The content of each section is based on a selection of the best papers (original double blind peer reviewed contributions) presented at the annual conference of the Italian chapter of AIS, which has been held in Rome, Italy in September 2012. This text combines strong theoretical and foundational concepts with a practical real world approach. Grounded in a strong European perspective, it provides balanced and integrative coverage of the full range of interdisciplinary issues within IS, including development, management, environment and technology. It is suitable for both undergraduate and postgraduate students of information systems with a basic knowledge of information technology. In order to run a successful business, today's manager needs to combine business skills with an understanding of information systems and the opportunities and benefits that they bring to an organisation. Starting from basic concepts, this book provides a comprehensive and accessible guide to: understanding the technology of business information systems; choosing the right information system for an organisation; developing and managing an efficient business information system; employing information systems strategically to achieve organisational goals. Taking a problem-solving approach, Business Information Systems looks at information systems theory within the context of the most recent business and technological advances. This thoroughly revised new edition has updated and expanded coverage of contemporary key topics such as: Web 2.0 enterprise systems implementation and design of IS strategy outsourcing Business Information Systems does not assume any prior knowledge of IS or ICT, and new concepts are simply defined. New business examples, case studies and web links are fully integrated throughout, illustrating the relevance and impact of information systems in today's business environment. In addition there are a wealth of questions and exercises both in the book and online at [www.pearsoned.co.uk/bis](http://www.pearsoned.co.uk/bis) enabling students to test their understanding of key topics and issues. This book is ideal for students on any courses related to business information systems or management information systems at undergraduate or postgraduate level. About the authors Andrew Greasley lectures in Information Systems, Operations Management and Simulation Modelling at Aston Business School, Aston University. Paul Bocij is a Senior Teaching Fellow at Aston Business School. An experienced educator, he has worked for a wide variety of institutions, including universities, colleges and numerous commercial organisations. His commercial experience includes time spent in the fields of programming, management, training and consultancy. Simon Hickie has worked for 20 years as a senior lecturer in business information systems, having previously worked for 10 years in the management information systems field in a variety of roles including programmer, project manager and trainer. His particular interests lie in the areas of information systems in SMEs, change management and strategic information systems management. This core textbook provides a comprehensive and focused introduction for business students to the application of IS in organisations, using a systems-theory approach, with extensive examples, case studies and online videos to bring the topic alive. Terminology is admirably clear and topics are interconnected so that students get a sense of the whole, not a series of isolated issues. This new edition of Business Information Systems hones the framework and approach developed in the first edition, retaining its best features and making improvements to aid student engagement and learning. Written by a highly experienced lecturer and researcher, this will be essential reading for undergraduate, postgraduate and MBA students taking modules in information management systems in business. In Learning with Information Systems the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries. In this book the authors introduce and explain many methods and models for the development of Information Systems (IS). It was written in large part to aid designers in designing successful devices/systems to match user needs in the field. Chief among these are website development, usability evaluation, quality evaluation and success assessment. The book provides great detail in order to assist readers' comprehension and understanding of both novel and refined methodologies by presenting, describing, explaining and illustrating their basics and working mechanics. Furthermore, this book presents many traditional methods and methodologies in an effort to make up a comprehensive volume on High Level Models and Methodologies for Information Systems. The target audience for this book is anyone interested in conducting research in IS planning and development. The book represents a main source of theory and practice of IS methods and methodologies applied to these realities. The book will appeal to a range of professions that are involved in planning and building the information systems, for example information technologists, information systems developers, as well as Web designers and developers—both researchers and practitioners; as a consequence, this book represents a genuinely multi-disciplinary approach to the field of IS methods and methodologies. This book constitutes the refereed proceedings of the 13th International Conference on Mobile Web and Intelligent Information Systems, MobiVIS 2016, held in Vienna, Austria, in August 2016. This volume contains the proceedings of the Second International Conference on Advances in Information Systems (ADVIS) held in Izmir, Turkey, 23-25 October 2002. This conference was dedicated to the memory of Prof. Esen Ozkarahan. He was a great researcher who made an essential contribution to the development of information systems. Prof. Ozkarahan was one of the pioneers of database machine research and database systems in Turkey. This conference was organized by the Computer Engineering department of Dokuz Eylul University in Izmir. This department was established in 1994 by Prof. Ozkarahan and he worked there for the last 27 years of his life. The main goal of the conference was to bring together researchers from all around the world working in different areas of information systems, to share new ideas and present their latest results. This time we received 94 submissions from 27 countries. The program committee selected 40 papers for presentation at the conference. During the conference a workshop was organized on the topic "New Information Technologies in Education". The invited and accepted contributions cover a large variety of topics: general aspects of information systems, databases and data warehouses, information retrieval, multiagent systems and technologies, distributed and parallel computing, evolutionary algorithms and system programming, and new information technologies in education. The success of the conference was dependent upon the hard work of a large number of people. We gratefully acknowledge the members of the Program Committee who helped to coordinate the process of refereeing all submitted papers. This three-volume collection, titled Enterprise Information Systems: Concepts, Methodologies, Tools and Applications, provides a complete assessment of the latest developments in enterprise information systems research, including development, design, and emerging methodologies. Experts in the field cover all aspects of enterprise resource planning (ERP), e-commerce, and organizational, social and technological implications of enterprise information systems. The goal of this book is to provide information systems professionals and academicians with a human factors orientation and practical guidelines relating to human factors issues. It is also intended for use as a textbook for graduate-level students. Researchers and practitioners alike understand that information systems success is very much dependent on incorporating good human factors into system design. The general introduction serves as a position treatise for the study of human factors in information systems. The disciplines of computer science, information systems, human factors engineering, and computer human interaction (CHI) are explored as contributing fields to human factors in IS (HFIS). The goal of this introduction is to differentiate HFIS from the contributing disciplines and to discuss overlapping issues and topics of focus to be addressed later in the text. This book defines an agenda for research in information management and systems for media and entertainment industries. This book constitutes the thoroughly refereed postproceedings of the Second International Workshop on Databases, Information Systems, and Peer-to-Peer Computing, DBISP2P 2004, held in Toronto, Canada in August 2004 in conjunction with VLDB 2004. The 14 revised full papers presented together with an invited keynote paper were carefully selected during two rounds of reviewing and improvement. The papers are organized in topical sections on query routing and processing, similarity search in P2P networks, adaptive P2P networks, and information sharing and optimization. This book presents the current state of research in information systems and digital transformation. Due to the global trend of digitalization and the impact of the Covid 19 pandemic, the need for innovative, high-quality research on information systems is higher than ever. In this context, the book covers a wide range of topics, such as digital innovation, business analytics, artificial intelligence, and IT strategy, which affect companies, individuals, and societies. This volume gathers the revised and peer-reviewed papers on the topic "Technology" presented at the International Conference on Information Systems, held at the University of Duisburg-Essen in 2021. Managing and Using Information Systems: A Strategic Approach, Sixth Edition, conveys the insights and knowledge MBA students need to become knowledgeable and active participants in information systems decisions. This text is written to help managers begin to form a point of view of how information systems will help, hinder, and create opportunities for their organizations. It is intended to provide a solid foundation of basic concepts relevant to using and managing information. Business information systems and business information technology are integral aspects of modern business, and managers in these areas are now expected to have knowledge of human and managerial issues, as well as technical ones. This concise and readable book is a level-by-level primer that addresses the core subjects in business information systems and business information technology to enhance students' understanding of the key areas. Each chapter begins with a case study and features at the end: a summary of major points, glossary of terms, suggested further reading and student activities. Some areas covered include: Different functional areas of business, including accounting, HRM and marketing Development and implementation of information systems Methods to support the analysis and design of policy and practice Strategic management to align information technology with organizational needs Covering the subject matter in a highly accessible manner, this is an ideal text for both undergraduate and masters students on business information systems, business information technology and business information management courses. This text is supplemented with over 900 detailed powerpoint slides for instructors, accessible via the Routledge Instructor Resource page at <http://cw.routledge.com/textbooks/instructor/download/> This new book takes a holistic view of information architecture to offer information professionals a vital critical analysis of library and information service architecture with discussion of methods, tools, techniques, and trends. The editors argue that library assessment literature has primarily dealt with performance measurement and change management strategies, leaving little on the ways of looking at the process architecture of library and information services and on methods for business process analysis. Information Systems: Process and practice aims to fill that gap with a combination of theory and supporting case studies, written by an international line-up of contributors. This book: discusses research and methods that help libraries and information services work from strategic business objectives through to the organisation of processes that support the information services offered opens a new area of research/investigation on the link between information behaviour research and information systems and architecture, illustrated by case studies and projects uses introductory sections and chapter commentary from the editors to draw the discussions together. This will be essential reading for researchers in Information Science, specifically in the areas of digital libraries, information architecture and information systems. It will also be useful for practitioners and students in these areas seeking to understand research issues and challenges and to discover how they have been handled in practice elsewhere. This volume features a collection of papers on emerging concepts, significant insights, novel approaches and ideas in information systems development (ISD). It examines advances in ISD in general and investigates emerging trends that will shape the ISD research agenda beyond 2020. The book gathers selected papers from the 28th International Conference on Information Systems Development held in Toulon, France on August 28-30, 2019. The revised and extended papers explore the mutual influences between information systems and organizational structures, processes and people, and promote research into methodological issues and ways in which the IS designers and developers are transforming organizations and society through information systems. Chapter "Smart Grid Challenges through the lens of the European General Data Protection Regulation" is available open access under a Creative Commons Attribution 4.0 International License via [link.springer.com](http://link.springer.com) Computing Handbook, Third Edition: Information Systems and Information Technology demonstrates the richness and breadth of the IS and IT disciplines. The second volume of this popular handbook explores their close links to the practice of using, managing, and developing IT-based solutions to advance the goals of modern organizational environments. Established leading experts and influential young researchers present introductions to the current status and future directions of research and give in-depth perspectives on the contributions of academic research to the practice of IS and IT development, use, and management Like the first volume, this second volume describes what occurs in research laboratories, educational institutions, and public and private organizations to advance the effective development and use of computers and computing in today's world. Research-level survey articles provide deep insights into the computing discipline, enabling readers to understand the principles and practices that drive computing education, research, and development in the twenty-first century. Assuming no prior knowledge of IS or IT, this book explains new concepts and terms as simply as possible. The importance of information in developing a company business strategy and assisting decision making is explained in this study volume. Information, Systems and Information Systems making sense of the field Peter Checkland and Sue Holwell Lancaster University, UK Science-based technology helps to shape our lives, and no technology is more powerful in this respect than that associated with information. But the emerging linked fields of information systems and information technology are still in a very confused state. There is a torrent of technical developments but the concepts which bring structure to the field and make sense of it lag behind. This book seeks to dispel that confusion, and aims to make sense of IS and IT as a whole. Conventional theory bears little relation to the experience most people have with computer-based systems in organizations. Based on real-world experiences in both the private and public sectors, this book from Peter Checkland and Sue Holwell tackles the subject afresh. Information, Systems and Information Systems provides a practice-based approach to the thinking needed to underpin provision of information support in organizations. Starting from fundamentals, the book develops a coherent account of the field. The book is thus a work of conceptual cleansing. It presents a well-argued and tested account of IS and IT which is both holistic and coherent. The sense-making models which emerge can encompass any particular assumptions about the nature of organizational reality and management, whether 'hard' functionalist or 'soft' interpretive ones, though the authors' sympathies are with the latter. The overall mission of this book is to provide a comprehensive understanding and coverage of the various theories and models used in IS research. Specifically, it aims to focus on the following key objectives: To describe the various theories and models applicable to studying IS/IT management issues. To outline and describe, for each of the various theories and models, independent and dependent constructs, reference discipline/originating area, originating author(s), seminal articles, level of analysis (i.e. firm, individual, industry) and links with other theories. To provide a critical review/meta-analysis of IS/IT management articles that have used a particular theory/model. To discuss how a theory can be used to better understand how information systems can be effectively deployed in today's digital world. This book contributes to our understanding of a number of theories and models. The theoretical contribution of this book is that it analyzes and synthesizes the relevant literature in order to enhance knowledge of IS theories and models from various perspectives. To cater to the information needs of a diverse spectrum of readers, this book is structured into two volumes, with each volume further broken down into two sections. The first section of Volume 1 presents detailed descriptions of a set of theories centered around the IS lifecycle, including the Success Model, Technology Acceptance Model, User Resistance Theories, and four others. The second section of Volume 1 contains strategic and economic theories, including a Resource-Based View, Theory of Slack Resources, Portfolio Theory, Discrepancy Theory Models, and eleven others. The first section of Volume 2 concerns socio-psychological theories. These include Personal Construct Theory, Psychological Ownership, Transactive Memory, Language-Action Approach, and nine others. The second section of Volume 2 deals with methodological theories, including Critical Realism, Grounded Theory, Narrative Inquiry, Work System Method, and four others. Together, these theories provide a rich tapestry of knowledge around the use of theory in IS research. Since most of these theories are from contributing disciplines, they provide a window into the world of external thought leadership. The ItAIS (<http://www.itaais.org>) is the Italian chapter of the Association for Information Systems (AIS: <http://www.aisnet.org>) which brings together both individual and institutional members. The Italian chapter has been established in 2003, and since then, it has promoted the exchange of ideas, experiences and knowledge among academics and professionals in Italy, devoted to the development, management, organization and use of Information Systems. The contents of this book are based on a selection of the best papers presented at the Annual Conference of the ItAIS, that has been held in Paris, in December 2008. The book adopts an interdisciplinary approach, recognizing the need to harness a number of different disciplines in both the theory and the practice of information systems. The work here presented is comprehensive and up-to-date in this subject. The contributions to this volume aim to disseminate academic knowledge and might be particularly relevant to practitioners in the field. This book contains a selection of articles from The 2013 World Conference on Information Systems and Technologies (WorldCIST'13), a global forum for researchers and practitioners to present and discuss the most recent innovations, trends, results, experiences and concerns in the several perspectives of Information Systems and Technologies. The main topics covered are: Information and Knowledge Management; Organizational Models and Information Systems; Intelligent and Decision Support Systems; Software Systems, Architectures, Applications and Tools; Computer Networks, Mobility and Pervasive Systems; Radar Technologies; and Human-Computer Interaction. This book contains the collection of full papers accepted at the 11th International Conference on Enterprise Information Systems (ICEIS 2009), organized by the Institute for Systems and Technologies of Information Control and Communication (INSTICC) in cooperation with the Association for Advancement of Artificial Intelligence (AAAI) and ACM SIGMIS (SIG on Management Information Systems), and technically co-sponsored by the Japanese IEICE SWIM (SIG on Software Enterprise Modeling) and the Workflow Management Coalition (WfMC). ICEIS 2009 was held in Milan, Italy. This conference has grown to become a major point of contact between research scientists, engineers and practitioners in the area of business applications of information systems. This year, five simultaneous tracks were held, covering different aspects related to enterprise computing, including: "Databases and Information Systems Integration," "Artificial Intelligence and Decision Support Systems," "Information Systems Analysis and Specification," "Software Agents and Internet Computing" and "Human-Computer Interaction". All tracks describe research work that is often oriented toward real-world applications and highlight the benefits of information systems and technology for industry and services, thus making a bridge between academia and enterprise. ICEIS 2009 received 644 paper submissions from 70 countries in all continents; 81 papers were published and presented as full papers, i.e., completed research work (8 pages/30-minute oral presentation). Additional papers accepted at ICEIS, including short papers and posters, were published in the regular conference proceedings. As such, it addresses the needs of both professors and researchers, who are constantly seeking inspiration, and of managers seeking to tap the potential of the latest trends to take their business to the next level. Readers will find answers to pressing questions that arise in their daily work. This book features a selection of articles from The 2019 International Conference on Information Technology & Systems (ICITS'19), held at the Universidad de Las Fuerzas Armadas, in Quito, Ecuador, on 6th to 8th February 2019. ICIST is a global forum for researchers and practitioners to present and discuss recent findings and innovations, current trends, professional experiences and challenges of modern information technology and systems research, together with their technological development and applications. The main topics covered are: information and knowledge management; organizational models and information systems; software and systems modeling; software systems, architectures, applications and tools; multimedia systems and applications; computer networks, mobility and pervasive systems; intelligent and decision support systems; big data analytics and applications; human-computer interaction; ethics, computers & security; health informatics; information technologies in education; cybersecurity and cyber-defense; electromagnetics, sensors and antennas for security. This book is intended as a supplement for courses in Management Information Systems (MIS). It uses cases to explain MIS concepts. It illustrates how computer-based information systems can be used to support an organization's objectives and strategic plans. The book's objective is to capture the material from a wide range of sectors such as health care, developmental activities, bank operations, microfinance, etc. and organize it around a framework that would be useful for students to understand how MIS can help in overcoming corporate challenges. It prepares students as managers, providing a clear focus on information, rather than data, and its use in business. These cases can also be used by practitioners as examples for designing MIS in their own organizations. For each case, the costs and benefits of the information system have been evaluated by calculating the Return on Investment (ROI). What is more, not only quantitative benefits, but also qualitative benefits (social and public benefits) have been identified to justify the need for technology-enabled MIS for supporting corporate strategies and operations. The book would be useful to students of MBA, BE (ICT), MCA and M.Sc. (Computer Science) courses. Besides, it would be of benefit to senior executives participating in Management Development Programmes. This book covers several aspects related to the evolution of Information Systems into Pervasive Information Systems. New IT trends have an important impact on IT infrastructures, which become increasingly heterogeneous, flexible, and dynamic. These new trends are transforming Information Systems into what we call Pervasive Information Systems. The purpose of this book is to combine "state-of-the-art" solutions from various research communities (such as Information Systems Engineering, Cloud Computing, Fog/Edge Computing, Pervasive systems, Distributed systems, and Middleware systems) related to the Pervasive Information Systems emergence as a common point of view. Through these multiple contributions, this book tackles important challenges concerning Information Systems evolution, promoting a holistic view of Pervasive Information System. Pervasive Information Systems (PIS) can be defined as a new class of Information Systems. It can be characterized by an IT that is gradually embedded in the physical environment and can accommodate the user's requirements and desires when necessary. This evolution implies considering Information Systems beyond the organization's physical environment to integrate new technologies transparently, leading to a pervasive environment whose behavior should be more and more reactive & proactive. It corresponds to an important change in Information Systems Engineering.
